

New Generation Air Circuit Breaker IZM

Superior Solutions

To Meet and Exceed The Unique and
Wide-ranging Requirements

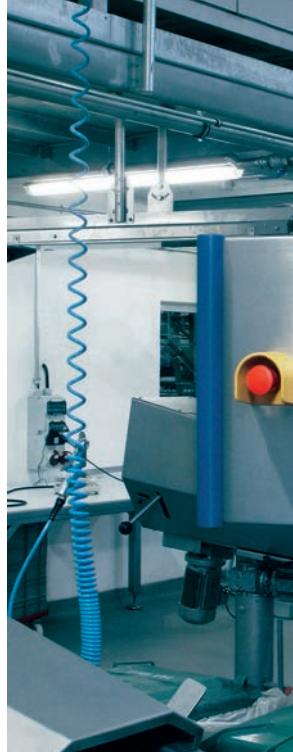

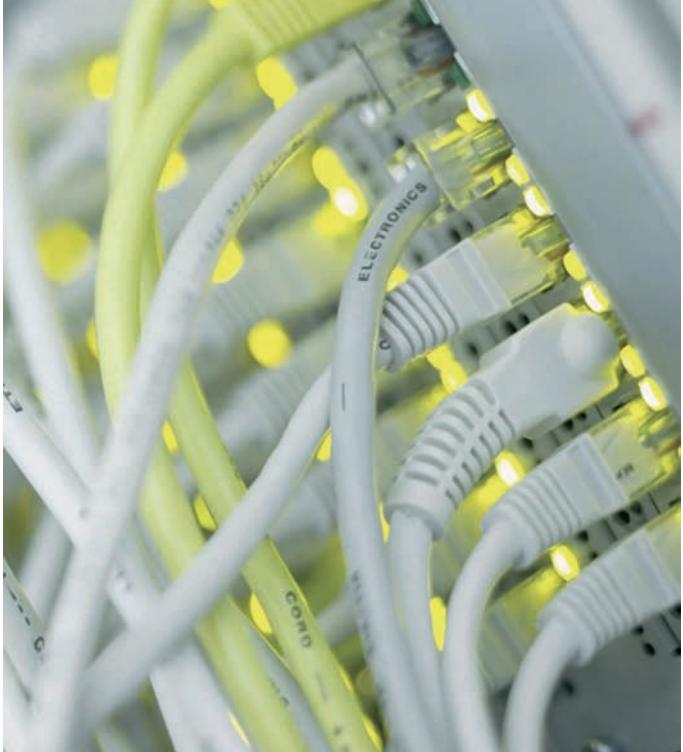

EATON

Powering Business Worldwide

MOELLER 

An Eaton Brand

Powering electrical systems worldwide

Buildings

- Residential
 - Healthcare
 - Education
 - Commercial offices
 - Retail
 - Public sector
 - Airports
-
- Electrical distribution solutions for safe and efficient power delivery
 - Power quality systems for uptime and reliability
 - Power metering and monitoring to add intelligence and save costs
 - Industrial control products for HVAC applications

Information Technology

- Data centers
 - Telecommunication
 - Networks
 - Computer rooms
-
- World's most efficient line of UPSs to reduce footprint and save energy
 - Reliable power systems with inherent redundancy to improve availability
 - Power metering and monitoring to diagnose problems and lower costs
 - Local service and support for quick response

Public and private sectors

Buildings, Information Technology, Industrial & Machinery, Energy & Utilities
We provide reliable, efficient and safe power management.

Industrial & Machinery

- Machine building:
 - Food and packaging machines
 - Woodworking and processing machines
 - Agriculture
 - Construction
 - Mining and metals
 - Paper industry
 - Chemical and pharmaceutical industry
 - Automotive industry
 - Logistics centers
-
- Electrical distribution equipment to deliver power throughout the enterprise
 - Control & automation and power quality equipment for process control
 - Power metering and monitoring to manage energy costs and uptime
 - Power and motion control products to optimize productivity, reliability, safety and operator comfort

Energy & Utilities

- Renewable energy:
 - Solar
 - Wind
 - Hydropower
 - Traditional energy:
 - Oil
 - Gas
 - Smart grid
 - Water and waste water
-
- Electrical balance of system and turnkey services for residential, utility and commercial solar installations
 - Power distribution equipment, control components and system installations services
 - Network power grid technology for intelligent data, lower costs and crew / public safety

Versatile circuit breakers up to 6300 A – for cost-effective, optimized solutions.

The IZMX16 of the NXR series is the smallest air circuit-breaker (ACB) worldwide:
With a volume of only 0.024 m³ and a front surface of only 0.092 m², it is just slightly bigger than the size of a A4 sheet of paper! And all this without any loss in terms of performance.

The innovative concept allows the user to install two circuit breakers side by side in withdrawable design, in a 600 mm wide section. This fact provides for a more cost-effective setup of the section and, in addition, it helps to save operating space. And where remote switching is required, this volume can even accommodate a motor for charging the stored-energy spring mechanism and releases for electrical operation.
High performance combined with reduced space is exceptional value to customer.

The IZMX40 of the NXR series is a circuit breaker for up to 4000 A with depth less than 400mm for the drawout version, without the need to install any additional "copper mines" in the connection area.

Tests to integrate it into Eaton switchgear systems, such as Modan, xEnergy, Power Xpert and Capitol 40 confirm its outstanding technical data and optimal compatibility thanks to the flexible connection system.

The modular structure, integrated solutions as well as a complete range of accessories and additional functions make it easy to adapt the circuit breaker to any of the required applications. Optionally it can be configured right at the factory – without any extra cost for additional installation work at the circuit breaker.

An IZM99 circuit breaker can be produced in a simplified manner by assembling 2 circuit breakers together. Therefore, IZM99 breakers are equipped with 2 wiring terminals for each phase on the incoming and outgoing sides.

This can facilitate heat dissipation of power distribution cabinets and simplify production in some distribution cabinets, and reduce the number of different bus adapter models.

- Phase sequence of IZM99: (NN)
AABBCC
- 6300A IZM99 circuit breaker:
horizontal wiring is supplied as standard, thus simplifying the busbar connection in the switchgear system

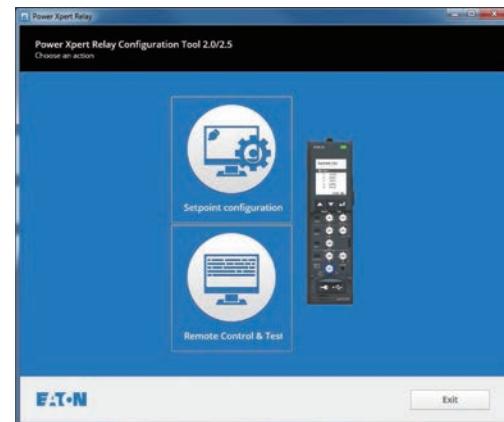

Horizontal Terminal

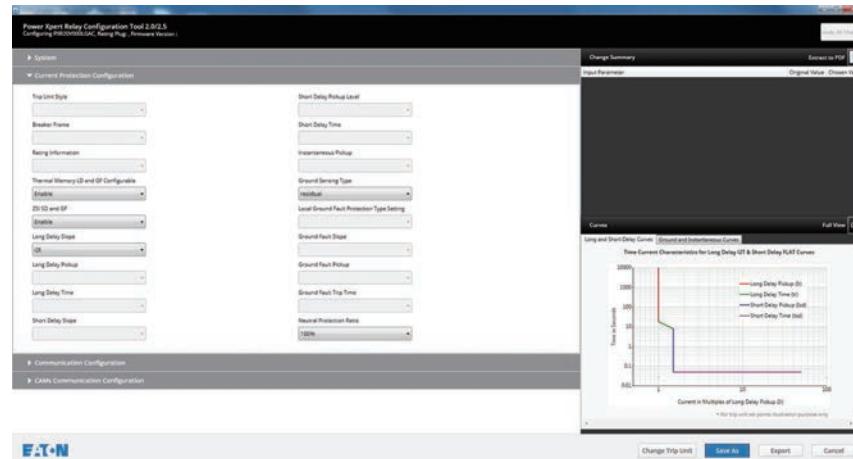

Vertical Terminal
(Available on B, N
and H type.
E type can be
configured as
horizontal terminal
only)

The next generation trip unit platform: Power Xpert Release (PXR)

- LCD display with multilingual capability
- Current metering on PXR20 and power metering on PXR25
- Extended range for pickup value and delay timing setting
- "OFF" setting available for ground fault(G) and non-delayed instantaneous trip(I)
- Onboard Modbus communication (standard on PXR25 and optional on PXR20)
- MicroUSB for computer connection
- PXR Configuration and Test Tool to remotely configure and test the trip unit
 - Trip test
 - Waveform capture
 - Diagnostics
 - Long trip curve setting
 - ZSI/Thermal Memory on/off

PXR Trip Unit

Arcflash Reduction Maintenance System™

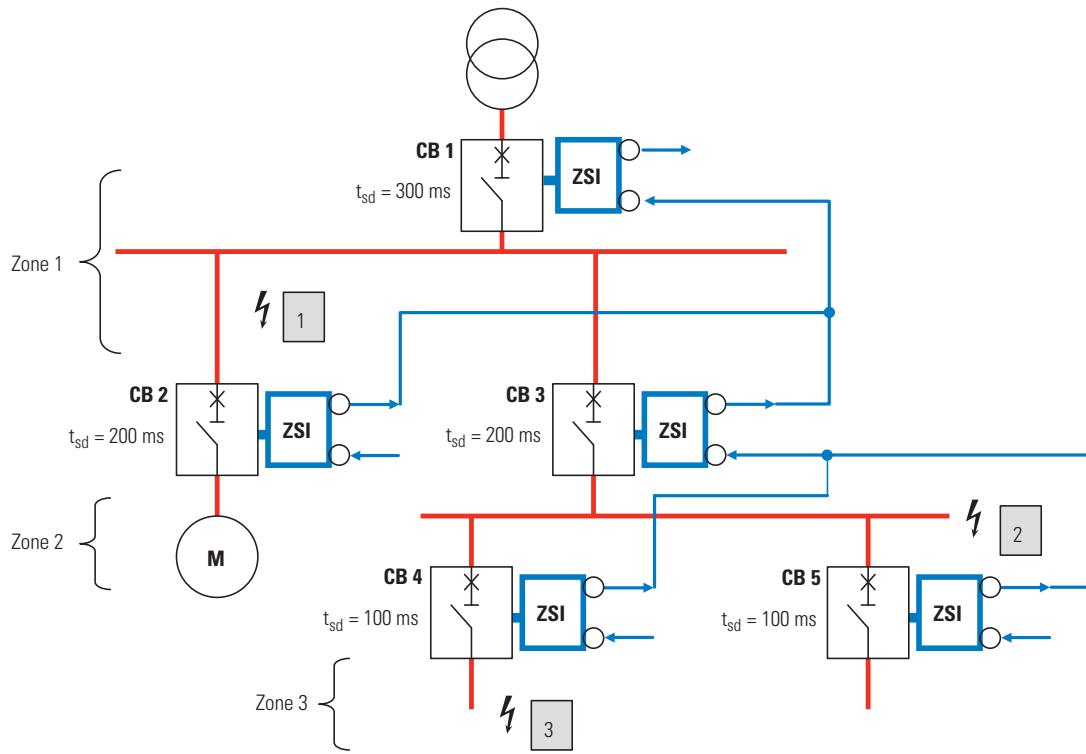

Eaton's patented Arcflash Reduction Maintenance System technology provides maintenance staff improved safety of downstream maintenance locations using a simple and reliable method to reduce fault clearing times and energy in an arc flash event (radiation, sound, pressure, temperature).

Arcflash Reduction Maintenance System uses a separate analog trip circuit providing faster signal processing and interruption times than the standard (digital) "instantaneous" protection.

The Arcflash Reduction Maintenance System function is activated either directly on the circuit breaker through a local switch or remotely through communications or a contact input.

Arcflash Reduction Maintenance System is optional on both PXR20 and PXR25 trip units.

IZM Series Air Circuit Breakers

Zone Selective Interlocking

- Zone Selective Interlocking (ZSI) is described in the soon to be published standard IEC 61912-2 Low voltage switchgear and controlgear.
- The term zone selective interlocking is used to describe a method of controlling circuit breakers to provide selectivity with very short interruption times for the breaker closest to the fault.
- There are different levels (zones) of protection that isolate the fault in the distribution system.
- ZSI may be applied for faults between phases or earth-faults or both.
- ZSI is applied to the short time faults where time selectivity can be achieved with the breakers between the zones.
- Because ZSI does not require auxiliary power or additional modules to operate set up time is minimal and application is easy.

Zone Selective Interlocking Example

Example A – Short-circuit at position 3

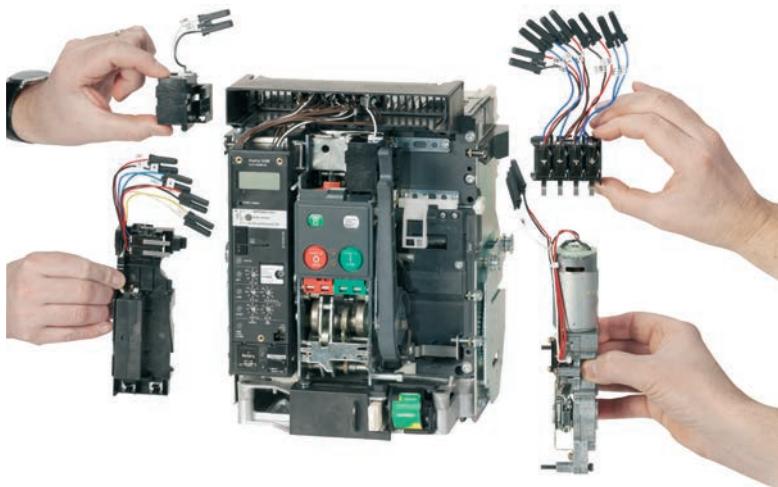

- Circuit-breakers CB1, CB3, CB4 all see the short circuit current and register a short delay pick-up.
- Circuit breaker CB4 sends a ZSI out-put blocking signal to CB3 ZSI input. CB3 sends a ZSI output blocking signal to CB1 ZSI input. CB1 sends a ZSI output signal that is not wired. This signal could be wired to a MV relay on the other side of the trans-former with a compatible ZSI cir-cuity.
- CB1 registers the ZSI input signal and starts its timer for 300ms. CB3 registers the ZSI input signal and starts its timer for 200ms. CB4 gets no input from any lower zone circuit breaker. This breaker will then trip immediately without any time delay. CB4 interrupts the fault and CB1 and CB3 stop short delay timing because the fault current is gone.
- If for some reason CB4 does not open and interrupt the fault then at the end of the its short delay time CB3 will open and interrupt the fault.

Example B – Short-circuit at position 2

- Circuit-breakers CB1, CB3, see the short circuit current and register a short delay pick-up. CB4 and CB5 do not see the fault current and do not send a ZSI output.
- Circuit breaker CB3 sends a ZSI out-put blocking signal to CB1 ZSI input. CB1 sends a ZSI output signal. In this example that signal is not wired.
- CB1 registers the ZSI input signal and starts a timer for 300ms. CB3 gets no input from any lower zone circuit breaker. This breaker will then trip immediately without any time delay. CB3 interrupts the fault and CB1 stops short delay timing because the fault current is gone. The clearance time is reduced by approximately 150ms.

Example C – Short-circuit at position 1

- Only Circuit breaker CB1 sees the short circuit current and registers a short delay pick-up. CB2, CB3, CB4 and CB5 do not see the fault current and do not send ZSI outputs.
- CB1 sends a ZSI output signal. In this example that signal is not wired.
- CB1 gets no input from any lower zone circuit breaker. This breaker will then trip immediately without any time delay. CB1 interrupts the fault and the clearance time is reduced by approximately 250ms.

Breaker rear side (withdrawable breaker)

Space-saving circuit-breakers with useful accessories

Eaton Introduces IZM Series

The new IZMX Series from Eaton is a new series of air circuit-breakers with an extensive range of accessories. The new range provides users with two compact frame sizes up to 4000A, modular design, common accessories, easy to integrate communications and a full range of trip units including the new powerful Power Xpert Release(PXR) trip unit with a LCD display. The innovative concept of the **IZMX16** makes it possible to install two with-drawable circuitbreakers in a 600 mm wide section. This enables more eco-nomical section design and also saves operating space. The compact modu-lar design of the **IZMX40** offers customers a full range of high performance ratings in a single frame size simplifying the integration process into panel boards and switch boards. **IZMX Series**, a new generation and new standard in circuit protection.

Eaton's IZM99, circuit-breakers offer a proven and complete range of air circuit-breakers up to 6300 A. Four sizes enable the ideal circuit-breaker to be selected economically for any project. In this way, only the module width increases with the required rated operational current, enabling the most compact and economical size to be selected.

Applications

The circuit breakers can be used in four main application areas depending on the type of equipment to be protected:

- System protection
- Motor protection
- Transformer protection
- Generator protection

These key applications make different demands on the switches, which are met with a range of control units.

Switches with closing release

They are particularly suitable for synchronization tasks.

Coupler switches

In addition to the circuit-breakers, switch-disconnectors are also available. These are used, for example, as coupler switches between different power supplies. The switch-disconnectors are used as coupler switches for different sections of a network in conjunction with our automatic network switching device.

Modular Design, Common Accessories

The retrofitting of accessories is made considerably easy thanks to the efficient "plug & work" technology. Accessory drawers and snap-fit mechanisms make it possible to fit the latest accessories with virtually no tools. This flexibility allows you to respond easily to changing requirements within your system. Most accessories for IZMX Series are common to both the compact and standard frame sizes.

Standard scope of delivery

- With the new IZM Series range, you select a basic device that is already fitted with an electronic release.
- The standard mounting for both frames is on a horizontal mounting plate or on horizontal traverses in the switching cabinet. The IZMX16 can also be fastened to vertical mounting plates.
- With four-pole devices, the neutral conductor is arranged on the left (front view).
- The neutral conductor can be loaded 100% like the phase conductors.
- The circuit-breakers are provided with a standard mechanical reclosing lockout. After an overload trip, the fault is usually examined first. After the fault is identified and rectified, the mechanical reclosing lock-out is reset by pressing the red mechanical trip indicator on the front of the circuit-breaker.
- A "remote-reset" feature and an "automatic reset" are offered as additional ordering options. The remote reset enables resetting the

breaker after an over current trip via a control voltage. The automatic reset option enables the circuit breaker to be restored to normal operation immediately after an over current trip (i.e. there is no mechanical reclosing lockout). In these applications compulsory fault analysis is intentionally avoided.

- The number of secondary control cable terminals depends on the accessories fitted.
- If a cassette is ordered without the basic device, this can be already fitted with the maximum number of control cable terminals. For greater economy in large plants, the cassette is also offered without control circuit terminals so that fitting can be carried out later at the installation or when accessories are required at a later time.

• The withdrawable basic device includes the primary finger clusters and levering-in mechanism. NOTE: Some manufacturers mount the primary finger clusters inside the cassette cell, which requiring shutdown of the panel board for inspection and maintenance.

- 2 changeover contacts are provided as standard for ON/OFF status indication.
- A coding mechanism between the basic device and the cassette prevents impermissible combinations ("Rejection Interlock").
- The door escutcheon is always included in the scope of delivery. With withdrawable designs this is supplied with the cassette (withdrawable unit).
- On withdrawable units the circuit breaker can be pulled out to inspect the arc chutes. With fixed units, it is recommended that sufficient space is provided above the circuit breaker to enable inspection. An additional cover is not required.
- If a motor operator is ordered, the "Spring-operated stored energy mechanism tensioned" indicator switch is automatically provided.

Additional benefits IZM Series

- Thanks to the separate mounting position, a switching operations counter can now be used also independently of a motor operator.
- Withdrawable unit operation: The unit is actuated with a hand crank supplied as a standard feature and has a secure position in the basic device.
- IZM99 breakers are equipped with 2 wiring terminals for each phase on the incoming and outgoing sides. This can facilitate heat dissipation of power distribution cabinets and simplify production in some distribution cabinets, and reduce the number of different bus adapter models.
- Phase sequence of IZM99: (NN) AABBC.
- 6300A IZM99 circuit breaker: horizontal wiring is supplied as standard, thus simplifying the busbar connection in the switchgear system.

External 24 V supply

- The standard protection functions of IZMX Series operate independently of an external control voltage supply. The power supply of the electronics unit, for example for overload and short-circuit protection, is implemented via the current transformers integrated in the circuit-breaker.
- The universal and power measurement release units with display can be fed with a 24 V DC supply so that the display function can be used without a load. An external 24 V DC power supply is needed if communication functions are required.

IZM Series Air Circuit Breakers

Greater safety for maintenance personnel with ARMS™

Personnel safety is of paramount importance in today's work environment. Of recent concern is the potential for serious injury due to exposure to electrical arcs. Eaton's IZMX Series trip units offer the patented ARMS system (Arcflash Reduction Maintenance System™), which offers a non-delayed immediate disconnection in the event of an arc fault. This disconnection is even faster than that of a non-delayed short-circuit release. This function can be activated directly on the circuit-breaker or via an external switch, such as when maintenance personnel enter a hazardous area.

Major Benefits of ARMS:

- Increased personnel safety – by limiting the available arc flash energy
- Simple to operate
- Enabled with circuit breaker door closed by a door mounted lockable switch
- Enabled only for the time required to perform the desired maintenance work
- Preserves overcurrent coordination under normal conditions
- Reduction in incident energy levels may permit reduced levels of Personal Protective Equipment (PPE), therefore improving worker comfort and mobility

Other components of the ARCON arc fault protection system, in conjunction with Series NRX, enable an expansion of arc fault protection in stages. ARCON on the Internet: www.moeller.net/arcon

Selection criteria for circuit-breakers

Fundamental criteria for the selection of circuit-breakers:

- Max short-circuit current I_k max at the circuit-breaker' point of installation: this value determines the short-circuit breaking capacity or the short-circuit current carrying capacity of the circuit-breaker. It is compared with the I_{cu} , I_{cs} and I_{cw} values of the switch and essentially determines its size (see technical data).
- Rated operational current I_n which should flow through the respective branch circuit: This value must not be greater than the maximum switch rated operational current of the circuit-breaker. The rated operational current can be adjusted down using additional rated operational current modules.
- Ambient temperature of the circuit breaker: This is generally the internal temperature in the control panel. Observe the derating values with increased ambient temperature (see Technical data).
- Circuit-breaker type: fixed mounted or withdrawable units, 3 or 4 pole.
- Minimum short-circuit current, which flows through the switching device: The release must recognize this value as a short-circuit and may react with a trip.
- Protection functions of the circuit breaker: This is determined by the selection of the respective overcurrent release.

For additional resources and tools for selecting Eaton Air Circuit Breakers please visit us as www.eaton.com/seriesnrx.

Communication Options for IZM Series

With the respective communication module - PCAM, MCAM or ECAM (Profibus-DP / Modbus/ Ethernet Communications Adapter Module) - every circuit breaker of the NRX series is equipped for modern communication and is fit for the future. The databus not only allows to transmit information, but also to receive commands/settings.

Onboard Modbus communication is standard on the PXR25 (U type) trip unit and optional on the PXR20(V type) trip unit upon order. Additional PCAM, MCAM or ECAM module can be installed externally for PXR25 to expand the communication capability. (No more than one external CAM module can be installed)

PROFIBUS-DP configuration

Communications module IZMX-PCAM has a 9-pin D-Sub socket for connection to PROFIBUS. The module works as a slave on PROFIBUS-DP; the data is defined through a standardized device master data file, which permits smooth integration of IZMX in a DP line.

- On the PROFIBUS-DP side the module supports automatic baud rate detection; the PROFIBUS-DP bus address is set through the trip unit's display. The maximum cable length is 2.4 km.
- To operate the IZMX-PCAM, a supply voltage of 24 V DC is required.
- The data connection to the circuit-breaker is implemented internally through a serial highspeed data connection.

Data access via PROFIBUS-DP

The data on PROFIBUS-DP are offered according to the profile for low-voltage switchgear (LVSG) of PROFIBUS International (PROFIBUS and PROFINET User Group). Five different data structures with varying numbers of parameters are available through the device master data file. This allows a data filter to be easily implemented, which simplifies integration of the Series NRX data into the control system.

Modbus configuration

Communications module IZMX-MCAM has a plug-in screw terminal for connection to Modbus. The module operates as a Modbus slave.

- Baud rate, data format and address (max. 247) for Modbus are set with the input keys of the trip unit. The maximum cable length is 1.2 km.
- The Modbus must be terminated with a $120\ \Omega$ terminating resistor.
- To operate the IZMX-MCAM, a supply voltage of 24 V DC is required.
- The data connection to the circuit-breaker is implemented internally through a serial highspeed data connection.

Data access via Modbus

The data is contained in comprehensive data tables. Each data point is available as floating-point (IEEE) or fixed-point value. This variance allows the integration of the IZMX to be adapted to the Modbus architecture. This enables a simple means of implementing a data filter, which facilitates the integration of IZMX data in the control system.

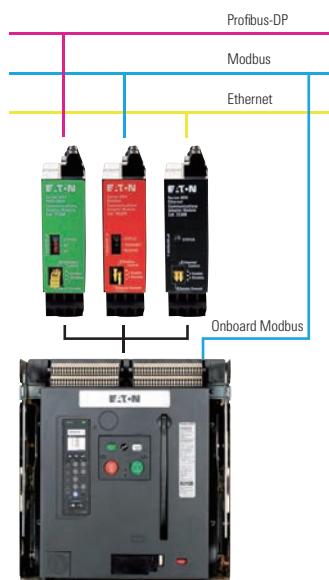

Ethernet configuration

has standard RJ45 socket for connection to Ethernet. This module has a configured web server on board and supports Simple Network Mail Protocol (SNMP) for alarm or event notifications.

- IP address and related parameters are set through the trip unit's display.
- The data connection to the circuit-breaker is implemented internally through a serial high speed data connection.
- To operate the IZMX-ECAM, a supply voltage of 24 V DC is required.

Data access via Ethernet

The data is contained in different web pages structured according to the topics „Data View“, „Alarms“, „Logs“ and „Configuration“. This variance allows the integration of the IZMX to be adapted to all Ethernet networks supporting http protocol. An „around the world access“ to the breaker becomes reality and using the SNMP protocol alarm messages can be transported everywhere.

Power supply requirement	+24 V DC, optional	+24 V DC, optional
Additional funtions		
Test Capability	Integral	Integral
Maintenance Mode ARMS (Arc Flash Reduction Maintenance System™)	○	○
Trip log	●	●
Electronic operations counter	●	●
Waveform capture	●	●
Breaker health monitor	●	●

Notes ¹⁾ 0.1s: trip time is 0.06s to 0.1s; 0s: nominal clear time is 60ms with auxiliary power and 120ms without.

²⁾ Requires external 24VDC control voltage supply when continuous current below 20% of I_n

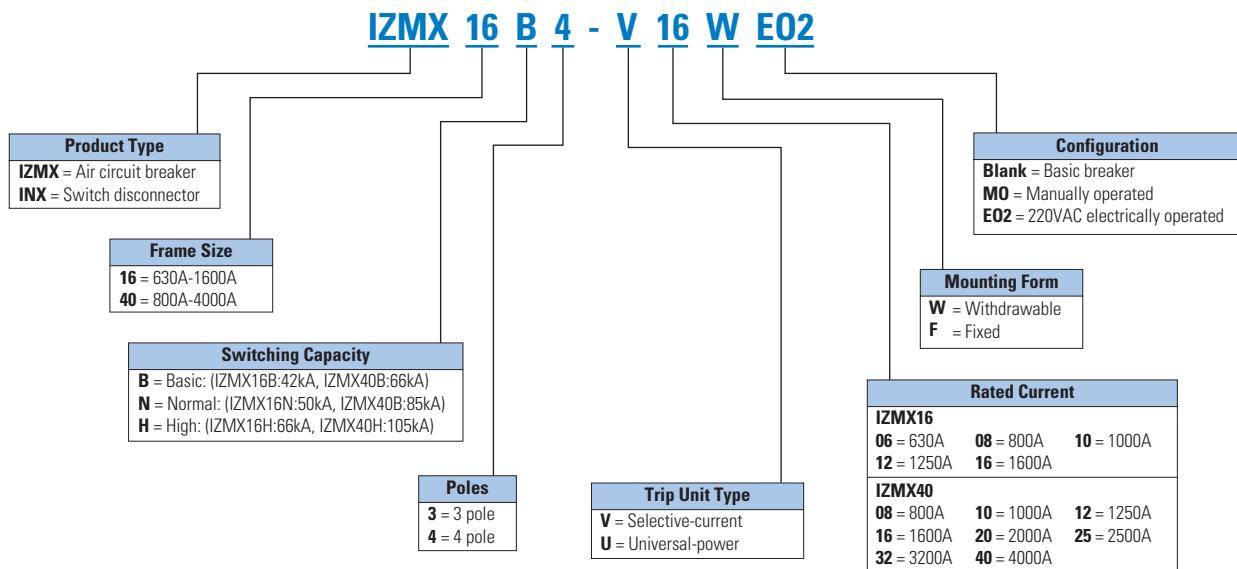

³⁾ Requires external PT module(IZMX-PXR-PTM-2) for voltage sensing input to trip unit

● Standard

○ Optional

— not available

IZMX Series Air Circuit Breakers Catalog Number

Recommended Selection Examples

IZMX40 fixed 220VAC electrically operated example (item 1-2 for manually operated MO):

- ① IZMX40B3-V16F Fixed parent breaker, including 2a2b Aux contact
- ② IZMX-THV403-3200-2 Main terminal adapter – horizontal (3200A and below)
- ③ +IZMX-M40-230AD 208-250 VAC/DC Charging motor
- ④ +IZMX-ST230AD 220-240 VAC/DC Shunt trip
- ⑤ +IZMX-SR230AD 220-240 VAC/DC Closing spring release
- ⑥ +IZMX-AS22 Additional 2a2b Aux contact (4a4b total)
- ⑦ +IZMX-OTS Over current trip switch(OTS) 2CO
- ⑧ EASY400-POW-CN External power module to converter 220VAC to 24VDC to power trip unit

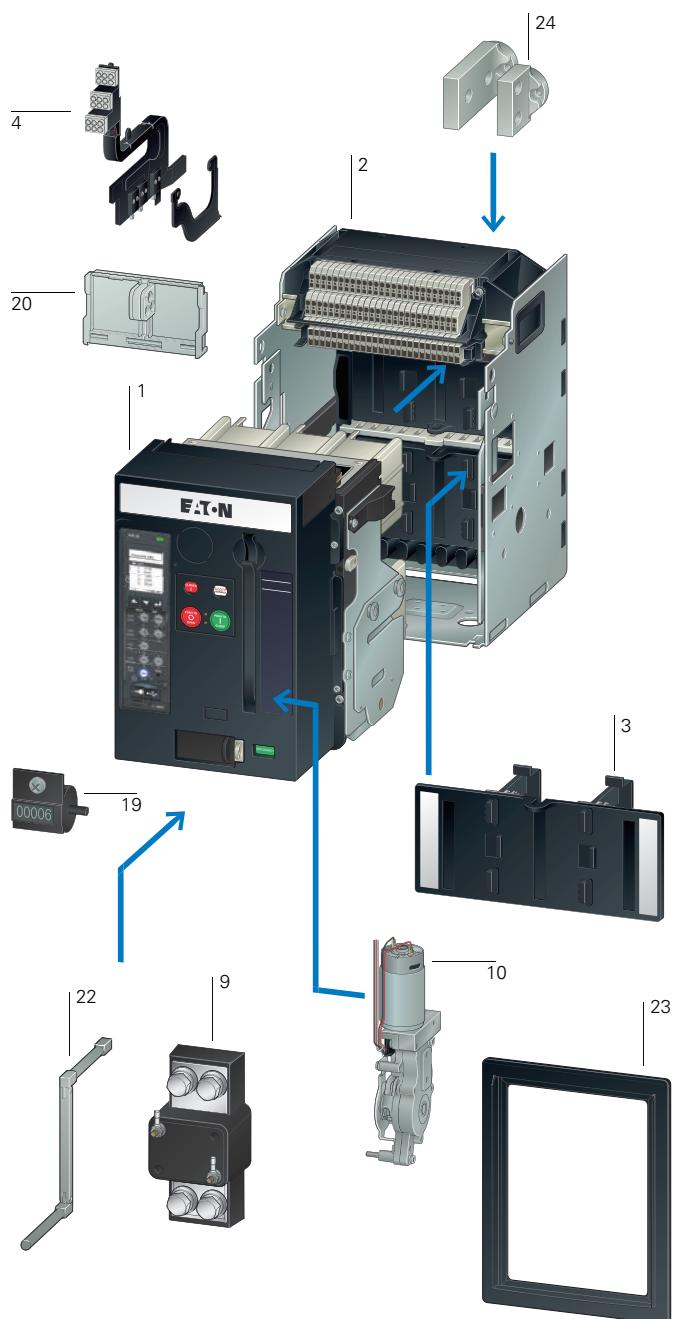

IZMX40 withdrawable 220VAC electrically operated EO2 example (item 1-4 for manually operated MO):

- ① IZMX40B3-U16W Withdrawable parent breaker, including 2a2b Aux contact
- ② +IZMX-CAS403-2000 Cassette(2000A and below)
- ③ +IZMX-SH403 Safety shutters
- ④ IZMX-THV403-3200-2 Main terminal adapter – horizontal (3200A and below)
- ⑤ +IZMX-M40-230AD 208-250 VAC/DC Charging motor
- ⑥ +IZMX-ST230AD 220-240 VAC/DC Shunt trip
- ⑦ +IZMX-SR230AD 220-240 VAC/DC Closing spring release
- ⑧ +IZMX-AS22 Additional 2a2b Aux contact (4a4b total)
- ⑨ +IZMX-OTS Over current trip switch(OTS) 2CO
- ⑩ EASY400-POW-CN External power module to converter 220VAC to 24VDC to power trip unit

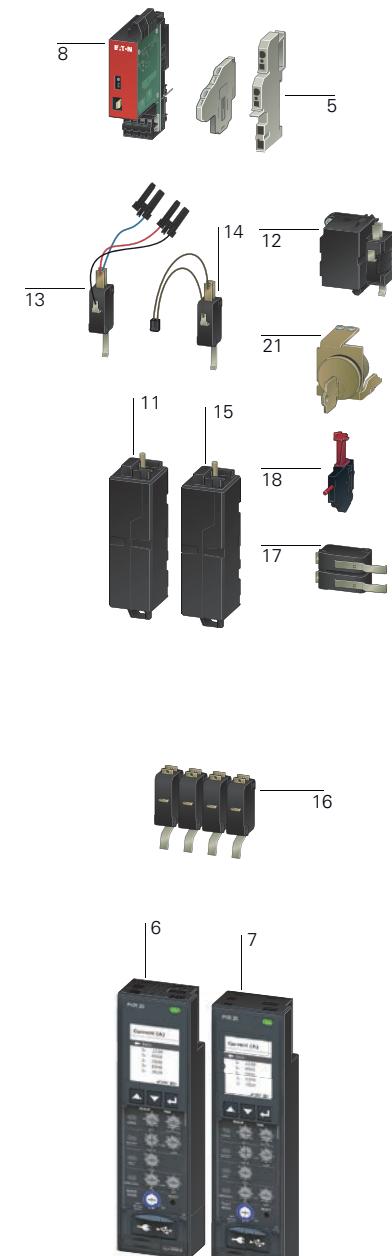

IZMX Series Air Circuit Breakers

IZMX system overview

IZMX16

Unique parts and accessories for -IZMX16

Interchangeable accessories between IZMX16 and IZMX40

1 IZMX Circuit-breaker

IZMX16: 630 - 1600A
IZMX40: 800 - 4000A

2 Cassette

- +IZMX-CAS163-1600 X16, 1600A, 3P
- +IZMX-CAS164-1600 X16, 1600A, 4P
- +IZMX-CAS163-2000 X40, 2000A, 3P
- +IZMX-CAS164-2000 X40, 2000A, 4P
- +IZMX-CAS403-2500 X40, 2500A, 3P
- +IZMX-CAS404-2500 X40, 2500A, 4P
- +IZMX-CAS403-3200 X40, 3200A, 3P
- +IZMX-CAS404-3200 X40, 3200A, 4P
- +IZMX-CAS403-4000 X40, 4000A, 3P
- +IZMX-CAS404-4000 X40, 4000A, 4P

3 Safety Shutter

- +IZMX-SH163 X16, 3P
- +IZMX-SH164 X16, 4P
- +IZMX-SH403 X40, 3P
- +IZMX-SH404 X40, 4P

4 Position cell switches

Cell switch signals the position of the breaker inside of the cassette.
Connect, Test and Disconnect Position.
IZMX-CS16-1-2 X16
IZMX-CS40-L-2 X40, left
IZMX-CS40-R-2 X40, right

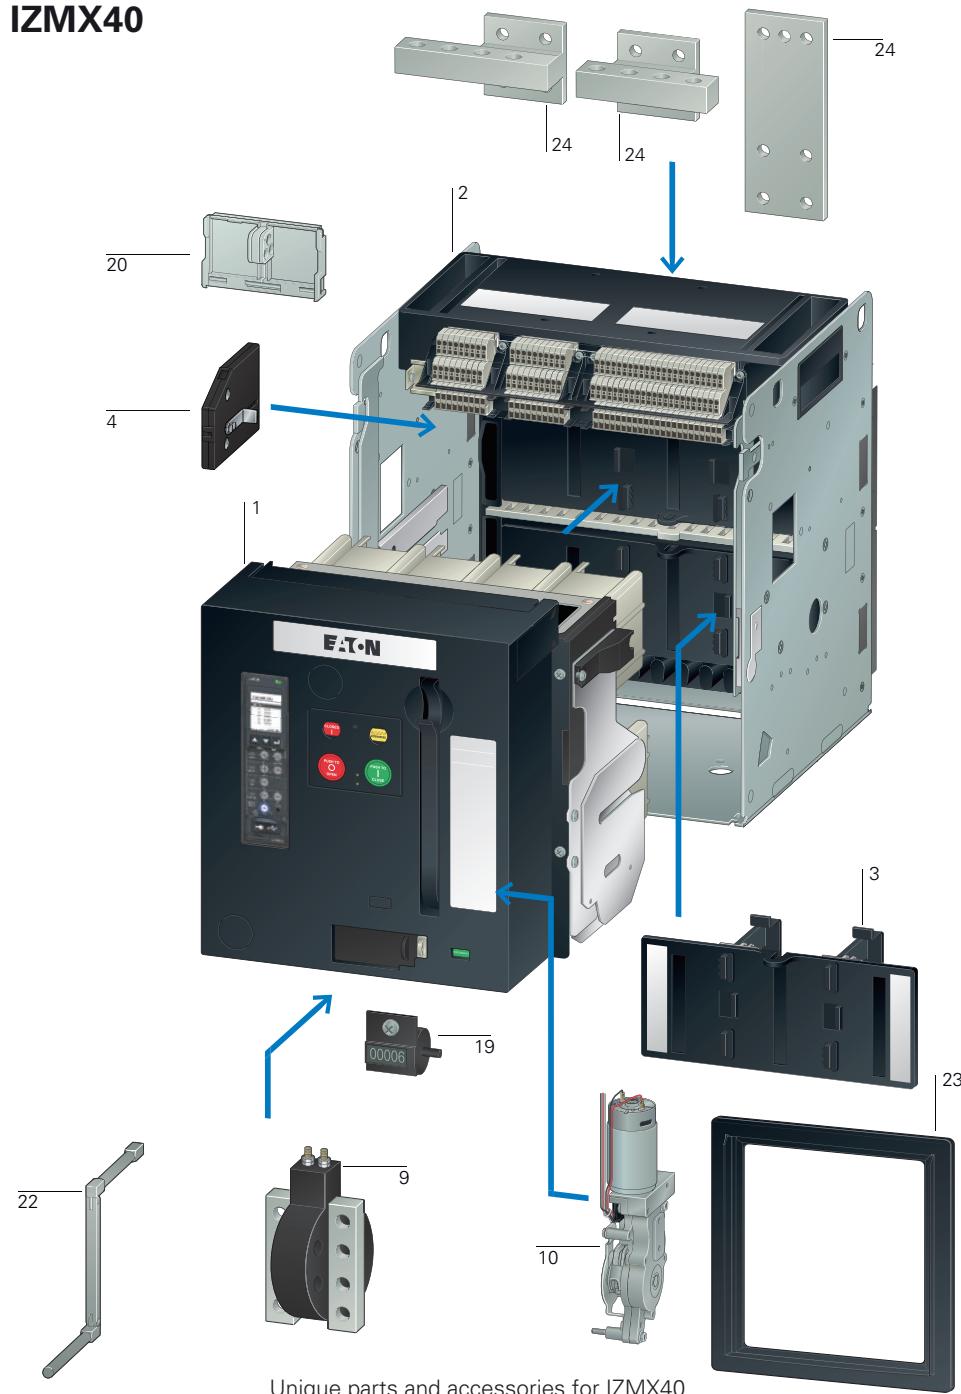

5 Control circuit terminal units

Modular design

6 Trip unit

- PXR20, V-type, current metering
- C - Onboard Modbus
- G - Ground fault protection
- M - Arcflash Reduction Maintenance System™
- +IZMX-PXRV-C
- +IZMX-PXRV-G
- +IZMX-PXRV-GC
- +IZMX-PXRV-GM
- +IZMX-PXRV-GMC

IZMX40

- 7 Trip unit**
PXR25, U-type, power metering
+IZMX-PXRU-G
+IZMX-PXRU-M
+IZMX-PXRU-GM

- 8 Communication modules**
External modules
IZMX-MCAM-2 Modbus
IZMX-ECAM-2 Ethernet
IZMX-PCAM-2 Profibus DP

- 9 Current sensor for neutral conductor**
Current sensor for sensing the neutral-conductor current.
IZMX-CT16-N-2 X16
IZMX-CT40-N-2 X40

- 10 Motor operator**
Automatic charging of the spring force storage for remote or local operations
+IZMX-M16-24DC X16, 24VDC
+IZMX-M16-110AD X16, 110VAC/DC
+IZMX-M16-230AD X16, 220VAC/DC
+IZMX-M40-24DC X40, 24VDC
+IZMX-M40-110AD X40, 110VAC/DC
+IZMX-M40-230AD X40, 110VAC/DC

- 11 Shunt releases**
Opens the breaker by an electrical signal.
+IZMX-ST24DC 24VDC
+IZMX-ST110AD 110VAC/DC
+IZMX-ST230AD 220VAC/DC

- 12 Closing releases**
Closes the breaker by an electrical signal.
+IZMX-SR24DC 24VDC
+IZMX-SR110AD 110VAC/DC
+IZMX-SR230AD 220VAC/DC

- 13 Latch check switch**
For external application
Usage
+IZMX-LCS
- 14 Latch check switch**
For use with closing release.
+IZMX-LCS-SR
- 15 Undervoltage releases**
Opens the breaker by a voltage-drop in the control circuit.
+IZMX-UVR24DC 24VDC
+IZMX-UVR110AD 110VAC/DC
+IZMX-UVR220AD 220VAC/DC
- 16 Auxiliary contacts**
Signaling switch ON-OFF.
2a2b standard. 4a4b maximum for IZMX16 and 1a12b for IZMX40
+IZMX-AS22 X16/X40, add 2a2b
+IZMX-AS44 X40, add 4a4b
+IZMX-AS66 X40, add 6a6b
+IZMX-AS88 X40, add 8a8b
+IZMX-AS1010 X40, add 10a10b
- 17 Trip indicator switches**
Overcurrent trip switch (OTS) signals a trip by the trip unit.
+IZMX-OTS
- 18 Red-pop trip indicator**
Red-pop trip indicator signals a trip by the trip unit
Included in breaker with trip unit
- 19 Switching operations counters**
Counts the number of operations.
+IZMX-OC
- 20 Locking facilities**
Plastic metal
IZMX-PLPC16-P-2 X16, plastic
IZMX-PLPC16-M-2 X16, metal
IZMX-PLPC40-P-2 X40, plastic
IZMX-PLPC40-M-2 X40, metal
- 21 Key locking**
Locking of the breaker by a keylock.
IZMX-KLP-SO-CES-2
IZMX-KLP-SO-KIRK-2
IZMX-KLP-SO-RONIS-2
IZMX-KLP-SO-CASTELL-2
- 22 Levering tool**
Lev-in tool to move the breaker in and out of the cassette. Standard Omega shaped handle is included in D/O breaker. Optional collapsible handle can be ordered separately
- 23 Door escutcheon**
Closes the gap between Breaker and Switchgear-door.
IP31 included in breaker
- 24 Main terminal kits**
Universal terminals, 3- and 4-pole horizontal/vertical
IZMX-THV163-2 X16, 3P
IZMX-THV164-2 X16, 4P
IZMX-THV403-3200-2 X40, 3P, 3200A
IZMX-THV404-3200-2 X40, 4P, 3200A
IZMX-TV403-2 X40, 3P, 4000A, horizontal
IZMX-TV403-2 X40, 3P, 4000A, vertical
IZMX-TV404-2 X40, 4P, 4000A, horizontal
IZMX-TV404-2 X40, 4P, 4000A, vertical

IZMX Series Air Circuit Breakers

IZMX16 Circuit Breaker Basic Device

3P Circuit Breakers of Ammeter Type (Including Type V Trip Unit, 2ON/2OFF Auxiliary Contacts,some Secondary Terminal Blocks. Main Wiring Terminal are no included and need to be ordered separately)

Switching capacity I_{cu}/I_{cs} kA	Rated operational current $I_n = I_u$ A	Setting range Overload releases I_r A	Short-circuit releases		Part no. Article no.	Withdrawable Part no. Article no.
			Delayed $I_{sd} = I_{rx} \dots$	Non-delayed $I_i = I_{nx} \dots$		
						Cassette must be ordered separately.

Interlocked Trip Indicators

Can be used in combination with Overcurrent Trip Switches and Remote Reset function. Not available on INX switch disconnector.

–	IZMX16...	IZMX-TI16 156634	Included in IZMX breaker
–	IZMX40...	IZMX-TI40-2 180363	Included in IZMX breaker

Non-Interlocked Trip Indicators

The switch does contain the mechanical trip-indicator (red pin). Does not interlock with mechanism, allowing for automatic reset of breaker. Can be used in combination with Overcurrent Trip Switches. Cannot be combined with remote reset. Not available on INX switch disconnector.

–	IZMX16...	IZMX-RA16-2 180354	Instead of standard delivery.
–	IZMX40...	IZMX-RA40-2 180365	
–	IZMX16..., IZMX40...	+IZMX-RA 123897	

Remote reset

The breaker can be switched on after a trip as far the trip indicator is resetted manually.

The remote reset allows resetting remotely by an electrical signal. Not available on INX switch disconnector

IZMX Series Air Circuit Breakers

Mechanical Interlock Configurations

IZMX16, INX16, IZMX40, INX40

Mechanical Interlock configurations	Type of interlock	Typical circuit	Interlocks possible
Type 2	Across Two Circuit Breakers One normal power supply and one emergency power supply.	<p>Interlock: A against B</p>	Circuit breaker A can only be closed if B is open and vice versa. A = Normal power supply B = Emergency power supply.
Type 31	Across Three Circuit Breakers Two normal power supplies and one emergency power supply.	<p>Interlock: A, C against B</p>	Circuit breaker A and C can only be closed if B is open. B can only be closed when A and C are open.
Type 32	Across Three Circuit Breakers The two half-bus bars can be powered by a single transformer (bus tie closed) or by both at the same time (bus tie open).	<p>Interlock: 2 against 1 or max. 2 of 3</p>	One of two circuit breakers out of three can be closed at the same time.
Type 33	Across Three Circuit Breakers Three power supplies (generators or transformers) on the same bus bar, making operation in parallel impossible.	<p>Interlock: 1 against 2 or max. 1 of 3</p>	Only one of three circuit breakers can be closed.

IZMX Series Air Circuit Breakers

Wiring Diagram

X40 Master connection diagram

X16 Circuit Breaker Control

Legend:

MOT – Motor Operator for Charging Closing Spring

ST – Shunt Trip

SR – Spring Release

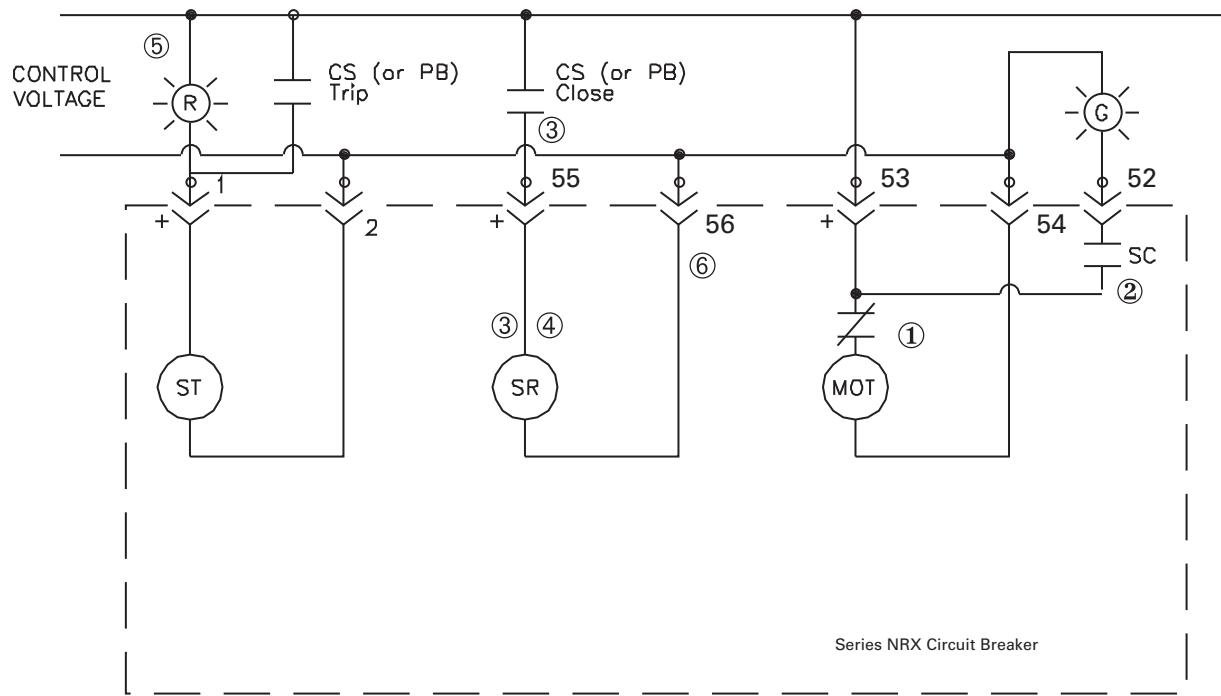

Description of Operation:

1. The motor is energized and runs, charges closing spring, and is cut off by switch.
2. When the spring is charged, the SC closes and the green indicating light will illuminate (if applicable).
3. Closing the CS-C contact energizes the Spring Release Coil and closes the circuit breaker. The Spring Release internal electronics pulse the SR coil and then provides a high impedance circuit. This provides anti-pumping.
4. When the spring discharges its energy, the motor switch will re-energize the charging motor until the spring is charged again.
5. To detect the presence of voltage (Health Light), use Omron Red indicator LED Port # C22-L-R-120 for 120 Vac application. For 230 Vac application, use C22-L-R-230. For 24 Vdc application, use C22-L-R-24. Remove the white (22 mm [0.89 in.]) diameter pilot light) Light Diffuser from the assembly to give better indication of voltage present. Activate the push-button to trip the circuit breaker. See Eaton for other voltages.
6. For secondary contacts, odd numbers should be treated as positive for any accessory. This will not apply to AC ratings.
7. ReferencePage 34 for internal circuit breaker wiring.

IZMX Series Air Circuit Breakers

Wiring Diagram

X40 Circuit Breaker Control

Under Voltage Release

MONITORED
VOLTAGE

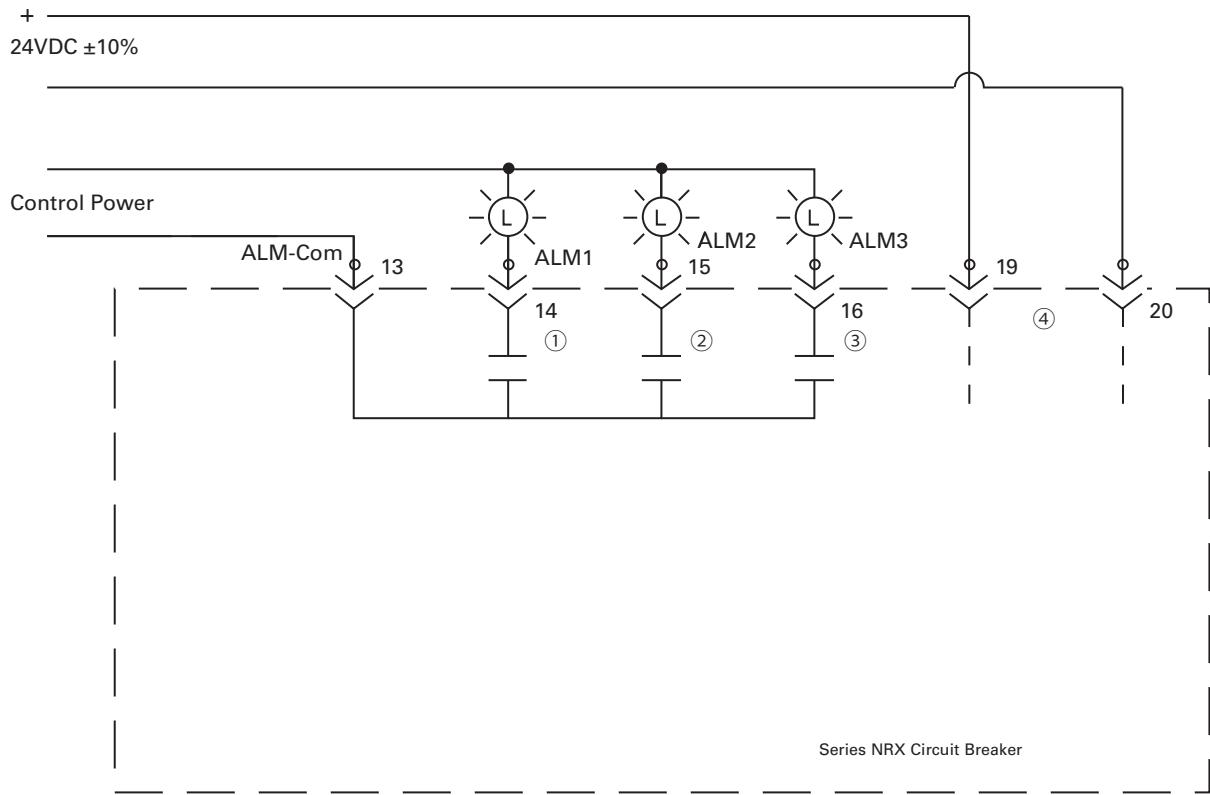

Notes:

1. Treated as the positive voltage for DC ratings.

IZMX Series Air Circuit Breakers

Wiring Diagram

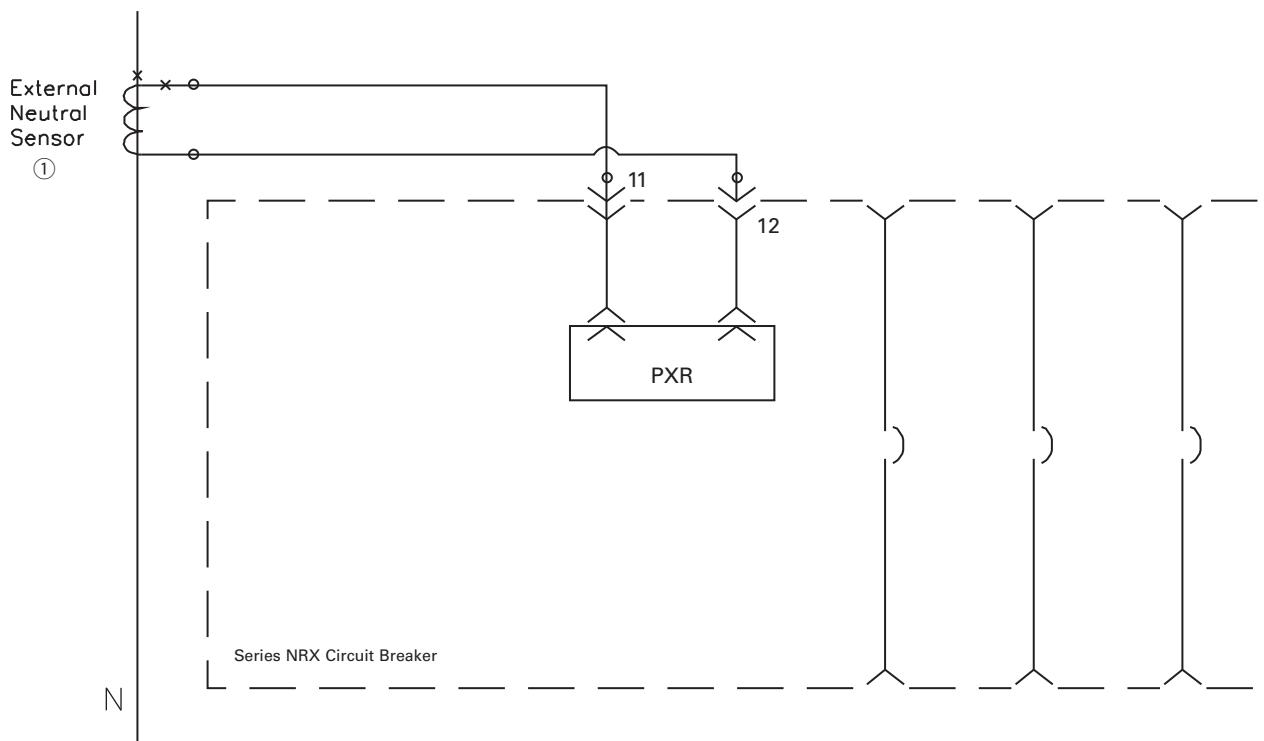

PXR Alarm Wiring

Notes:

1. For the PXR20/25, the Alarm 1 is for Remote Indication/ Maintenance Mode indication. Contact rating 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
2. For the PXR20/25, the Alarm 2 is for High Load alarm/Ground Fault alarm. Contact rating 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
3. For the PXR20/25, the Alarm 3 is for Trip N.O. contact. Contact rating 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
4. If the control voltage is +24 Vdc, the trip unit should be fed from a separate, galvanically isolated + 24 V voltage dc supply.

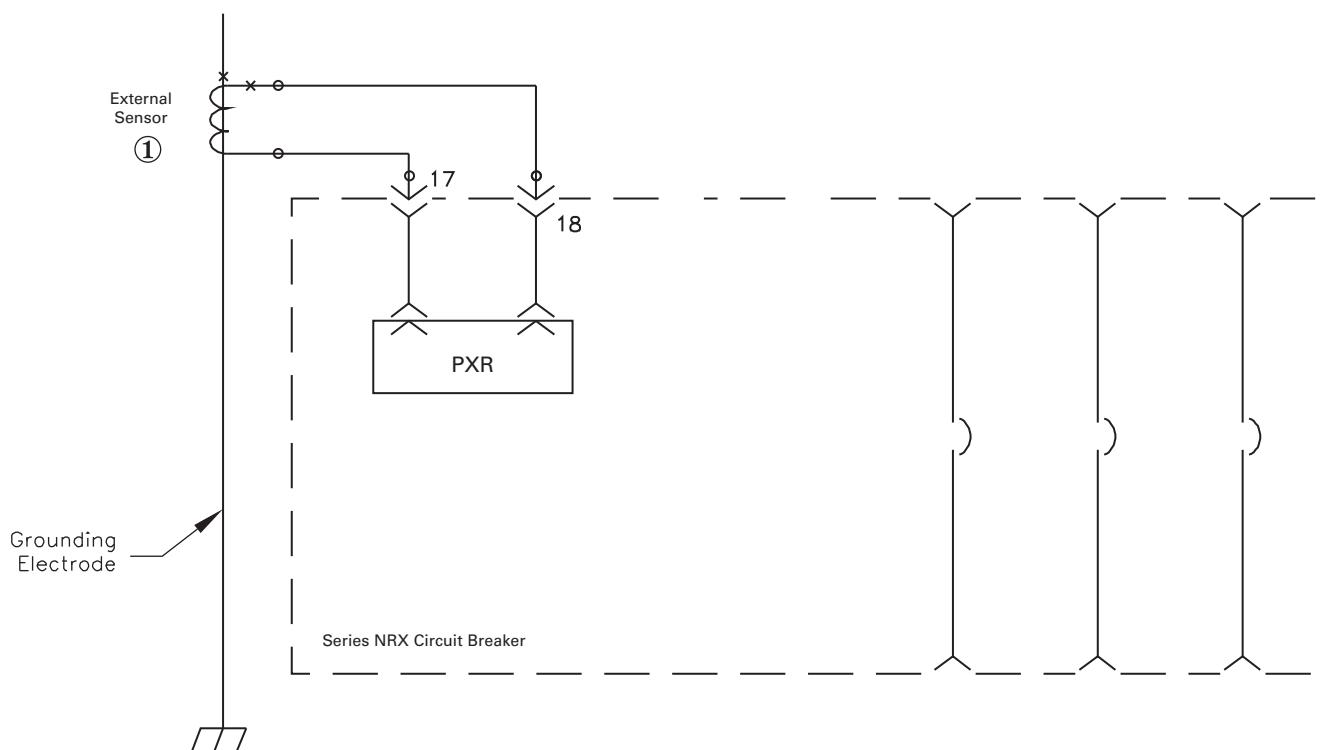

Ground Fault Residual 3-Phase, 4-Wire

Notes:

1. Sensor is customer wired to sense neutral currents. This is required for 3-phase, 4-wire Residual Ground Fault (applicable for trip units having G protection).

Source Ground Fault Sensing

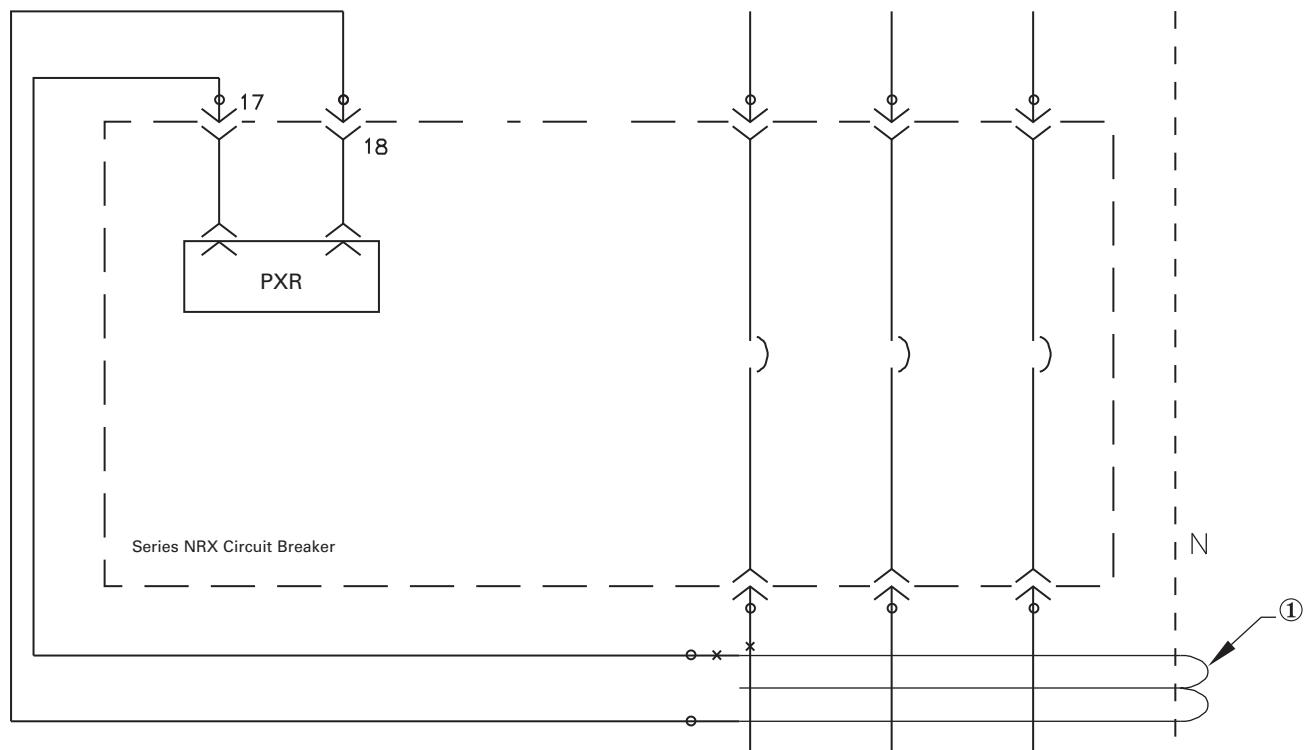

Notes:

1. Sensor NFGFSKIT (IZMX-EFS) is used to sense and detect Ground Fault currents. The Part number is 70C1527G04.

IZMX Series Air Circuit Breakers

Wiring Diagram

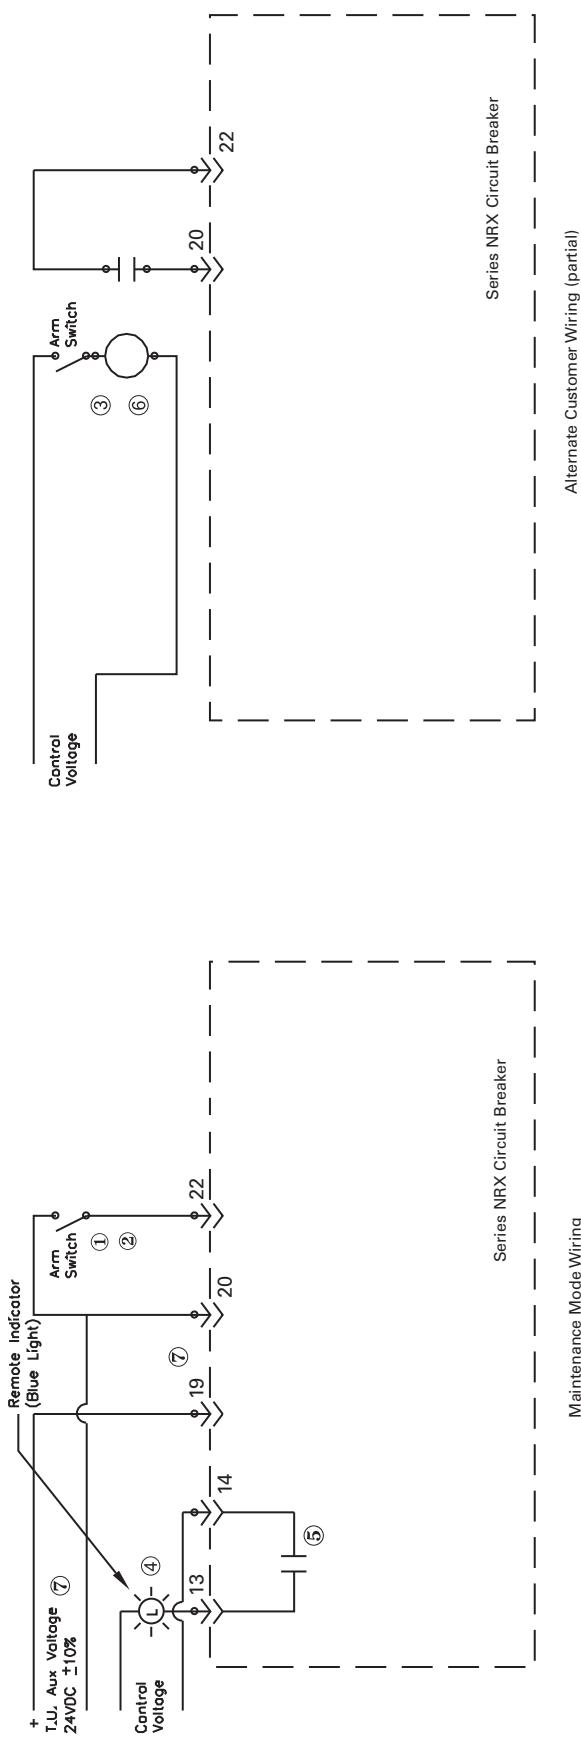

Zero Sequence Ground Fault Sensing

Notes:

1. Sensor NFGFSKIT (IZMX-EFS) is used to sense and detect Ground Fault currents of 3-wire or 4-wire. The Part number is 70C1527G04.

Maintenance Mode Wiring

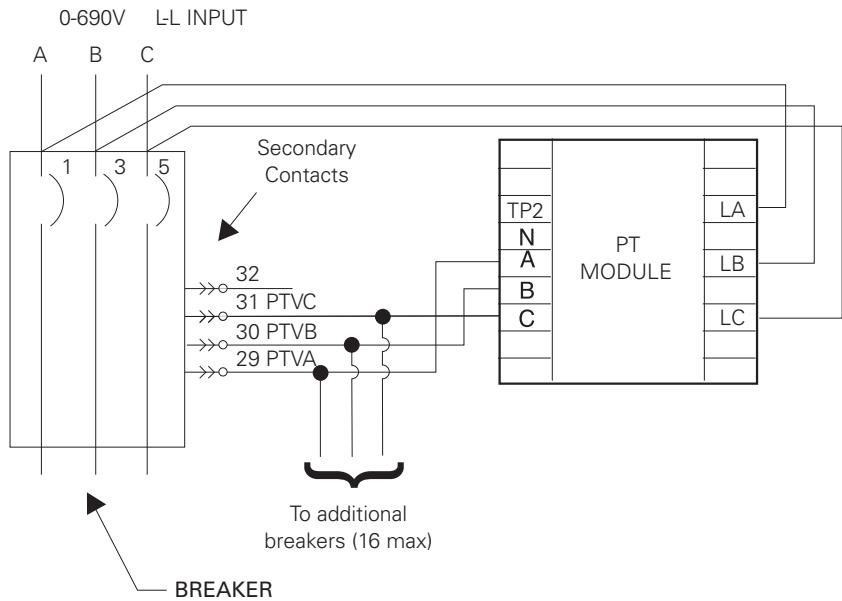

Notes:

1. PXR20/25 can locally be placed in Maintenance Mode via a two position switch located on the trip unit. The function can be armed via a remote switch as shown. In addition, the function can be activated via communication modules. A blue LED on the PXR verifies the PXR release in Maintenance Mode.
2. The recommended selector switch for this low voltage application is Eaton part number 10250T133-2E which includes a contact block rated for logic level and corrosive use.
3. The maximum length of this wiring to remotely arm the switch (or alternate relay contact) is 9.78 feet (3 m). Use #20 AWG wire or larger.
4. A remote Stark Light Announcer panel or other remote indication device can be connected to verify that PXR is in the Maintenance Mode.
5. The relay in the PXR release makes when in Maintenance Mode. Contact is rated 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
6. The PXR release can also be placed remotely in its Maintenance Mode via a general purpose relay (ice cube type with logic level contacts) and activated by a remote control switch. A recommended type is IDEC Relay RY22. Choose the voltage as desired.
7. If a Communication Module is used, The Communication Module will require 24 Vdc power and will provide isolated power to the PXR release in the circuit breaker. If a Communication Module is not used, the PXR release that requires auxiliary voltage for alarms which should be fed from a galvanically isolated, 24 Vdc supply.

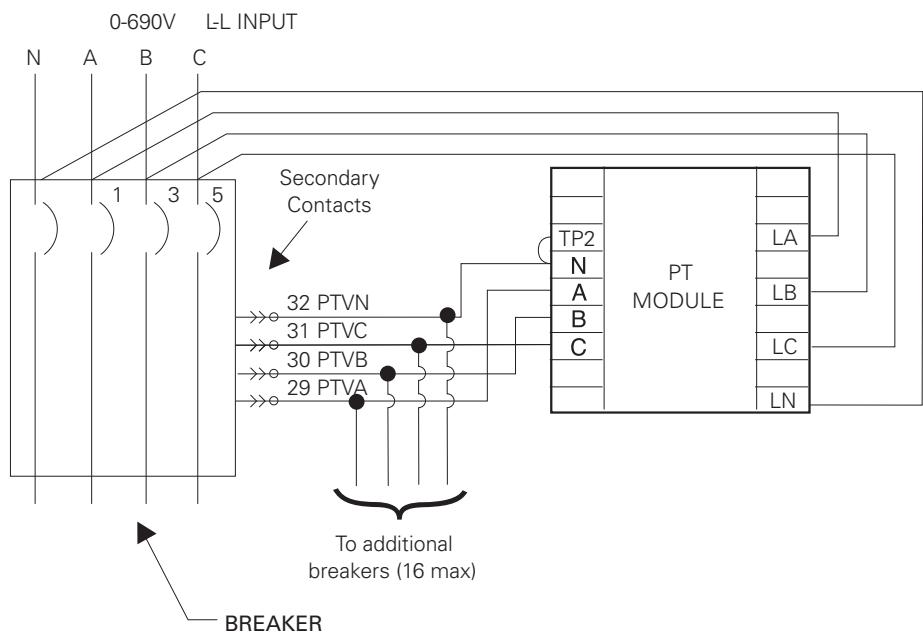

IZMX Series Air Circuit Breakers

Wiring Diagram

External PT Module for PXR25 U type trip unit

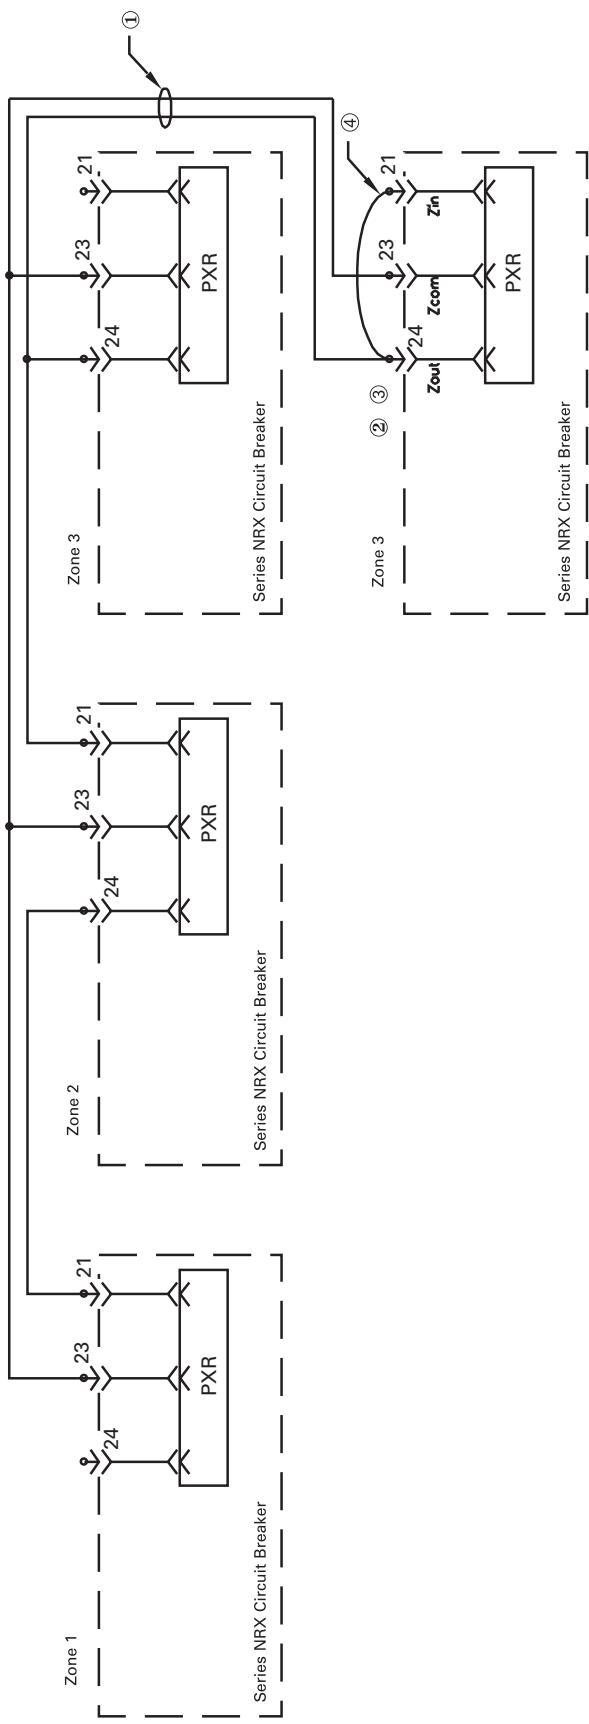

Series NRX Mounted Breakers - 3 pole - 3 wire

Series NRX Mounted Breakers - 3 pole or 4 pole - 4 wire

Zone Interlock Wiring

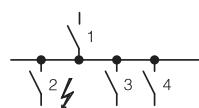

Notes:

1. Twisted together AWG #14 to #20 copper wire. Route the Zone interlock wiring separate from power conductors. DO NOT GROUND any Zone interlock wiring.
2. The maximum distance between two farthest breakers on different zones (from the Z_{out} downstream to the Z_{in} upstream terminals) is 250 feet (75 m).
3. A maximum of 20 breakers may be contained in parallel in one zone.
4. Provide a self interlocking jumper (on Zone 3), if coordination is desired with other downstream breakers not providing the Zone interlock feature.

IZMX Series Air Circuit Breakers

Selectivity

- I_n Rated operational current
- I_u Rated uninterrupted current
- I_{cu} Rated short-circuit breaking capacity
- I_i Set value non-delayed short-circuit releases

Selectivity 415 V AC

Selectivity exists between incoming circuit-breaker 1 and outgoing Circuit Breaker 2 if, only outgoing breaker 2 trips at position 2 - during a short-circuit. System sections 3 and 4 remain operational.

Selection:

Provided that the short-circuit current does not exceed those - values specified ($I_{cc\ eff}$)

These details represent the limits of selectivity.

Both Circuit Breakers will switch off with higher short-circuit-currents.

On IZMX Circuit Breakers with V, P releases, the delay time t_{sd} must be at least 100 ms longer than the delay time of the next downstream levels (2, 3, 4). The I_i : setting of IZMX breaker should be on OFF to allow on any short circuit level a time delayed tripping.

IZMX Series Air Circuit Breakers

Tripping Characteristics

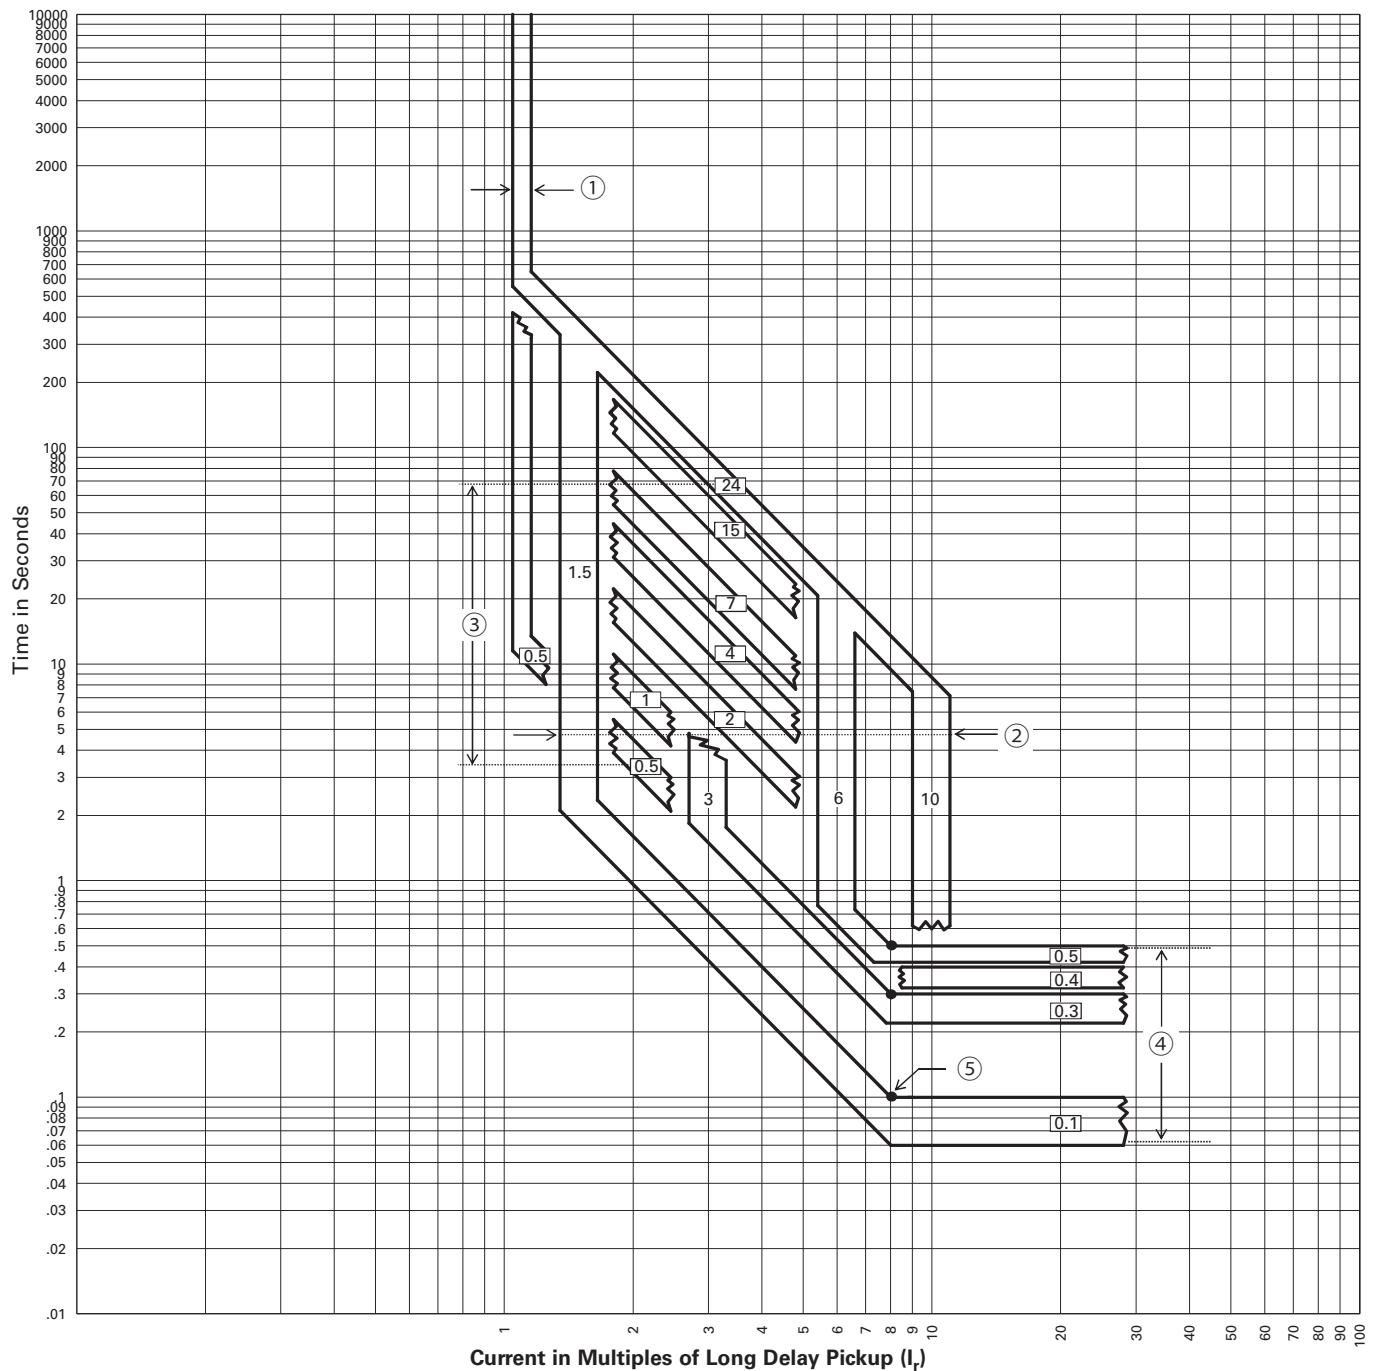

IZMX16(40)…V(U)… PXR20/25 Long Delay(L) and Short Delay(S) Curves
L-Protection: I^2t -Characteristic curve and S-Protection: Flat characteristic curve

Notes:

1. Short slope: Flat, the actual pickup point has $100\% \pm 10\%$ tolerance.
2. Long delay I^2T slopes flattens out at $6x$ of I_r .
3. Short time delay from 0[50ms] to 0.5s, with $+0 / -80$ ms tolerance except 0.1s and 0s setting
0.1s setting, trip time is 0.06s to 0.1s
0s setting, nominal clear time is 60ms with auxiliary power and 120ms without.
4. If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
5. Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
6. This curve is for 50Hz, 60Hz applications.
7. These curves are comprehensive for series NRX NF&RF(IZMX16/40) circuit breakers including all frame sizes, ratings, and constructions.
The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current

IZMX16(40)…V(U)… PXR20/25 Long Delay(L) and Short Delay(S) Curves
S-Protection with: I²t-Characteristic curve ON

Notes:

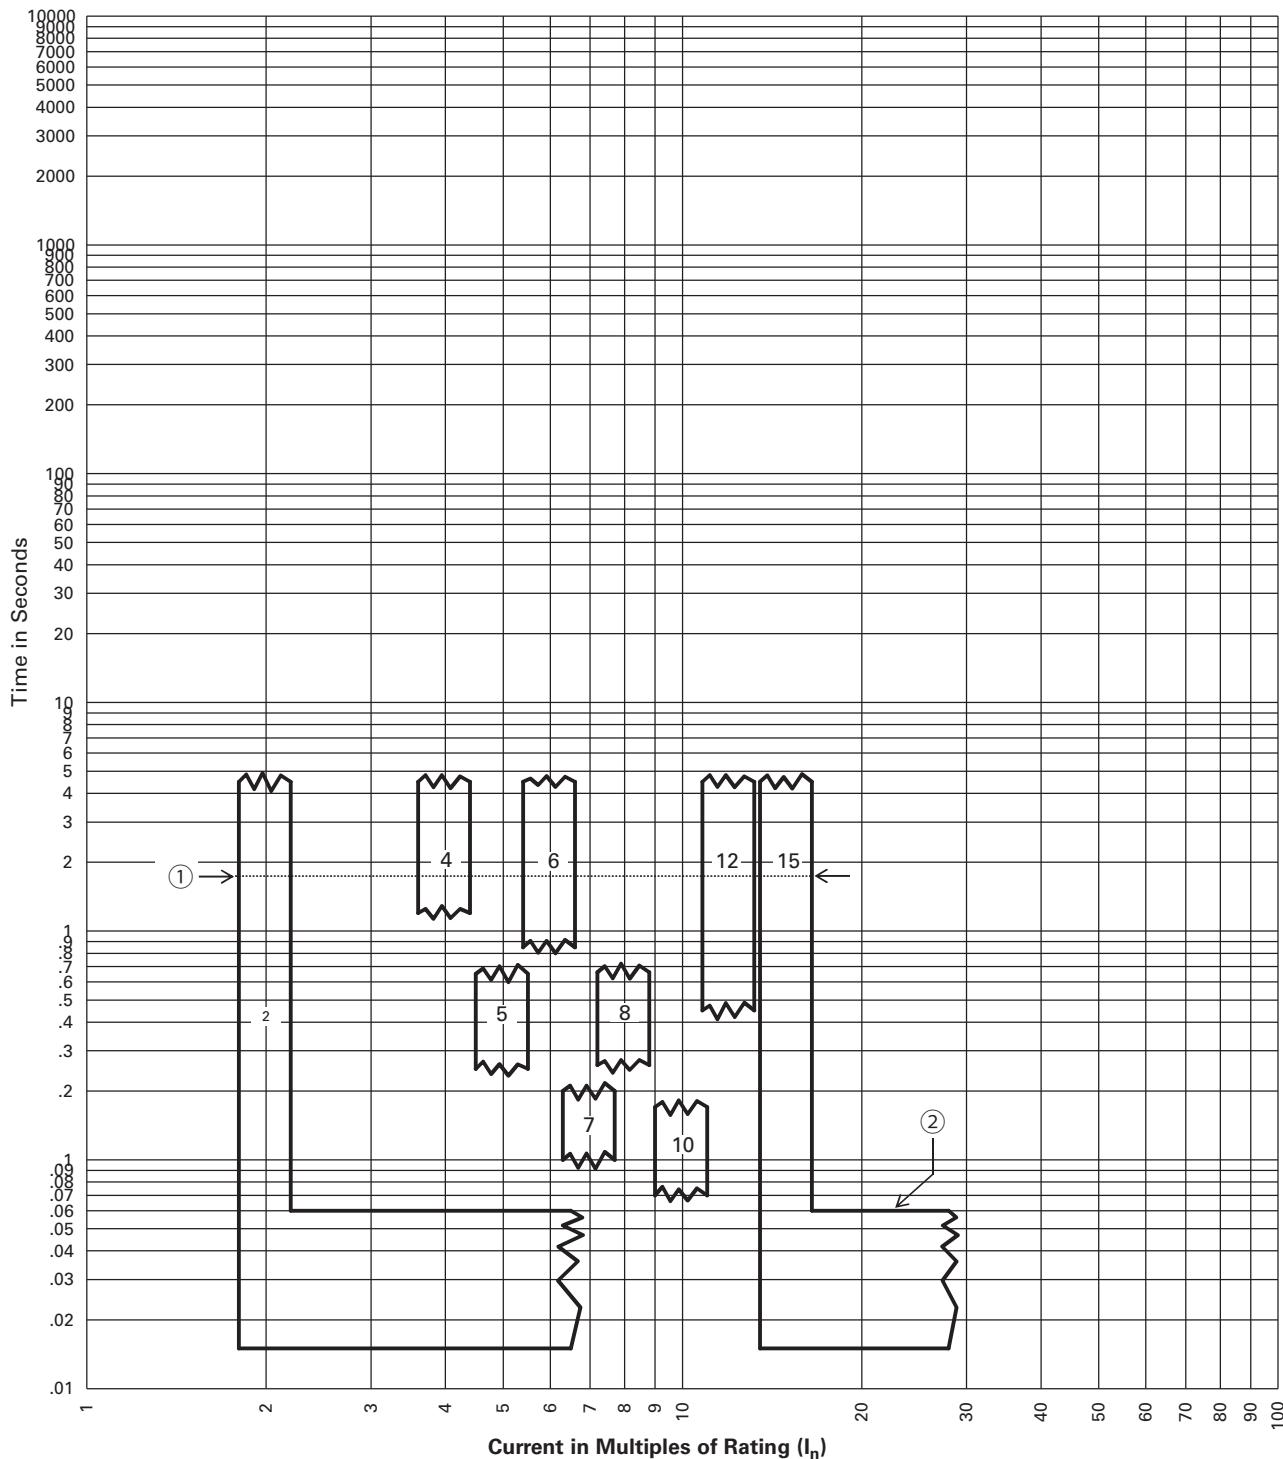

1. This curve shown as a multiple of the LONG PU setting(I_r). The actual pickup point occurs at 110% of the I_r, with ± 5% tolerance.
2. SDPU = 1.5x to 10x of I_r, have 100% ± 10% tolerance.
3. LD Time = 0.5s to 24s, have 100% +0 / -30% tolerance.
4. SD Slope = I²T. The short pickup points have ± 10% tolerance.
time setting from 0.1s to 0.5s, with steps of 0.1s, except 0.2s.
tolerance is 100% +0 / -30% except 0.1s, has tolerance 100% +0 / -40%.
5. I²T slopes flattens out at 8x of I_r for top of band with FLAT time minimum value prevailing for bottom of band. For all curves the lower flat response time value projected to I²T line will determine the other break point and shape of the curve.
6. If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
7. Curves applies from -20°C to +50°C ambient. Temperatures above +85°C will cause over temperature trip.
8. This curve is for 50Hz, 60Hz applications.
9. These curves are comprehensive for series NXR NF&RF(IZMX16/40) circuit breakers including all frame sizes, ratings, and constructions.

IZMX Series Air Circuit Breakers

Tripping Characteristics

IZMX16(40)…V(U)… PXR20/25 Instantaneous(I) Curves

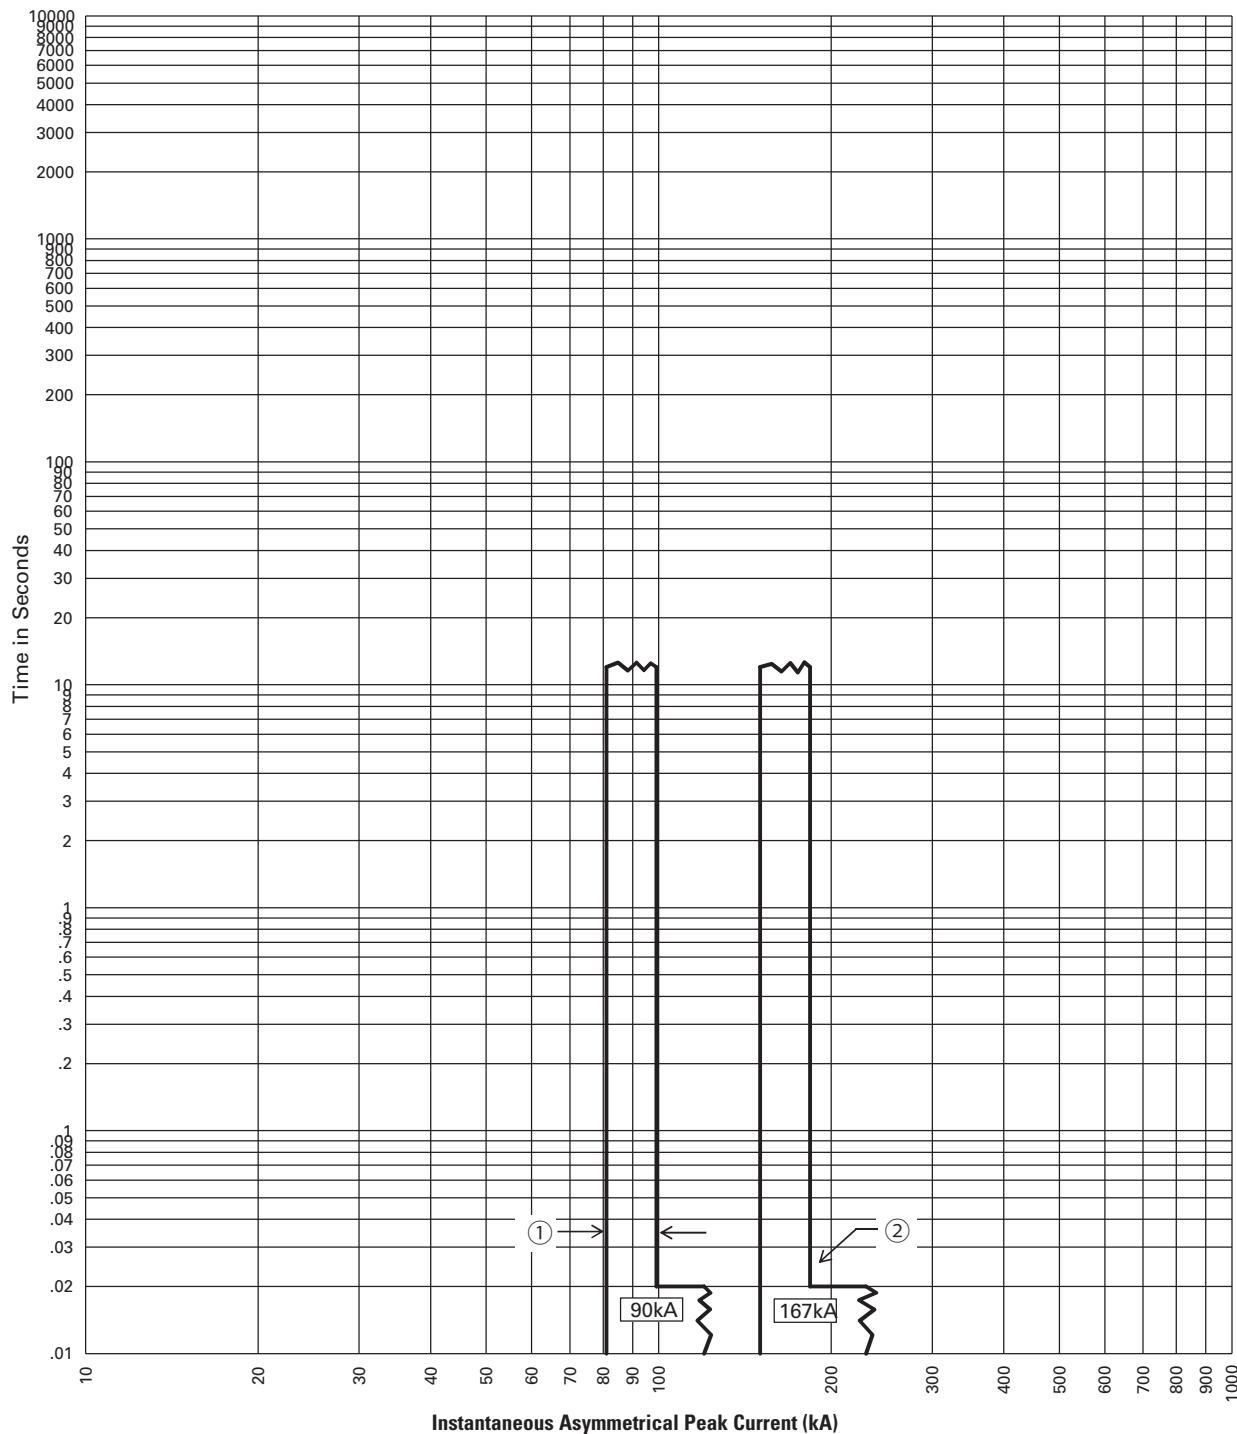

I-Protection: Adjustable

Notes:

1. The Instantaneous settings have conventional 100% \pm 10% as the pickup points.
2. The nominal Instantaneous trip time is 60ms with auxiliary power supply and 100ms without.
3. Instantaneous protection could be disabled by setting Instantaneous PU switch to OFF position.
4. The curve is shown as a multiple of the Current Rating (I_n).
5. The end of the curve is determined by the interrupting rating of the circuit breaker.
6. Curves applies from -20°C to +50°C ambient. Temperatures above +85°C will cause over temperature trip.
7. This curve is for 50Hz, 60Hz applications.
8. These curves are comprehensive for series NRX NF&RF(IZMX16/40) circuit breakers including all frame sizes, ratings, and constructions. The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

**IZMX16(40)…V(U)… PXR20/25 Instantaneous(I) Curves
Instantaneous Trip at High Fault Currents**

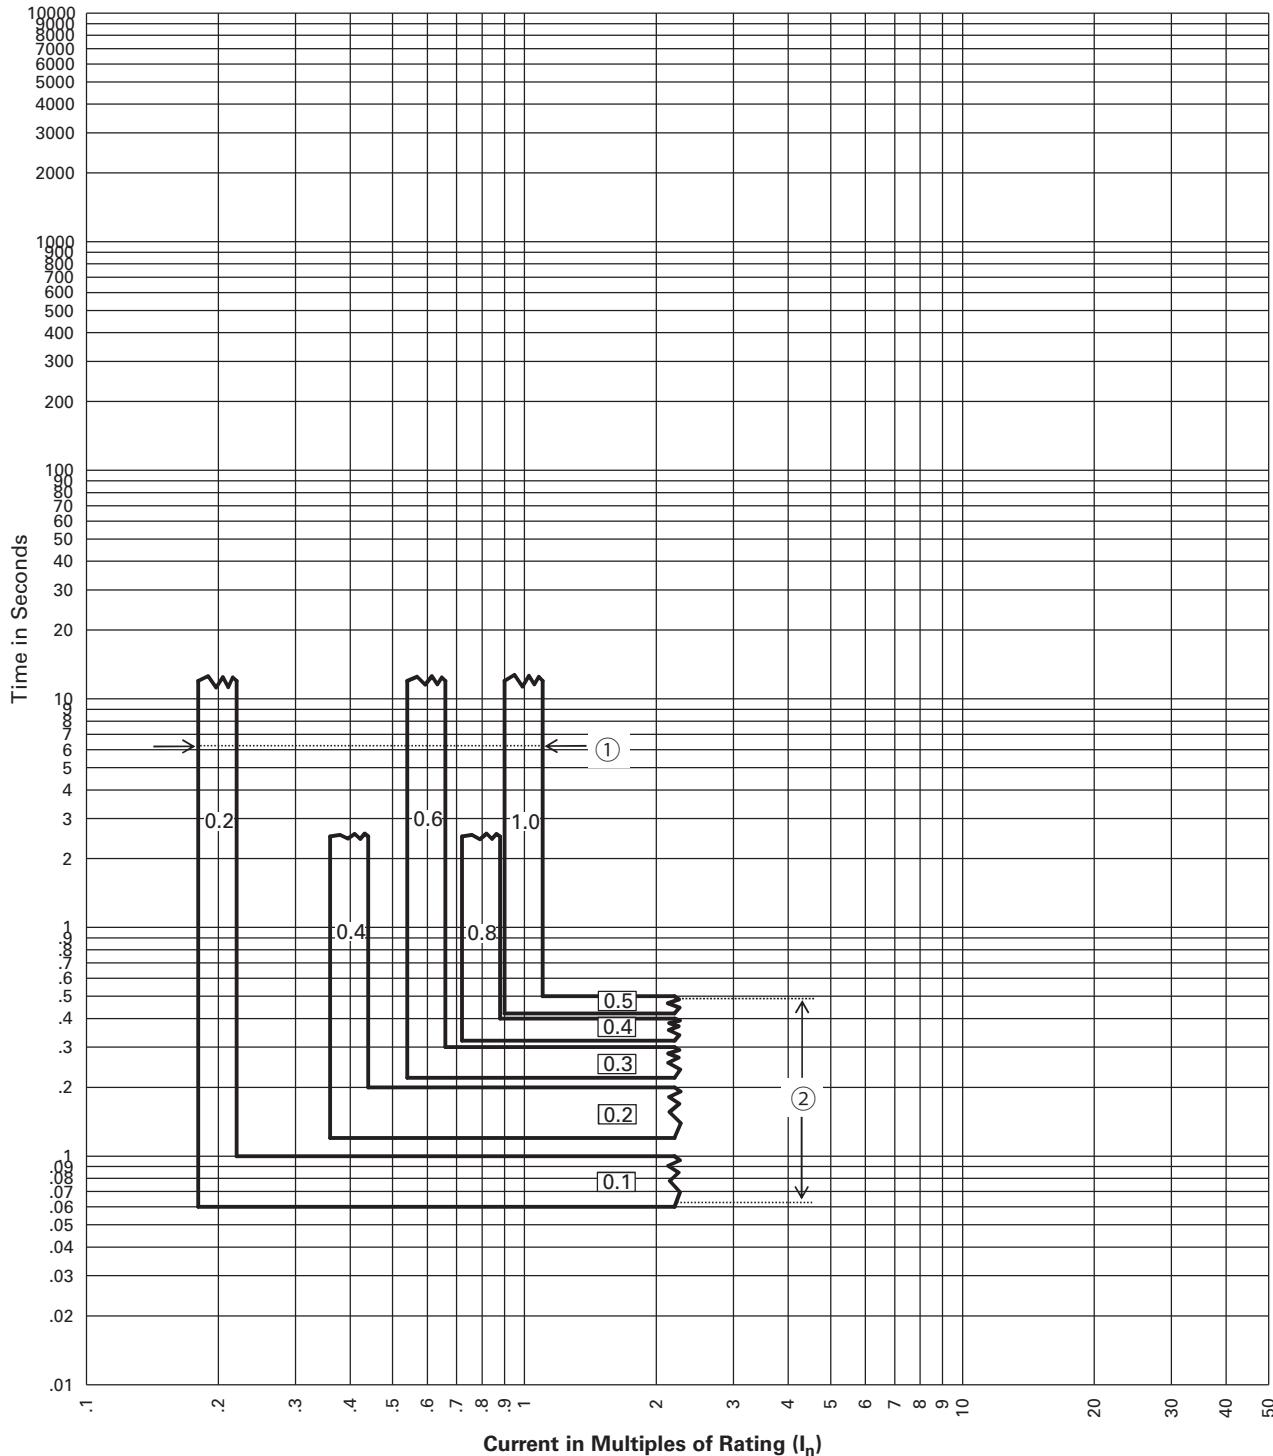

Notes:

1. Fixed High Instantaneous Trip function is provided in the circuit breaker for Series NRX - Type NF(IZMX16) set to pickup at 90kA. Instantaneous peak current level. The tolerance is 100% \pm 10% as the pickup points.
2. The peak current level setting for NRX - Type RF(IZMX40) is fixed at 167kA.
3. This protection is functional even when the Instantaneous is set to the OFF position.
4. The PXR will light the Instantaneous LED for a High Instantaneous trip.
5. The total Instantaneous clearing times shown are conservative and consider the maximum response times of the trip unit, the circuit breaker opening, and the interruption of the current under factors that contribute to worst case conditions, like: maximum rated voltages, single phase interruption, and minimum power factor. Faster clearing times are possible depending on the specific system conditions, the type of circuit breaker applied, and if any arc reduction settings are employed.

IZMX Series Air Circuit Breakers

Tripping Characteristics

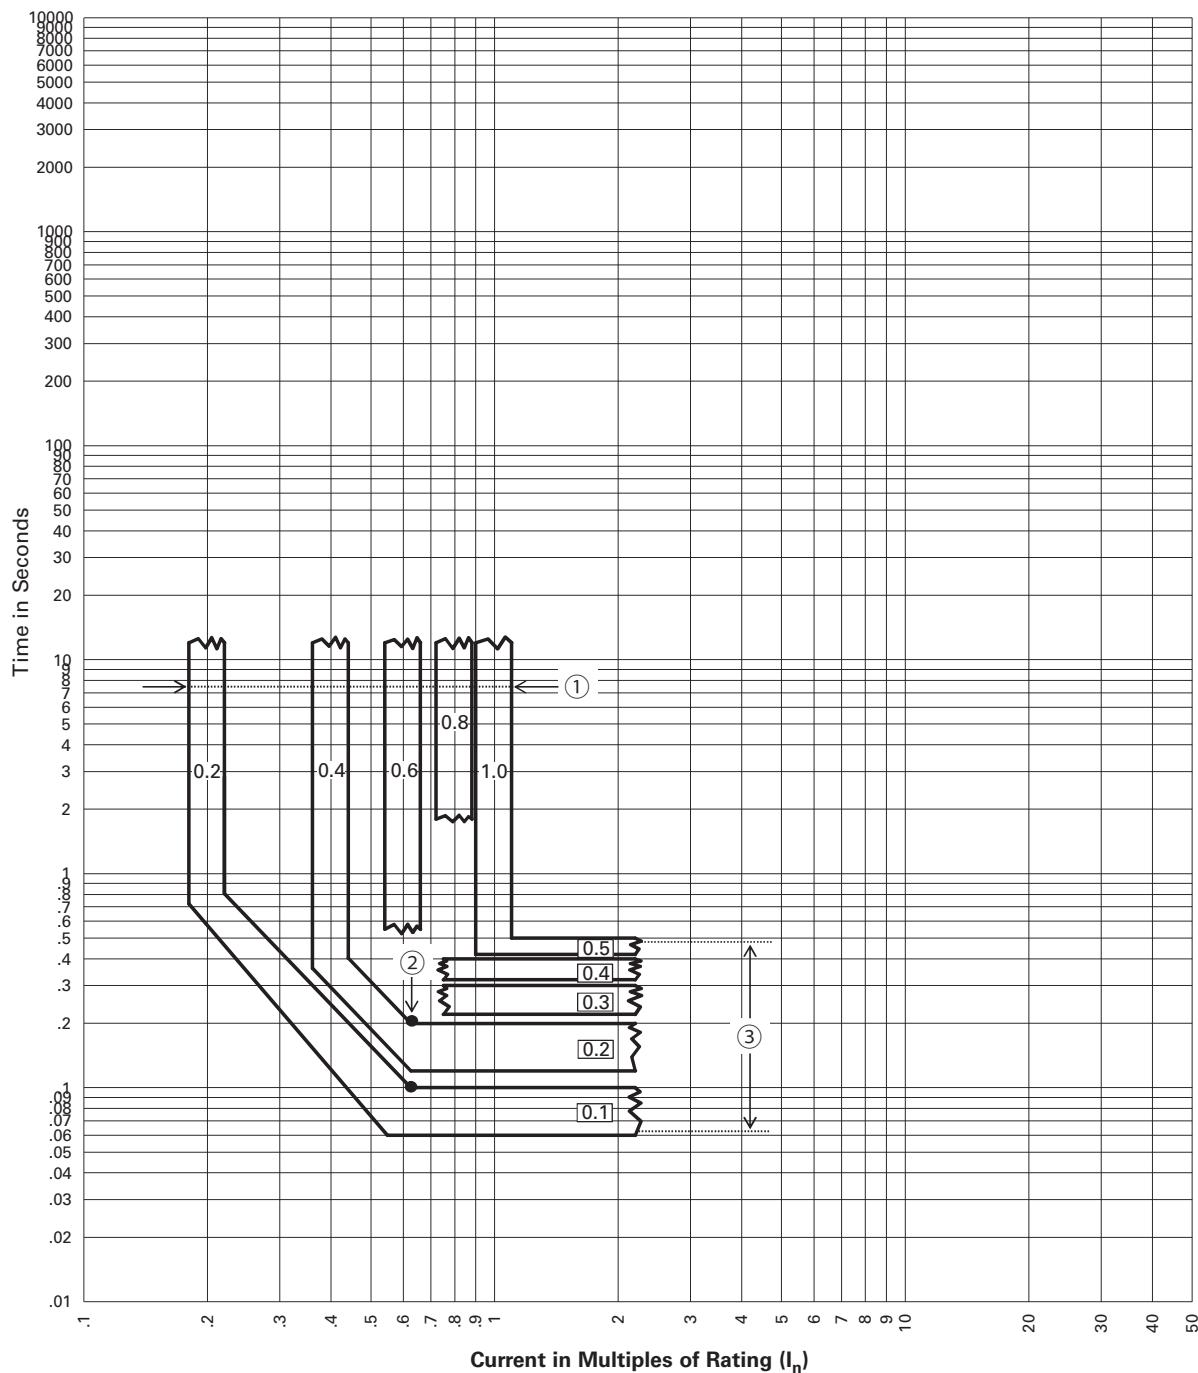

IZMX16(40)…V(U)… PXR20/25 Ground(G) Curves G: Ground fault protection - Flat characteristic curve

Notes:

1. Ground PU setting from 0.2 to 1.0 of I_n with steps of 0.2, have tolerance of 100% \pm 10%.
2. Ground Flat time from 0.1s to 0.5s, with 0.1s increments.
3. Ground slope: Flat, trip time tolerance is +0 / -80ms for all settings except 0.1s setting is 0.06s to 0.1s.
4. The curve is shown as a multiple of the Current Rating (I_n).
5. The end of the curve is determined by the interrupting rating of the circuit breaker.
6. Curves applies from -20°C to +50°C ambient. Temperatures above +85°C will cause over temperature trip.
7. This curve is for 50Hz, 60Hz applications.
8. These curves are comprehensive for series NXR NF&RF(IZMX16/40) breakers including all frame sizes, ratings, and constructions. The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

IZMX16(40)…V(U)… PXR20/25 Ground(G) Curves
G: Ground fault protection- I^2t -Characteristic curve ON

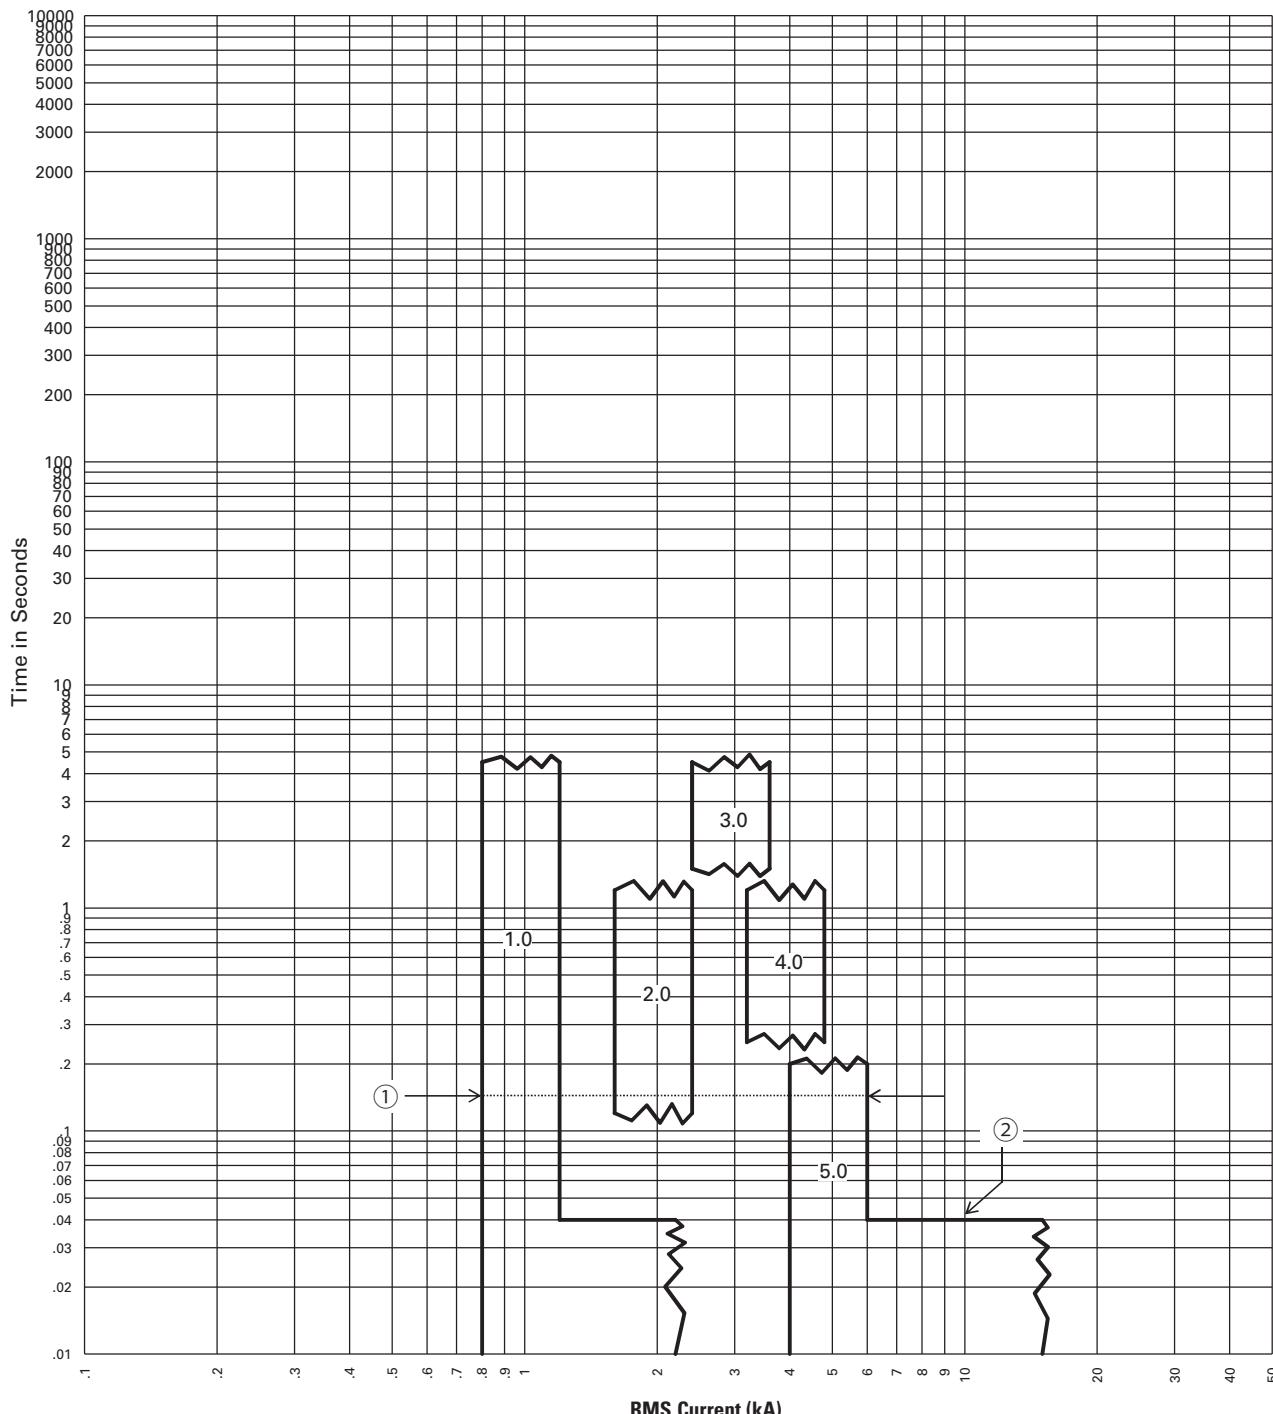

Notes:

1. Ground PU setting from 0.2 to 1.0 of I_n with steps of 0.2 , have tolerance of $100\% \pm 10\%$.
2. Break points at $0.625 \times I_n$ to flat.
3. Ground I^2T time from 0.1s to 0.5s, with 0.1s increments.
4. Ground slope: Flat, trip time tolerance is $+0 / -80\text{ms}$ for all settings except 0.1s setting is 0.06s to 0.1s.
Ground slope: I^2T , tolerance is
 $0.1\text{s}, 0.2\text{s} : +0 / -40\%$
 $0.3\text{s}, 0.4\text{s}, 0.5\text{s} : +0 / -30\%$
5. The curve is shown as a multiple of the Current Rating (I_n).
6. The end of the curve is determined by the interrupting rating of the circuit breaker.
7. Curves applies from -20°C to $+50^\circ \text{C}$ ambient. Temperatures above $+85^\circ \text{C}$ will cause over temperature trip.
8. This curve is for 50Hz ,60Hz applications.
9. These curves are comprehensive for series NRX NF&RF(IZMX16/40) circuit breakers including all frame sizes, ratings, and constructions.
The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

IZMX Series Air Circuit Breakers

Tripping Characteristics

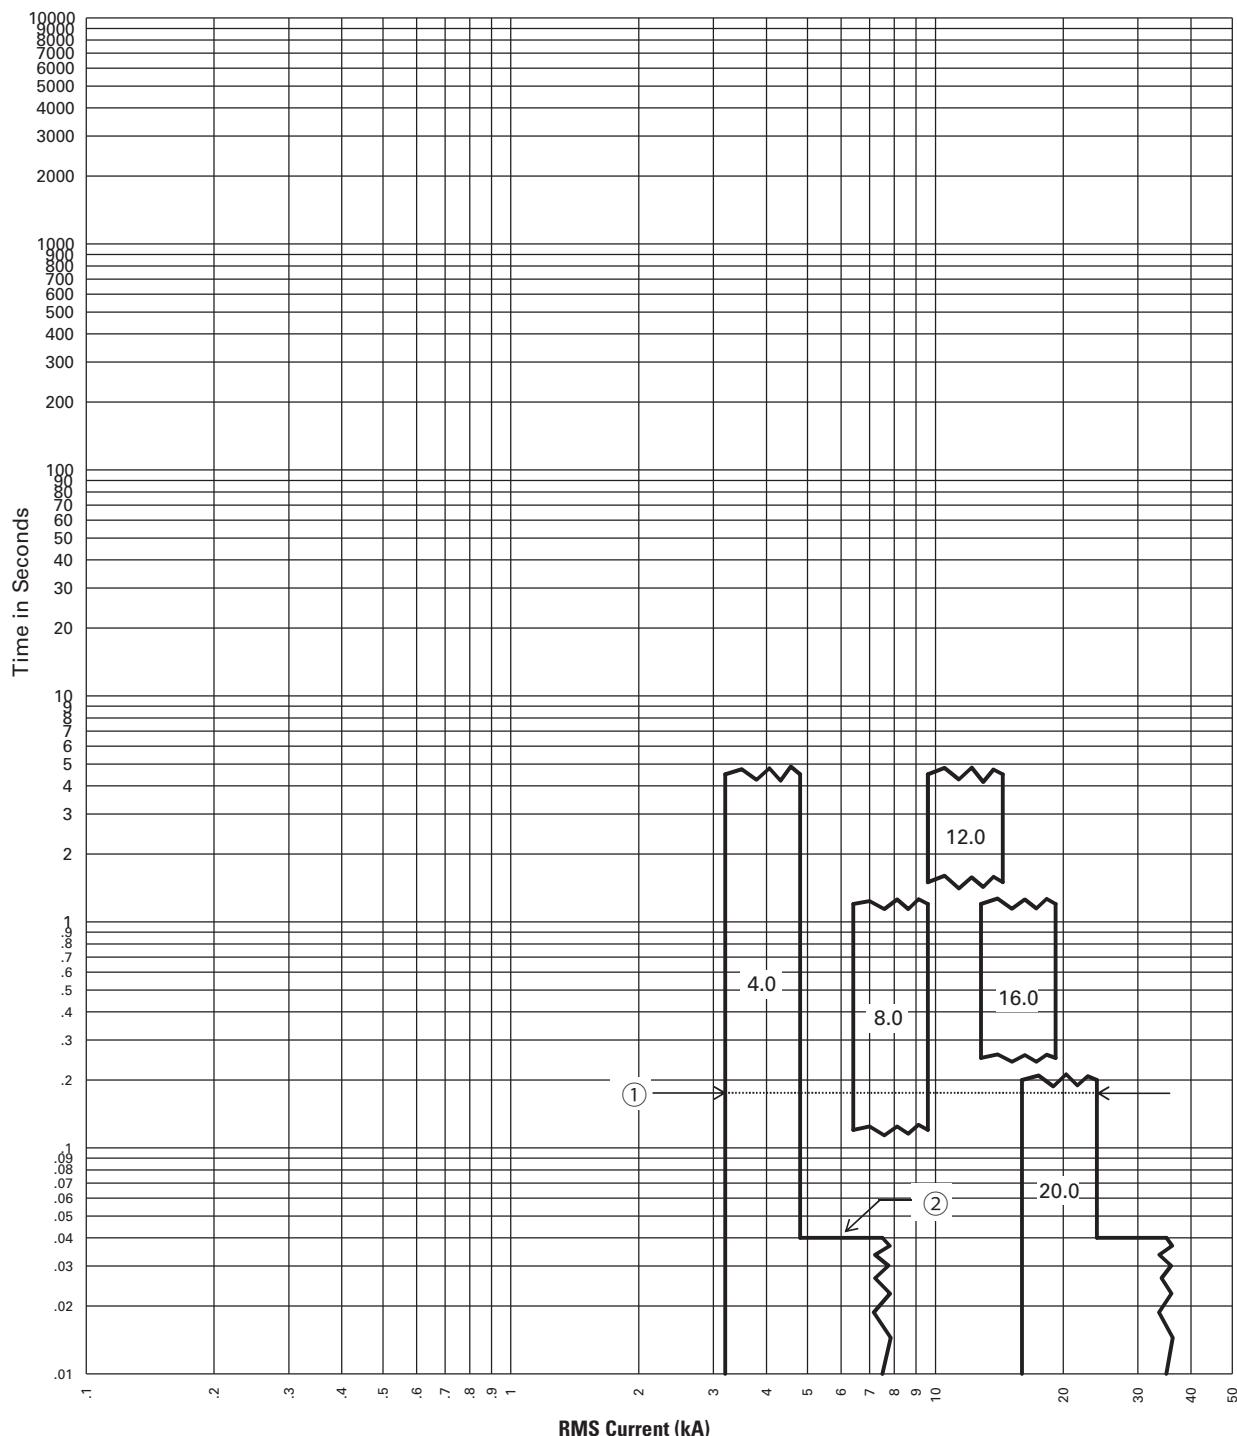

IZMX16...V(U)... PXR20/25 Maintenance Mode Curve
Arc-flash Reduction Maintenance Mode for IZMX16 up to 1600A

Notes:

- Nominal reduction values have a tolerance of $\pm 20\%$.
- The nominal ARMs trip time is 40ms with auxiliary power supply.
- The Maintenance Mode feature must be ENABLED via setting Maintenance Mode switch to ON position remote switch, or communications for these curves to apply. Maintenance Mode is in use being shown by blue LED.
- The PXR will light the Instantaneous LED for a Maintenance Mode Trip.
- The end of the curve is determined by the interrupting rating of the circuit breaker.
- Curves applies from -20° C to $+50^\circ \text{ C}$ ambient. Temperatures above $+85^\circ \text{ C}$ will cause over temperature trip.
- This curve is for 50Hz ,60Hz applications.
- These curves are comprehensive for series NRX NF(IZMX16) circuit breakers including all frame sizes, ratings, and constructions. The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

IZMX40…V(U)… PXR20/25 Maintenance Mode Curve
Arc-flash Reduction Maintenance Mode for IZMX40 up to 4000A

Notes:

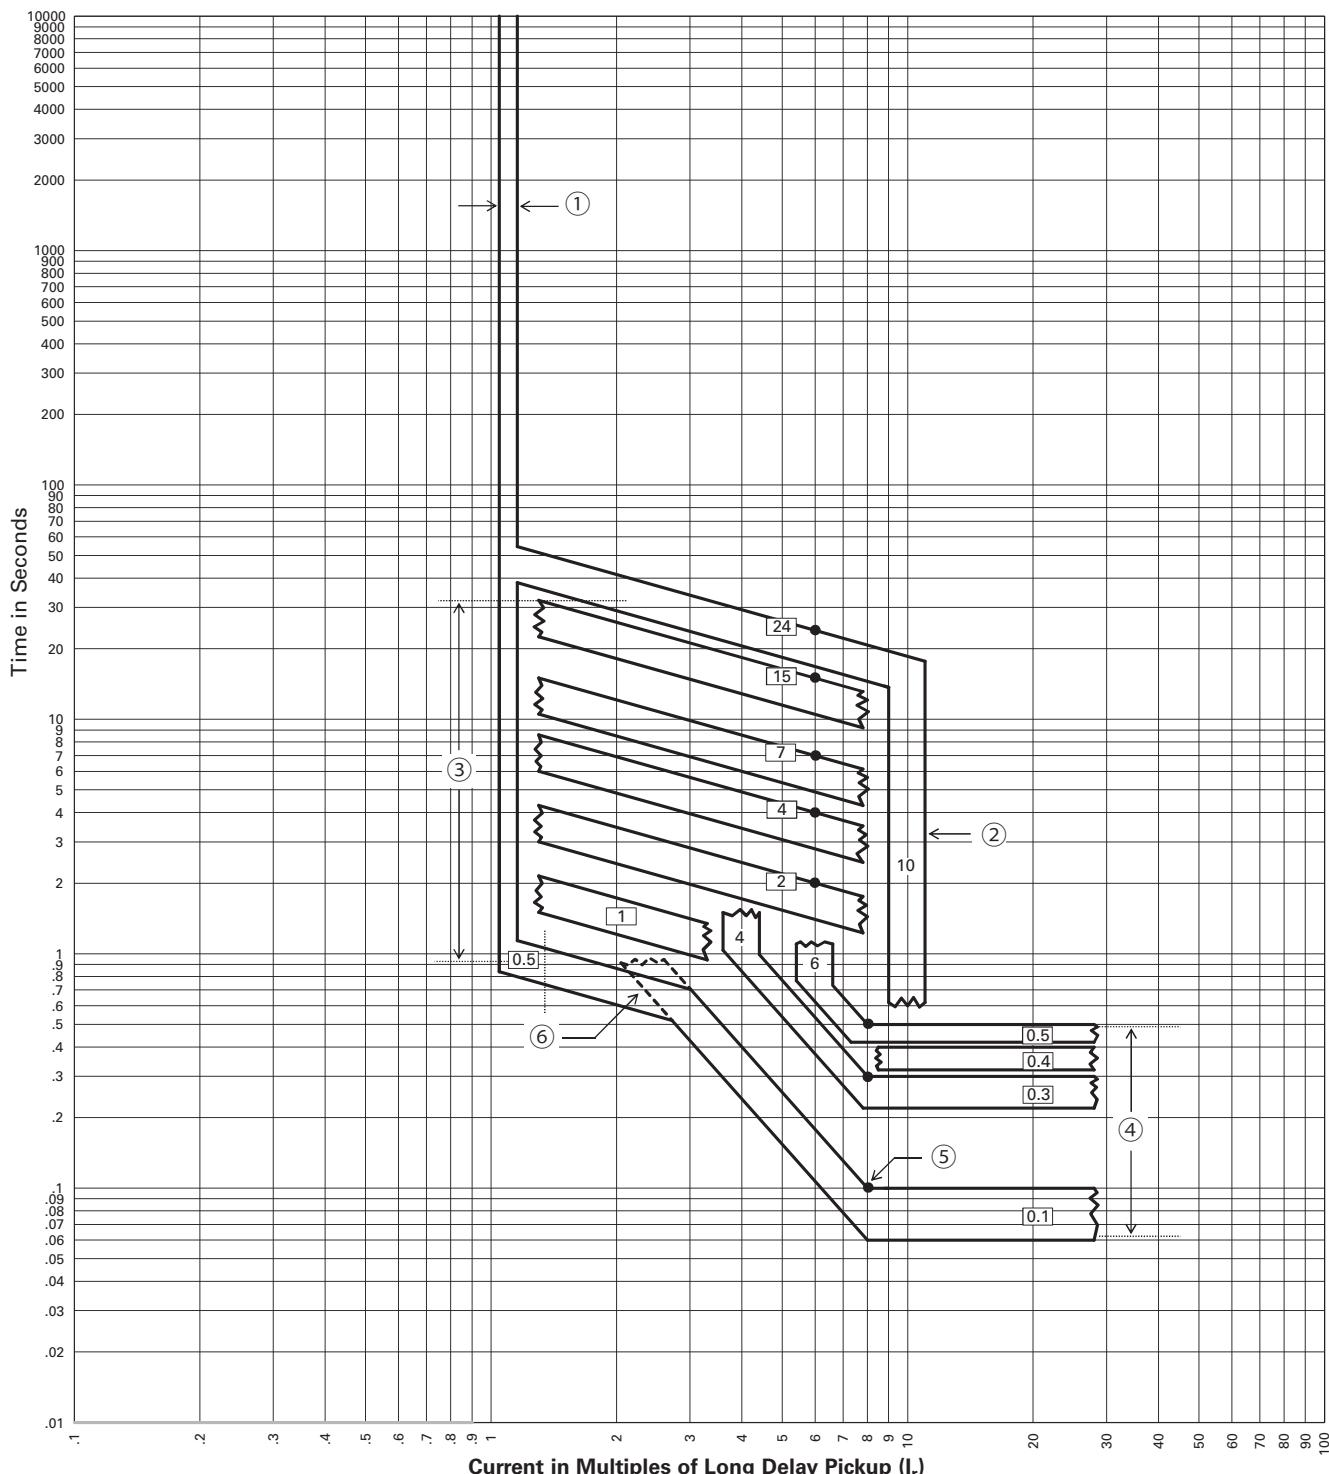

1. Nominal reduction values have a tolerance of $\pm 20\%$.
2. The nominal ARMs trip time is 40ms with auxiliary power supply.
3. The Maintenance Mode feature must be ENABLED via setting Maintenance Mode switch to ON position remote switch, or communications for these curves to apply. Maintenance Mode is in use being shown by blue LED.
4. The PXR will light the Instantaneous LED for a Maintenance Mode Trip.
5. The end of the curve is determined by the interrupting rating of the circuit breaker.
6. Curves applies from -20° C to $+50^\circ \text{ C}$ ambient. Temperatures above $+85^\circ \text{ C}$ will cause over temperature trip.
7. This curve is for 50Hz ,60Hz applications.
8. These curves are comprehensive for series NRX RF(IZMX40) circuit breakers including all frame sizes, ratings, and constructions. The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

IZMX Series Air Circuit Breakers

Tripping Characteristics

IZMX16(40)…V(U)… PXR20/25 Long Delay(L) Curves

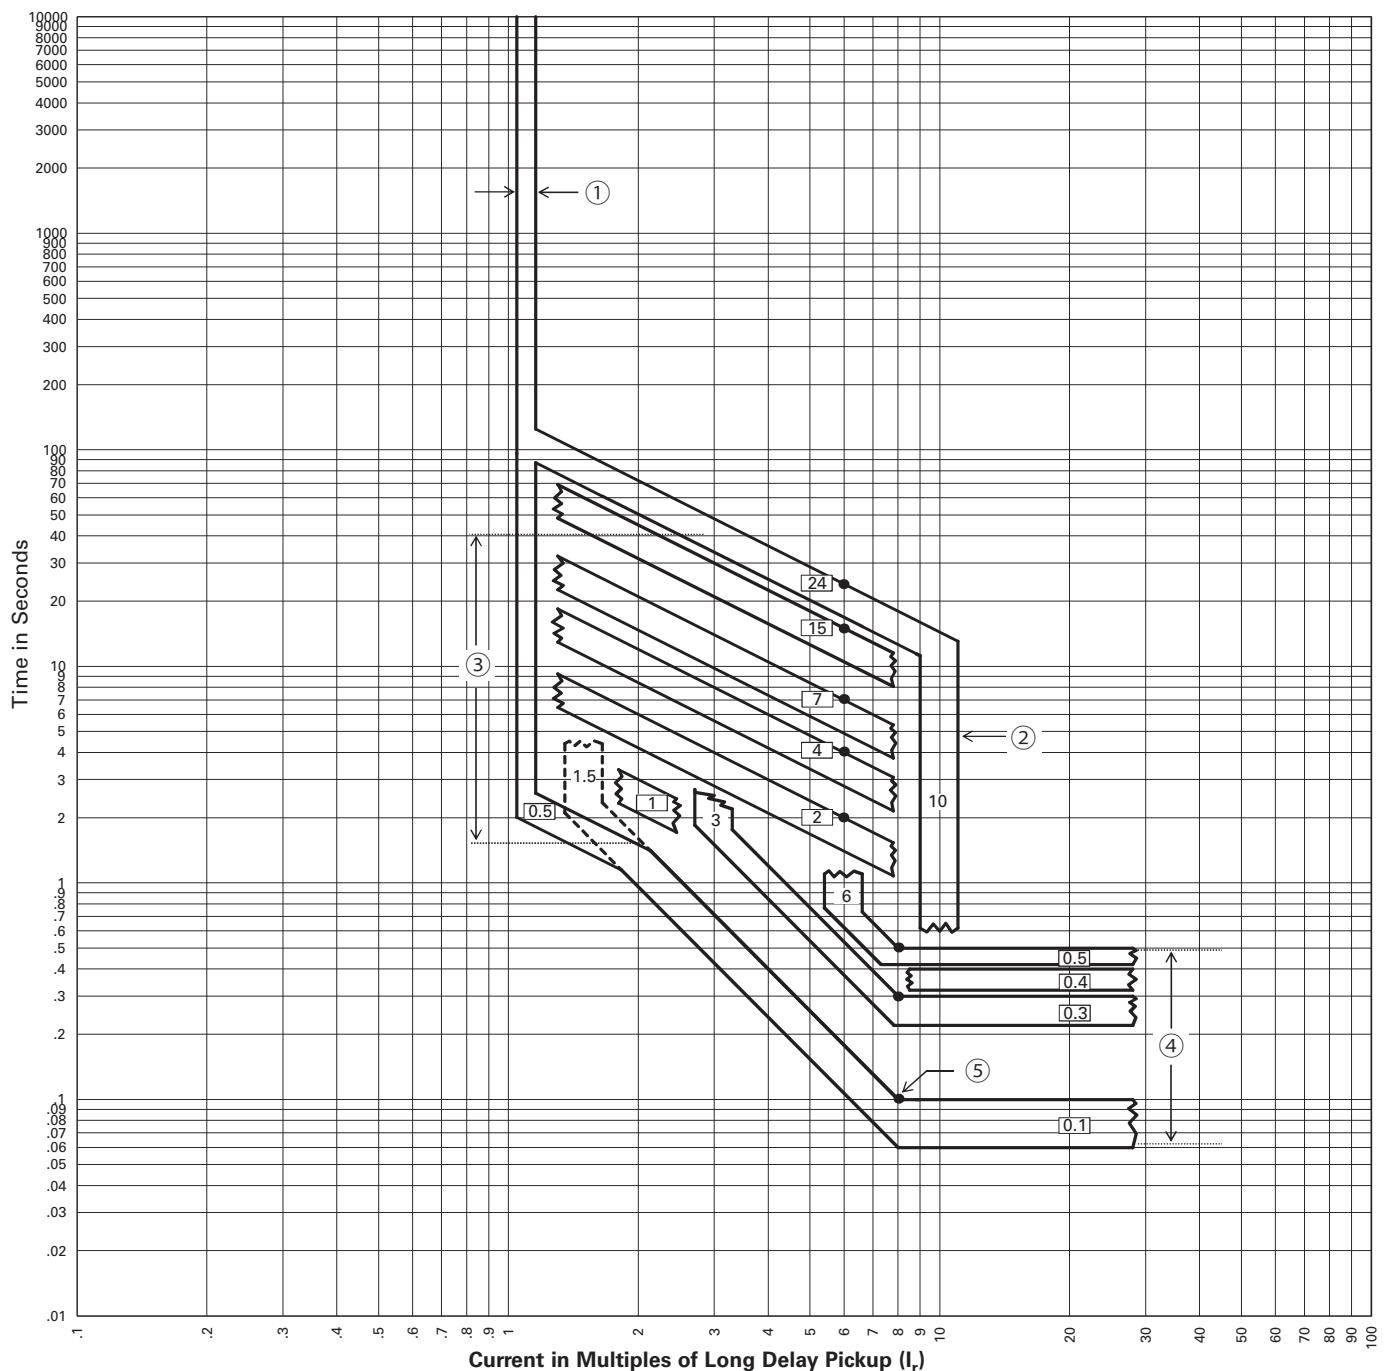

L-Protection: $I^{0.5}t$ -Characteristic curve

Notes:

1. This curve shown as a multiple of the LONG PU setting (I_r). The actual pickup point occurs at 110% of the I_r , with $\pm 5\%$ tolerance.
 2. SDPU = 1.5x to 10x of I_r , have $100\% \pm 10\%$ tolerance.
 3. LD Time = 0.5s to 24s, have $100\% +0 / -30\%$ tolerance.
 4. SD Slope = $I^0.5T$. The short pickup points have $\pm 10\%$ tolerance. time setting from 0.1s to 0.5s, with steps of 0.1s, except 0.2s. tolerance is $100\% +0 / -30\%$ except 0.1s, has tolerance $100\% +0 / -40\%$.
 5. $I^0.5T$ slopes flattens out at 8x of I_r for top of band with FLAT time minimum value prevailing for bottom of band. For all curves the lower flat response time value projected to $I^0.5T$ line will determine the other break point and shape of the curve.
 6. If the short delay time is longer than long delay time, the short delay trip time will follow the long time setting.
 7. If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
 8. Curves applies from $-20^\circ C$ to $+50^\circ C$ ambient. Temperatures above $+85^\circ C$ will cause over temperature trip.
 9. This curve is for 50Hz, 60Hz applications.
 10. These curves are comprehensive for series NRX NF&RF(IZMX16/40) circuit breakers including all frame sizes, ratings, and constructions.
- The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

IZMX16(40)…V(U)… PXR20/25 Long Delay(L) Curves
L-Protection: I^2t -Characteristic curve

Notes:

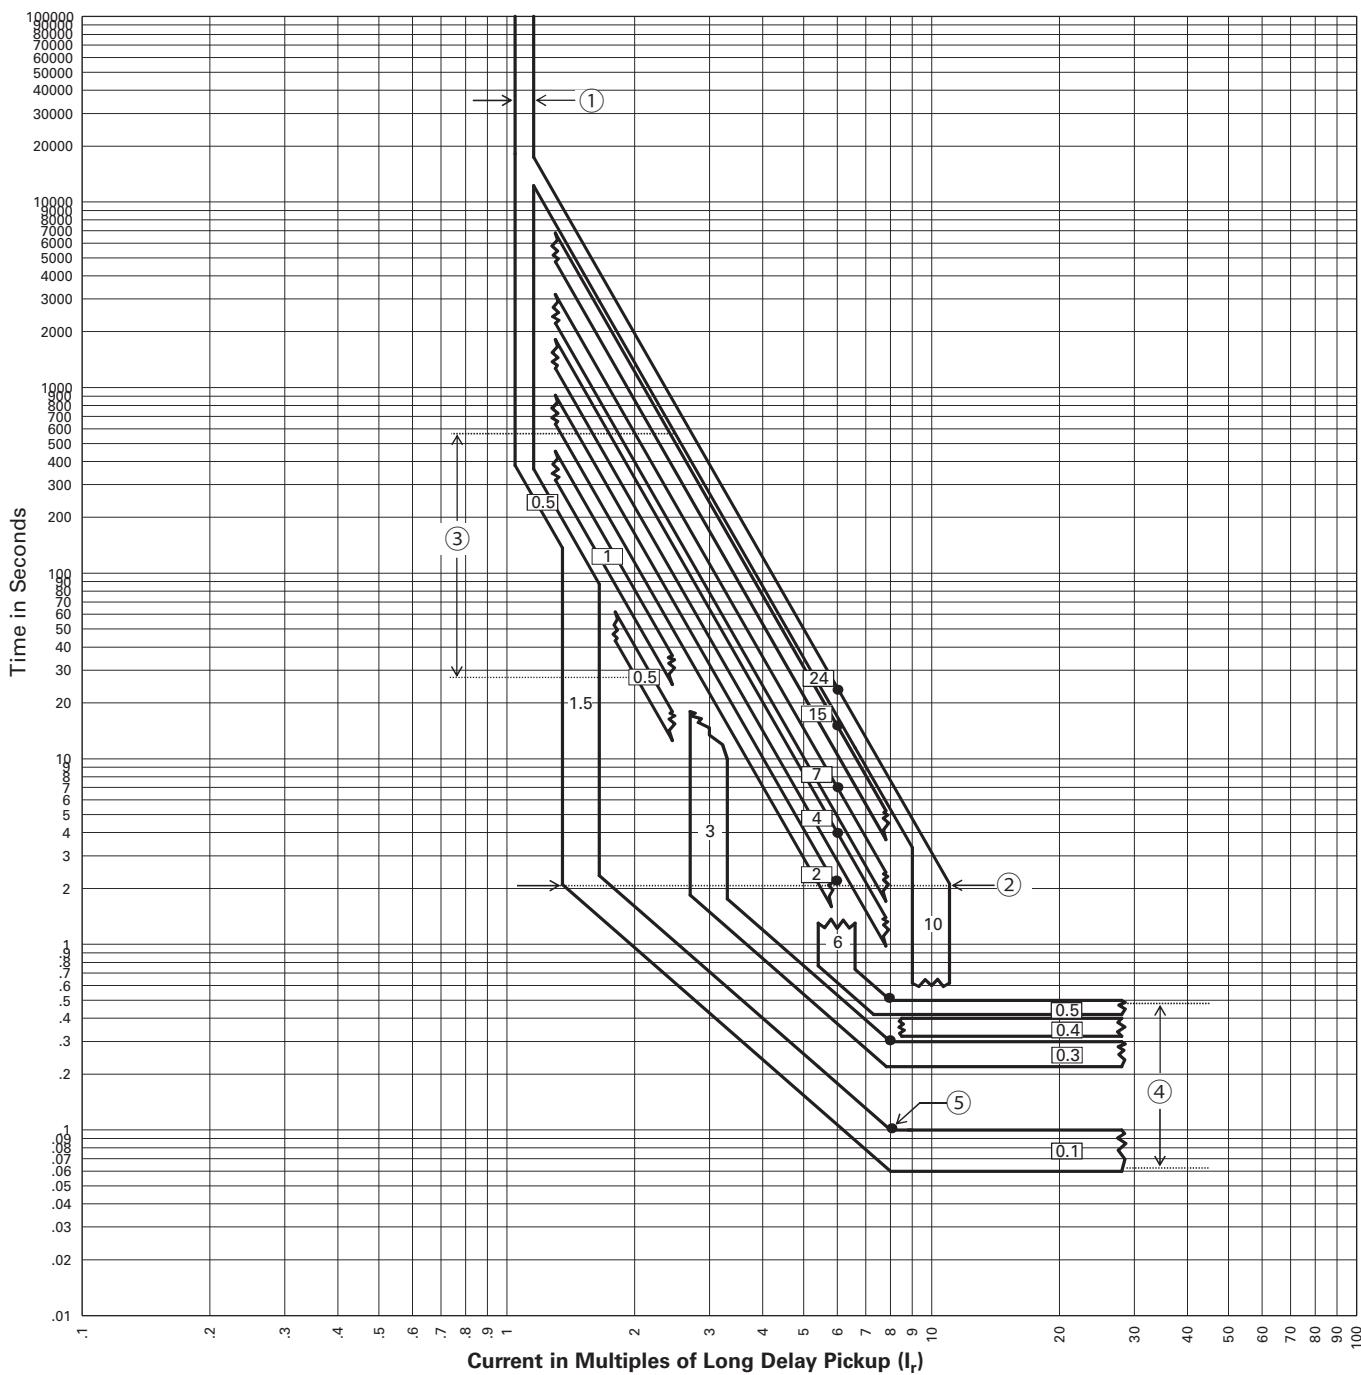

- This curve shown as a multiple of the LONG PU setting(I_r). The actual pickup point occurs at 110% of the I_r , with $\pm 5\%$ tolerance.
- $SDPU = 1.5x$ to $10x$ of I_r , have $100\% \pm 10\%$ tolerance.
- LD Time = 0.5s to 24s, have $100\% +0 / -30\%$ tolerance.
- SD Slope = I^2T . The short pickup points have $\pm 10\%$ tolerance.
- time setting from 0.1s to 0.5s, with steps of 0.1s, except 0.2s.
tolerance is $100\% +0 / -30\%$ except 0.1s, has tolerance $100\% +0 / -40\%$.
- I^2T slopes flattens out at 8x of I_r for top of band with FLAT time minimum value prevailing for bottom of band. For all curves the lower flat response time value projected to I^2T line will determine the other break point and shape of the curve.
- If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
- Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
- This curve is for 50Hz, 60Hz applications.
- These curves are comprehensive for series NRX NF&RF(IZMX16/40) circuit breakers including all frame sizes, ratings, and constructions.

IZMX Series Air Circuit Breakers

Tripping Characteristics

IZMX16(40)…V(U)… PXR20/25 Long Delay(L) Curves

L-Protection: I^4t -Characteristic curve

Notes:

- This curve shown as a multiple of the LONG PU setting(I_r). The actual pickup point occurs at 110% of the I_r , with $\pm 5\%$ tolerance.
- SDPU = 1.5x to 10x of I_r , have $100\% \pm 10\%$ tolerance.
- LD Time = 0.5s to 24s, have $100\% +0 / -30\%$ tolerance.
- SD Slope = I^2T . The short pickup points have $\pm 10\%$ tolerance.
time setting from 0.1s to 0.5s, with steps of 0.1s, except 0.2s.
tolerance is $100\% +0 / -30\%$ except 0.1s, has tolerance $100\% +0 / -40\%$.
- I^2T slopes flattens out at 8x of I_r , for top of band with FLAT time minimum value prevailing for bottom of band. For all curves the lower flat response time value projected to I^2T line will determine the other break point and shape of the curve.
- If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
- Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
- This curve is for 50Hz, 60Hz applications.
- These curves are comprehensive for series NXR NF&RF(IZMX16/40) circuit breakers including all frame sizes, ratings, and constructions.
The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

5000	0.700	0.940

Notes

Series NRX (IZMX) circuit breakers can be applied at their full voltage and current ratings up to a maximum altitude of 2000 meters above sea level. When installed at higher altitudes, the ratings are subject to correction factors. Short circuit current is not affected as long as the voltage is rated in accordance with the table.

Minimum Clearances

Recommended safety clearances

The following information about safety distances is intended to provide a guideline for the installation of circuit-breakers in an enclosure.

	Enclosure clearance	To insulated surface mm	To grounded metal surface mm	With cell switch or locking facilities mm
Withdrawable	a	0	0	0
	b	25	25	25/75
Fixed	a	150	250	—
	b	30	70	—

Recommended enclosure clearance and ventilation

The illustration shows a typical enclosure.

The table below lists the associated minimum distances between enclosures and ventilation openings.

This information is intended as a guideline for constructing a suitable circuit-breaker enclosure. Ensure the integration complies with IEC 61439.

c	Width of cassette + 75 mm
d	550 mm
e	450 mm (front control panel bay)
Ventilation holes	160 cm ² (800 - 3200 A) } Top and bottom 320 cm ² (4000 A) }

④ Top or rear vent

⑤ Rear or lower vent

Electrically operated standard device includes:

Fixed parent breaker, including 2a2b Aux contact, Main terminal adapter – horizontal (3200A and below), 208-250 VAC/DC Charging motor, 220-240 VAC/DC Shunt trip, 220-240 VAC/DC Closing spring release, Additional 2a2b Aux contact (4a4b total), Over current trip switch(OTS) 2C0, External power module to converter 220VAC to 24VDC to power trip unit.

IZMX Series Air Circuit Breakers
Notes

New Generation Air Circuit Breaker IZM99

Breaker Catalog Number

IZM9 Series Air Circuit Breaker Catalog Number (IZM9-W or IZM9-F)

Fixed type

Standard IZM99 basic device includes: fixed circuit breaker's basic device, wiring terminal, auxiliary contact (4a4b), door escutcheon, 220VAC/DC power supply module

Withdrawable type

Standard IZM99 basic device includes: withdrawable circuit breaker's basic device, wiring terminal, auxiliary contact (4a4b), door escutcheon, 220VAC/DC power supply module

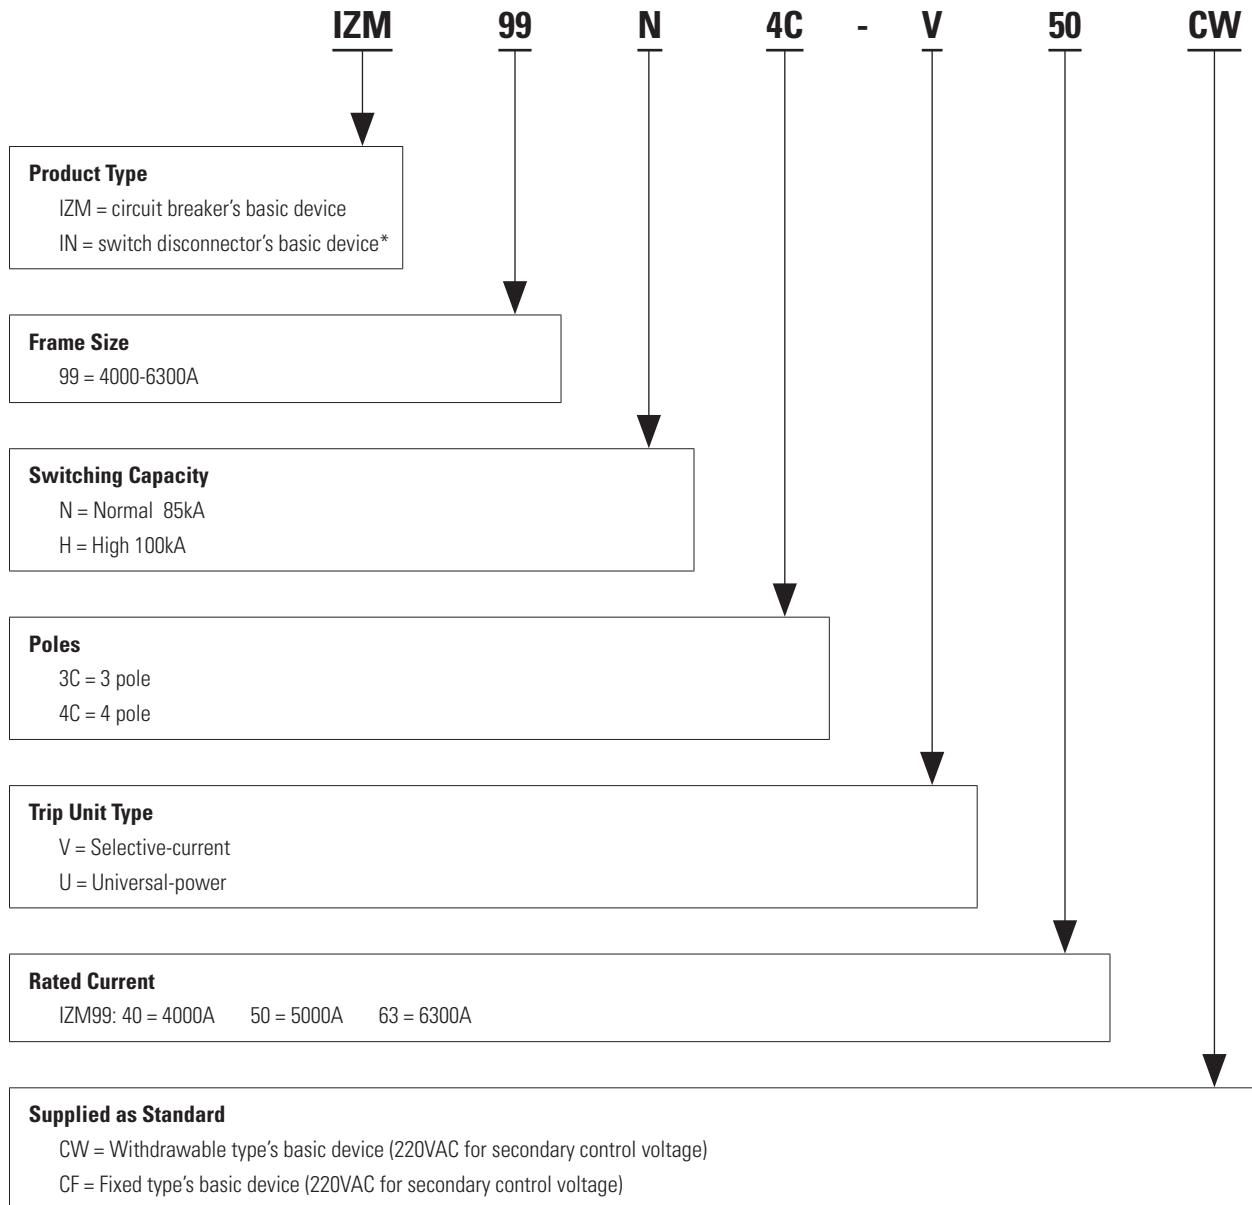

Note: IZM99-W/F includes horizontal main terminals

IZM99-W/F only provide the necessary control terminals as required

New Generation Air Circuit Breaker IZM99

Breaker Catalog Number

IZM9 Series Air Circuit Breaker Catalog Number (Supplied As standard) (IZM9-CW or IZM9-CF)

Fixed type

Standard fixed type basic device includes: fixed circuit breaker basic device, shunt release (220V AD), closing release (220V AD), motor operator (220V AC), auxiliary contact (4a4b), trip signal auxiliary contact OTS (2a2b), door escutcheon, wiring terminal, 220VAC/DC power supply module

Withdrawable type

Standard withdrawable type basic device includes: withdrawable circuit breaker basic device, shunt release (220V AD), closing release (220V AD), motor operator (220VAC), auxiliary contact (4a4b), trip signal auxiliary contact OTS (2a2b), door escutcheon, wiring terminal, 220VAC/DC power supply module, protection shutter, arc chamber cover, cassette, handle

Note: CW/CF is dedicated to 220VAC control voltage, one tailored type under W/F, so W/F is marked on the nametag of the circuit breaker's basic device, rather than CW/CF
IZM99-CW/CF includes horizontal main terminals
IZM99-CW/CF only provide the necessary control terminals as required

New Generation Air Circuit Breaker IZM99

Breaker Technical Data

IZM99/IN99²⁾

General

Standards	IEC/EN 60947		
Ambient temperature	Storage	°C	-25 - 85
	Operating (open)	°C	-25 - 85
Mounting position			
Utilization category	B		
Protection type	IP20		
Environment humidity	Comply with GB / T2423.4 Alternating Humidity and Heat Test +55 °C, Relative Humidity 95%, Non-condensing (exceeding standards, cabinet needs to be protected)		
Direction of incoming supply	as required		

Switching capacity

Rated Current (I_n)	4000A, 5000A, 6300A		
Type of circuit breaker	N	H	
Rated impulse withstand voltage (U_{imp} , VAC)	12000	12000	
Rated insulation voltage (U_i , VAC)	1000	1000	
Rated operational voltage (U_e , VAC)	690	690	
Ultimate breaking capacity (I_{cu} , kA)	440V 50/60Hz 690V 50/60Hz	85 85	100 100
Rated service breaking capacity (I_{cs} , kA)	440V 50/60Hz 690V 50/60Hz	85 85	100 100
Rated short-time withstand current (I_{cw} , kA)	1s	85	100
Rated short-circuit making capacity (I_{cm} , kA)	440V 50/60Hz 690V 50/60Hz	187 187	220 220
Operating delays (ms)	Closing delay Opening delay	35 30	
Maximum operating frequency (Operations/h)	60		

Durability and installation characteristics

Lifespan	4000-6300A

New Generation Air Circuit Breaker IZM99

System Overview

IZM99 Circuit-breakers and Accessori

New Generation Air Circuit Breaker IZM99

System Overview

1	IZM99 air circuit breaker	9	Key locking Locking of the breaker by a keylock.	16	Motor operator To store energy for closing release
2	Communication modules Profibus DP, Ethernet and Modbus onboard	10	Button cover Plastic or metal	17	Red-pop trip indicator Red-pop trip indicator signals a trip by the trip unit Included in breaker with trip unit Trip signal auxiliary contact OTS, 2CO
3	Main circuit wiring terminal Vertical wiring terminal 3/4P Front wiring terminal 3/4P	11	Switching operations counters Counts the number of operations	18	Shunt releases Opens the breaker by an electrical signal.
4	Cassette	12	Trip unit PXR20, V-type, current metering PXR25, U-type, power metering Cannot be ordered separately	19	Closing releases Closes the breaker by an electrical signal.
5	Secondary circuit wiring terminal 8, 20, 30 secondary circuit wiring terminals can be ordered	13	Current sensor for neutral conductor Current sensor for sensing the neutral-conductor current.	20	Undervoltage releases Opens the breaker by a voltage-drop in the control circuit
6	Position cell switches Cell switch signals the position of the breaker inside of the cassette. Connect, Test and Disconnect Position	14	Levering tool Lev-in tool to move the breaker in and out of the cassette. Standard Omega shaped handle is included in D/O breaker		
7	Latch check switch For external application Usage For use with closing release	15	Door escutcheon Closes the gap between Breaker and Switchgear-door. IP31 included in breaker For IP54		
8	Standard auxiliary contact Signaling switch ON-OFF. 4 ONs and 4 OFFs standard. 12 ONs and 12 OFFs maximum

New Generation Air Circuit Breaker IZM99

Selectivity

- I_n Rated operational current
- I_u Rated uninterrupted current
- I_{cu} Rated short-circuit breaking capacity
- I_s Set value non-delayed short-circuit releases

Selectivity 415 V AC

Between circuit-breakers enables the separate disconnection of faulty system sections. Selectivity exists between incoming circuitbreaker 1 and outgoing circuit-breaker 2 if, only outgoing breaker 2 trips at position 2 during a short-circuit. System sections 3 and 4 remain operational.

Selection:

Provided that the short-circuit current does not exceed those values specified ($I_{cc\ rms}$).

These details represent the limits of selectivity. Both circuit-breakers will switch off with higher short-circuit currents. On IZM circuit-breakers with V, U releases, the delay time t_{sd} must be at least 100 ms longer than the delay time of the next downstream levels (2, 3, 4).

Incoming circuit breaker (1)		IZM99...-V						IZM99...-U

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Long Delay(L) and Short Delay(S) Curves
L-Protection: I^2t -Characteristic curve and S-Protection: Flat characteristic curve

Notes:

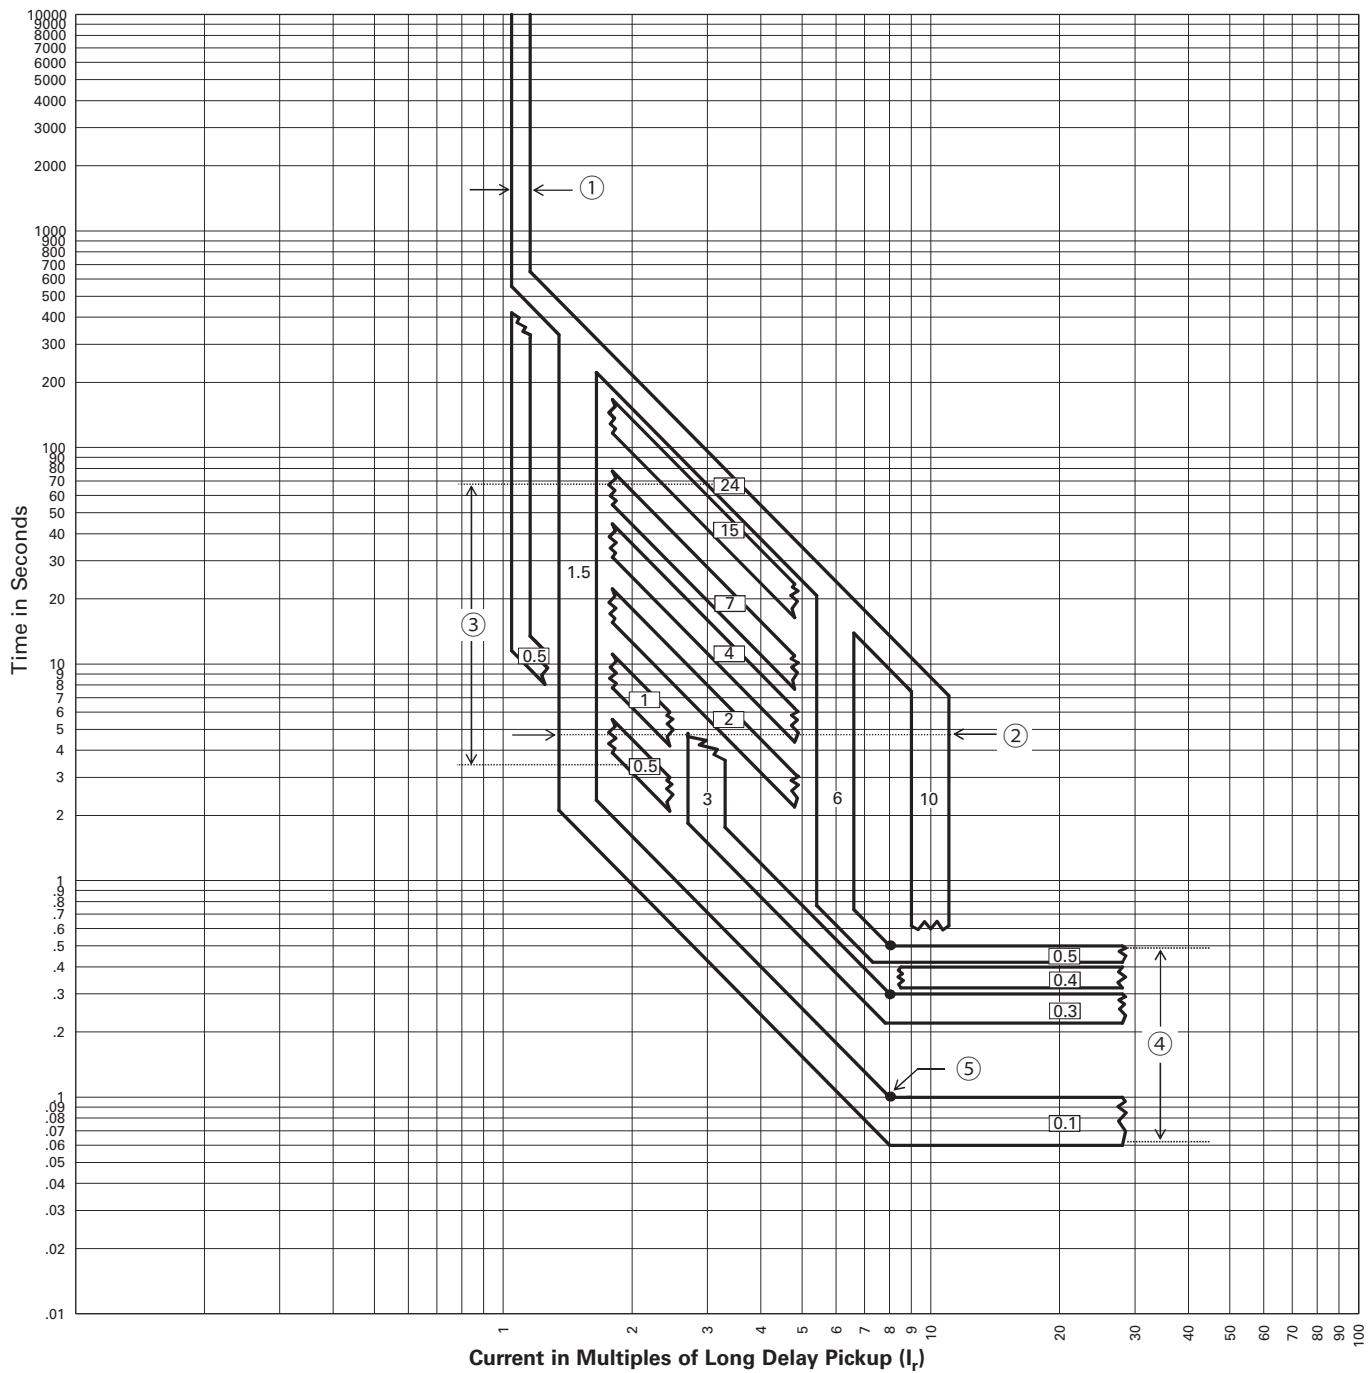

1. Short slope: Flat, the actual pickup point has $100\% \pm 10\%$ tolerance.
2. Long delay I^2T slopes flattens out at 6x of I_r .
3. Short time delay from 0(50ms) to 0.5s, with $+0/-80\text{ms}$ tolerance except 0.1s and 0s setting
0s setting, trip time is 0.06s to 0.1s
0s setting, nominal clear time is 60ms with auxiliary power and 120ms without.
4. If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
5. Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
6. This curve is for 50Hz, 60Hz applications.
7. These curves are comprehensive for series IZM99 circuit breakers including all frame sizes, ratings, and constructions.
The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Long Delay(L) and Short Delay(S) Curves

S-Protection with: I^2t -Characteristic curve ON

Notes:

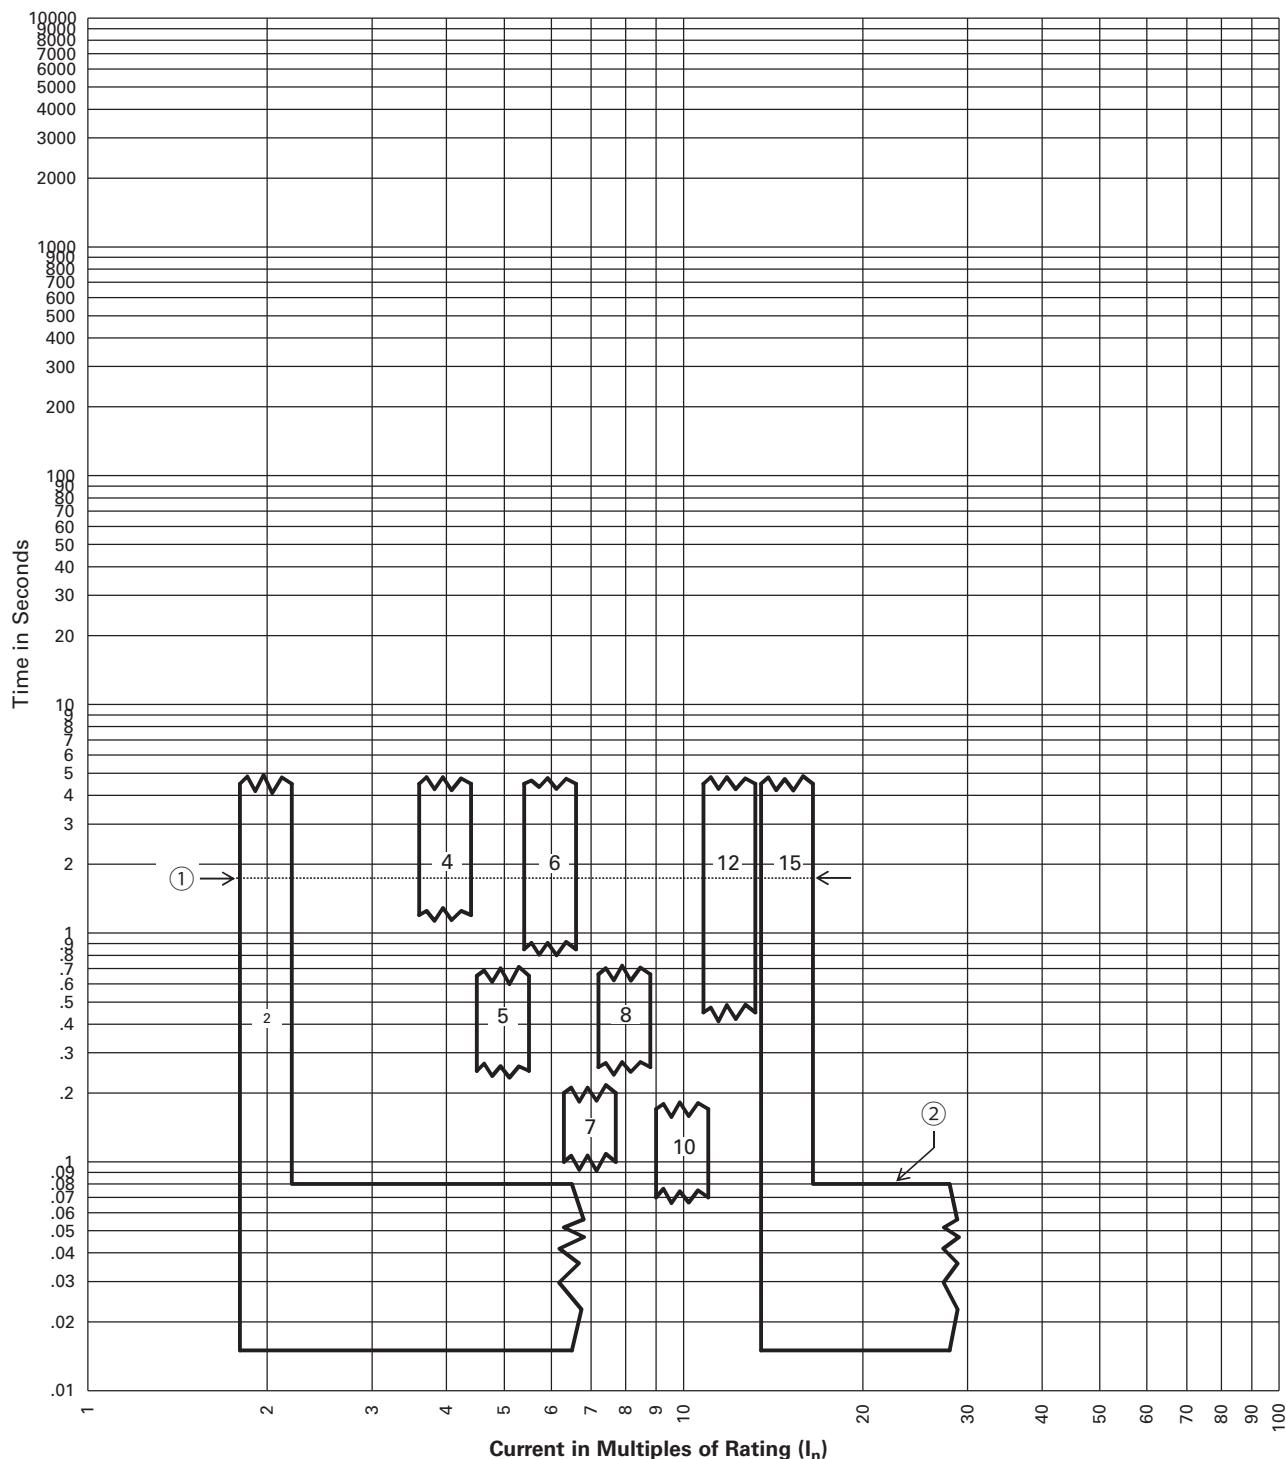

1. This curve shown as a multiple of the LONG PU setting(I_r). The actual pickup point occurs at 110% of the I_r , with $\pm 5\%$ tolerance.
2. SDPU = 1.5x to 10x of I_r , have $100\% \pm 10\%$ tolerance.
3. LD Time = 0.5s to 24s, have $100\% +0 / -30\%$ tolerance.
4. SD Slope = I^2T . The short pickup points have $\pm 10\%$ tolerance.
time setting from 0.1s to 0.5s, with steps of 0.1s, except 0.2s.
tolerance is $100\% +0 / -30\%$ except 0.1s, has tolerance $100\% +0 / -40\%$.
5. I^2T slopes flattens out at 8x of I_r for top of band with FLAT time minimum value prevailing for bottom of band. For all curves the lower flat response time value projected to I^2T line will determine the other break point and shape of the curve.
6. If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
7. Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
8. This curve is for 50Hz, 60Hz applications.
9. These curves are comprehensive for series IZM99 circuit breakers including all frame sizes, ratings, and constructions.

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Instantaneous(I) Curves

I-Protection: Adjustable

Notes:

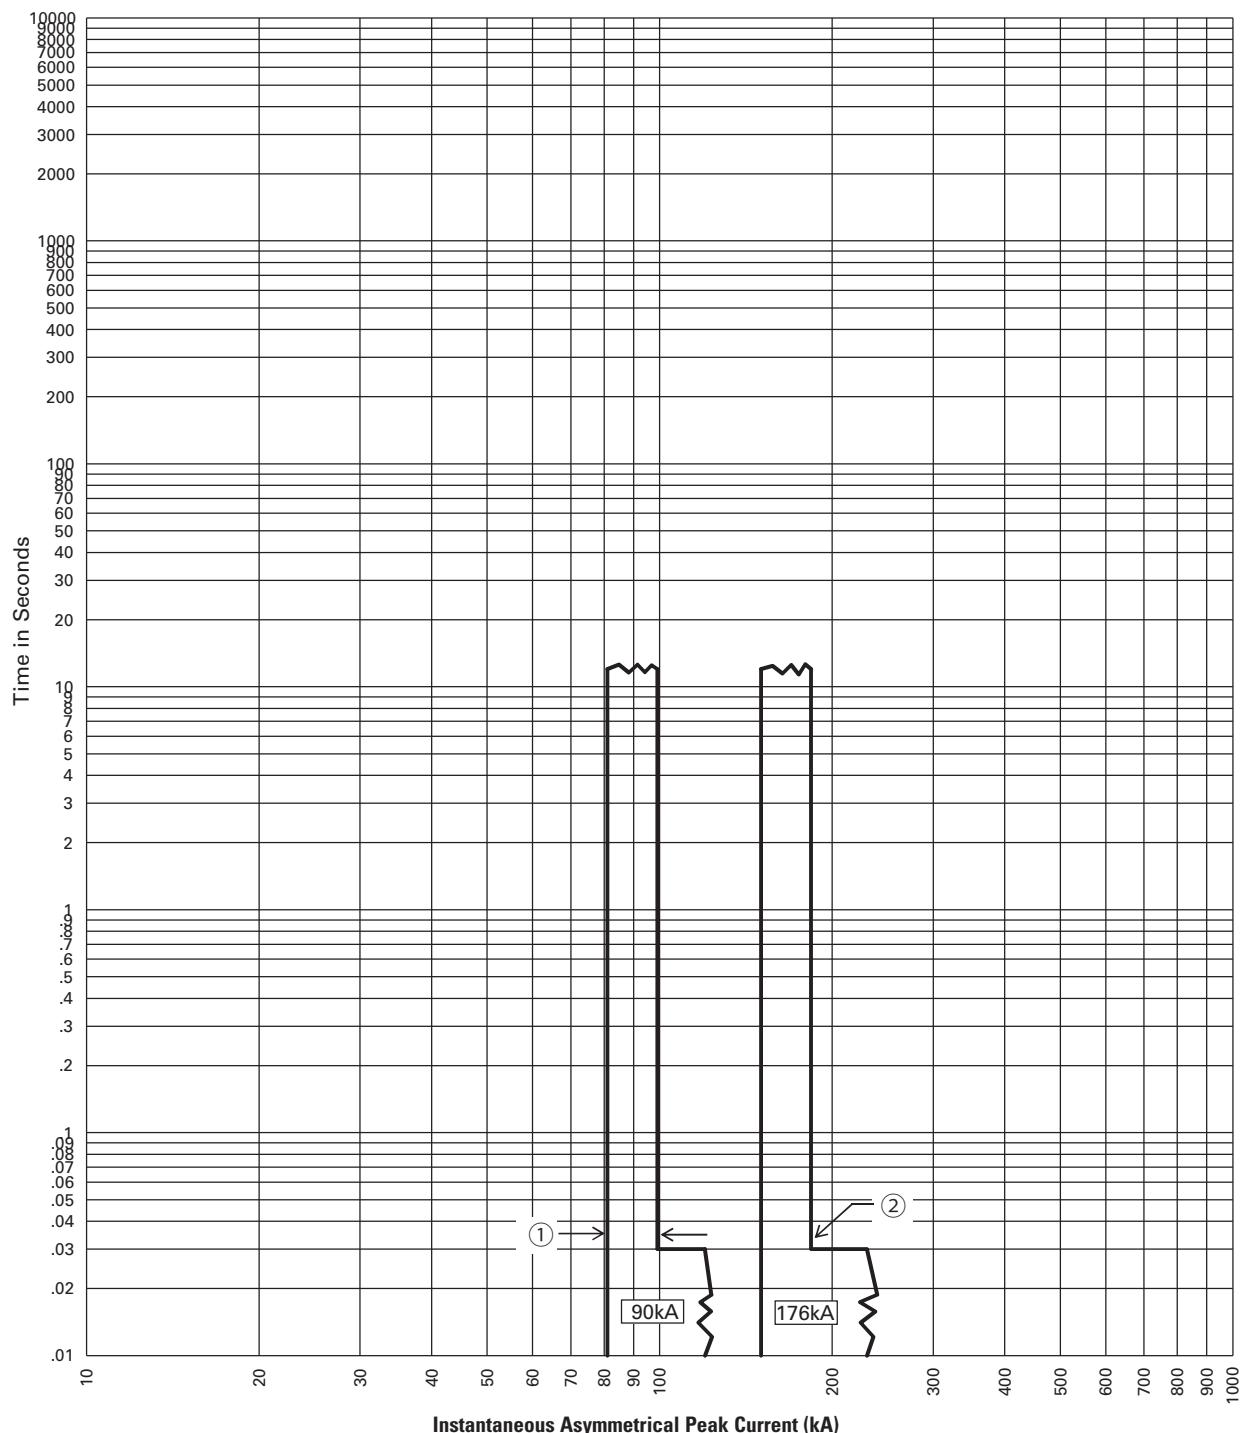

1. The Instantaneous settings have conventional $100\% \pm 10\%$ as the pickup points.
2. The nominal Instantaneous trip time is 60ms with auxiliary power supply and 100ms without.
3. Instantaneous protection could be disabled by setting Instantaneous PU switch to OFF position.
4. The curve is shown as a multiple of the Current Rating (I_n).
5. The end of the curve is determined by the interrupting rating of the circuit breaker.
6. Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
7. This curve is for 50Hz, 60Hz applications.
8. These curves are comprehensive for series IZM99 circuit breakers including all frame sizes, ratings, and constructions.
The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Instantaneous(I) Curves

Instantaneous Trip at High Fault Currents

Notes:

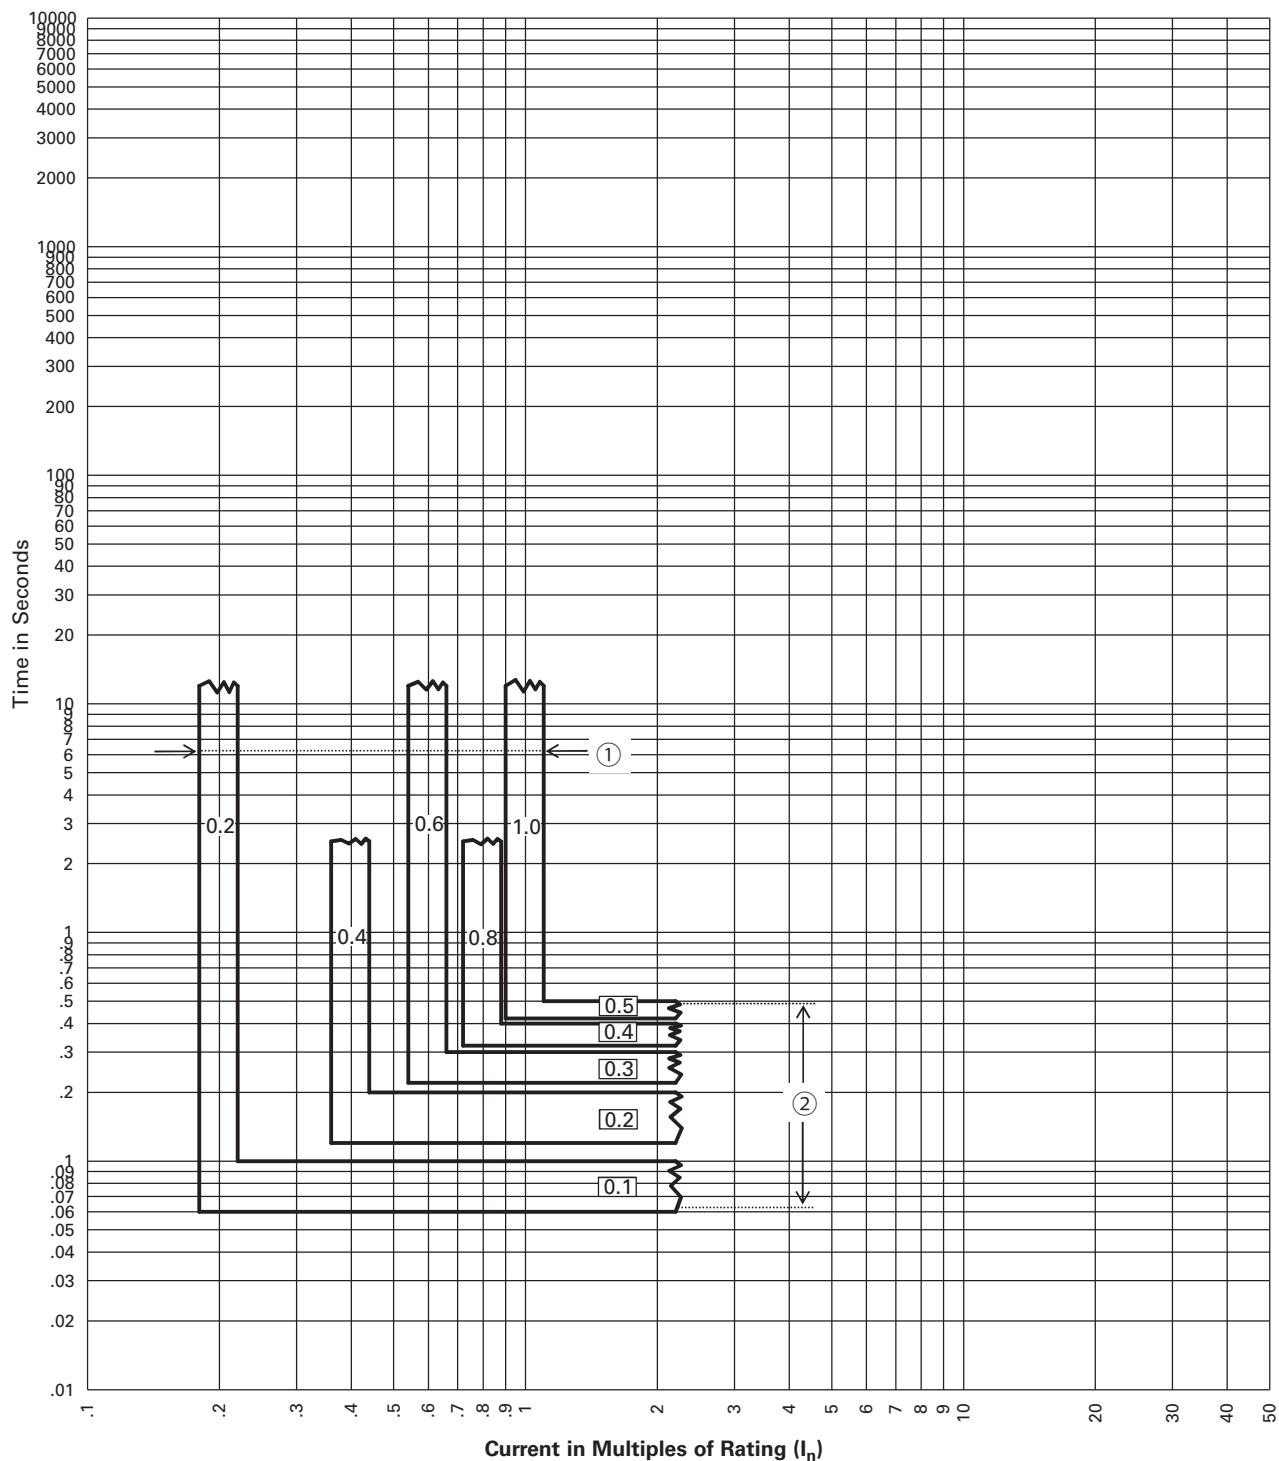

1. The peak current level setting for IZM99 is fixed at 176kA.
2. This protection is functional even when the Instantaneous is set to the OFF position.
3. The PXR will light the Instantaneous LED for a High Instantaneous trip.
4. The total Instantaneous clearing times shown are conservative and consider the maximum response times of the trip unit, the circuit breaker opening, and the interruption of the current under factors that contribute to worst case conditions, like: maximum rated voltages, single phase interruption, and minimum power factor. Faster clearing times are possible depending on the specific system conditions, the type of circuit breaker applied, and if any arc reduction settings are employed.

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Ground(G) Curves

G: Ground fault protection - Flat characteristic curve

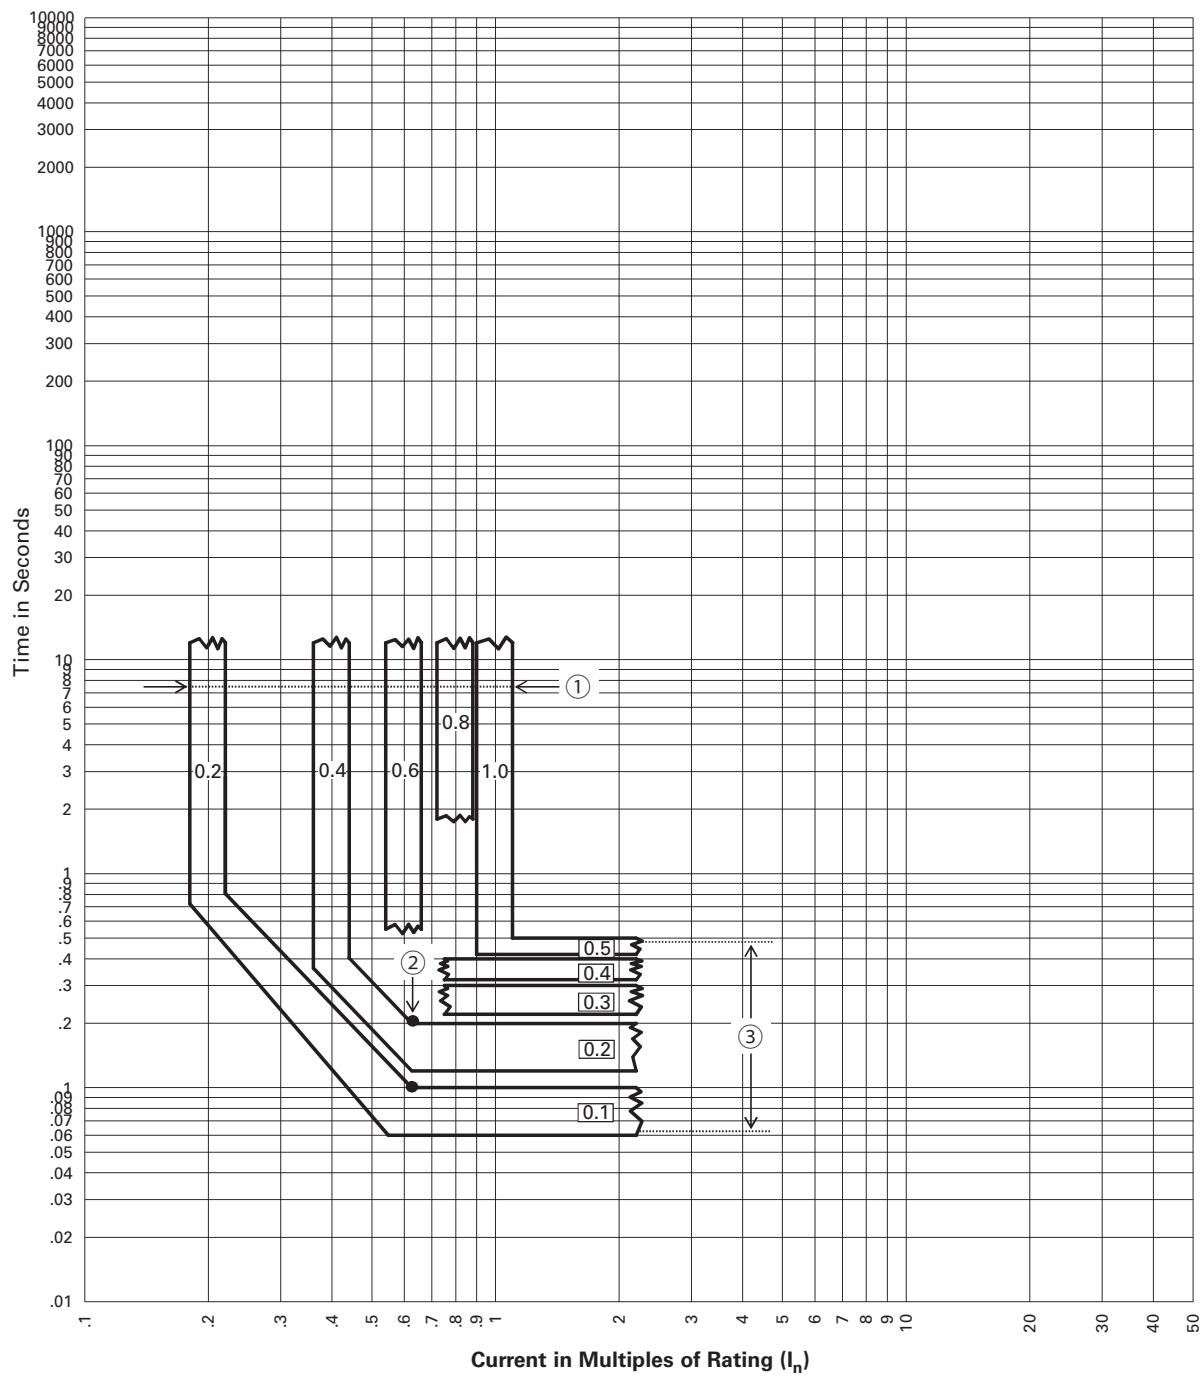

Notes:

1. Ground PU setting from 0.2 to 1.0 of I_n with steps of 0.2, have tolerance of 100% \pm 10%.
2. Ground Flat time from 0.1s to 0.5s, with 0.1s increments.
3. Ground slope: Flat, trip time tolerance is +0 / -80ms for all settings except 0.1s setting is 0.06s to 0.1s.
4. The curve is shown as a multiple of the Current Rating (I_n).
5. The end of the curve is determined by the interrupting rating of the circuit breaker.
6. Curves applies from -20°C to +50°C ambient. Temperatures above +85°C will cause over temperature trip.
7. This curve is for 50Hz, 60Hz applications.
8. These curves are comprehensive for series IZM99 breakers including all frame sizes, ratings, and constructions.
The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Ground(G) Curves
G: Ground fault protection- I^2t -Characteristic curve ON

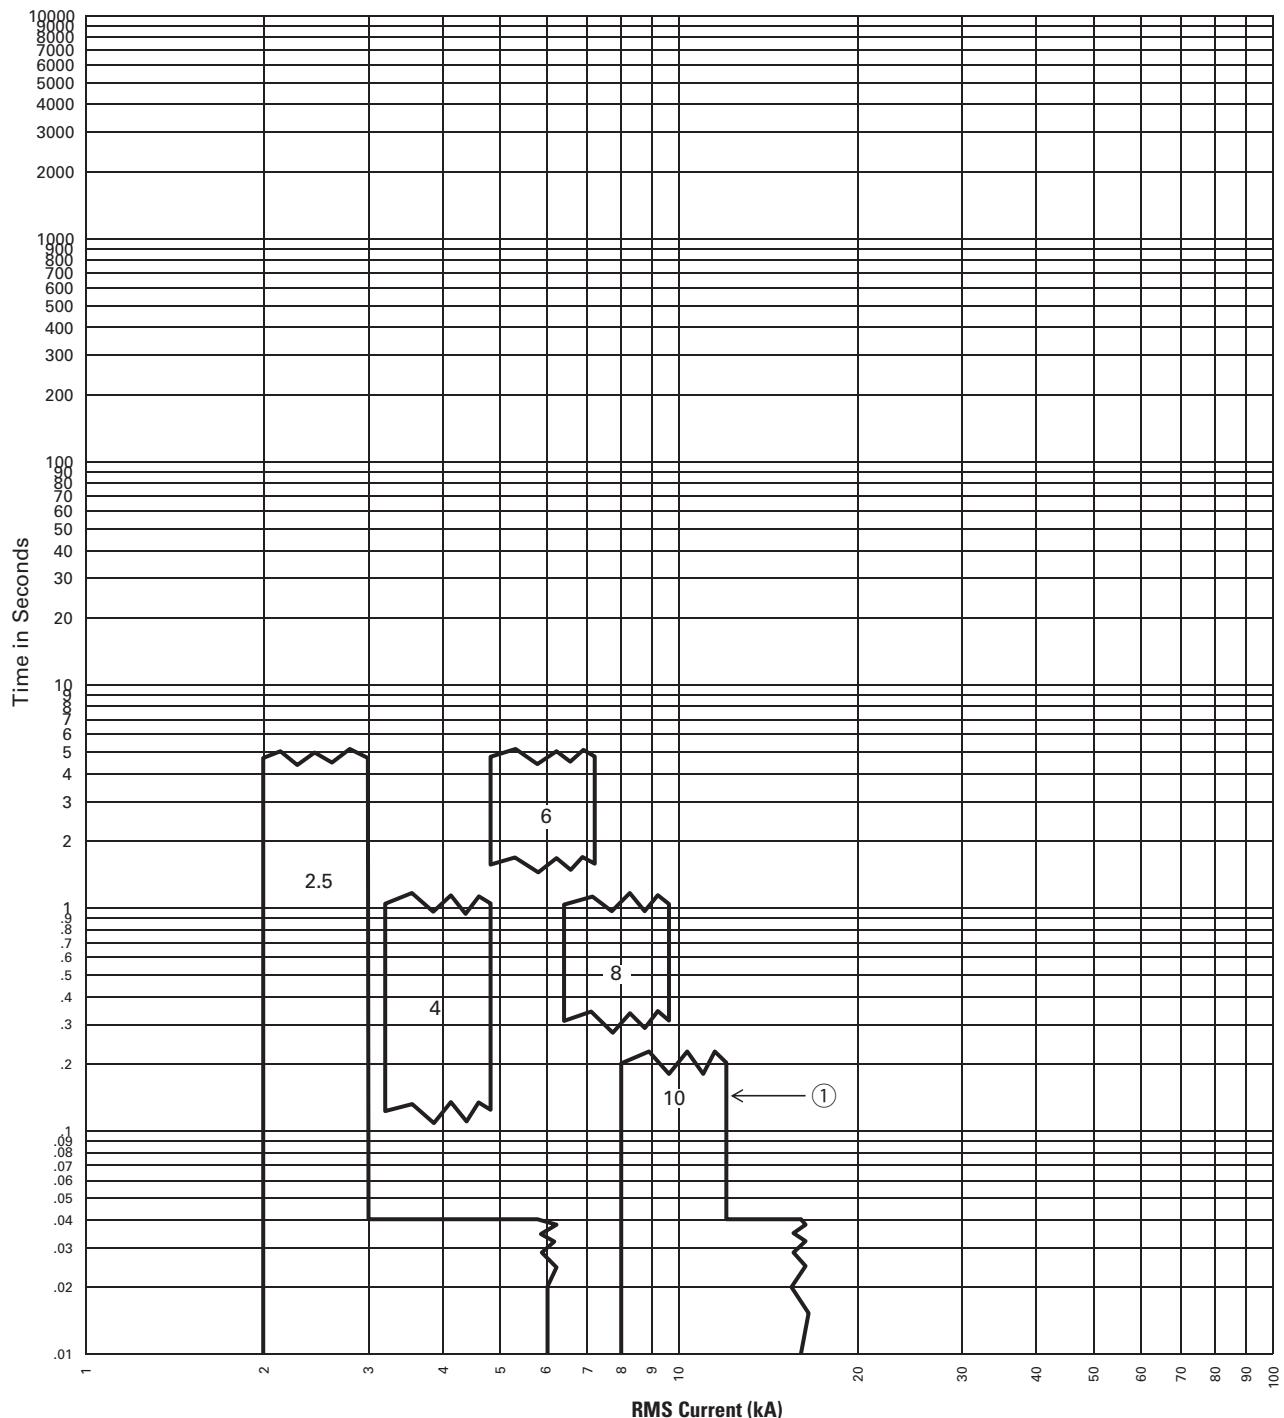

Notes:

1. Ground PU setting from 0.2 to 1.0 of I_n with steps of 0.2 , have tolerance of $100\% \pm 10\%$.
2. Peak points at $0.625 \times I_n$ to flat.
3. Ground I^2T time from 0.1s to 0.5s, with 0.1s increments.
4. Ground slope: Flat, trip time tolerance is $+0 / -80\text{ms}$ for all settings except 0.1s setting is $0.06\text{s} \text{ to } 0.1\text{s}$.
 Ground slope: I^2T , tolerance is
 0.1s, 0.2s : $+0 / -40\%$
 0.3s, 0.4s, 0.5s : $+0 / -30\%$
5. The curve is shown as a multiple of the Current Rating (I_n).
6. The end of the curve is determined by the interrupting rating of the circuit breaker.
7. Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
8. This curve is for 50Hz ,60Hz applications.
9. These curves are comprehensive for series IZM99 circuit breakers including all frame sizes, ratings, and constructions.
 The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Maintenance Mode Curve
Arc-flash Reduction Maintenance Mode for IZM99

Notes:

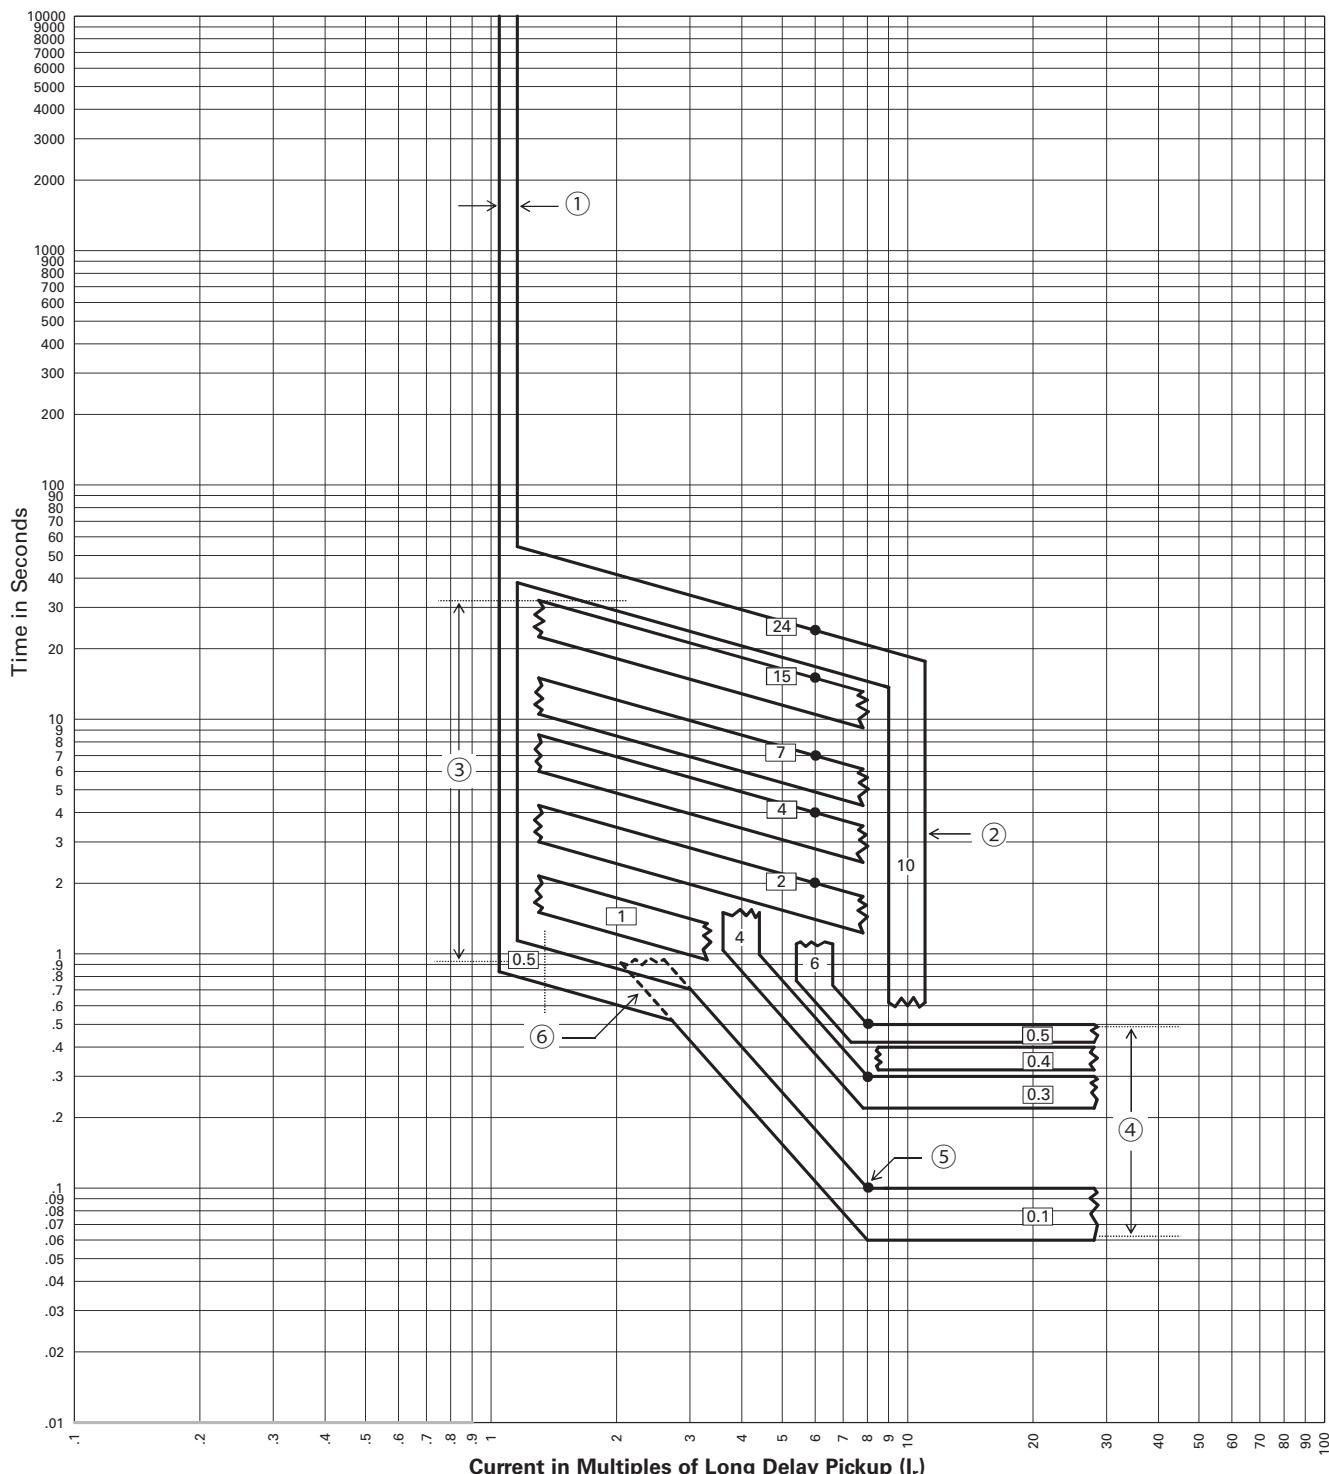

1. Nominal reduction values have a tolerance of $\pm 20\%$.
2. The nominal ARMs trip time is 40ms with auxiliary power supply.
3. The Maintenance Mode feature must be ENABLED via setting Maintenance Mode switch to ON position remote switch, or communications for these curves to apply. Maintenance Mode is in use being shown by blue LED.
4. The PXR will light the Instantaneous LED for a Maintenance Mode Trip.
5. The end of the curve is determined by the interrupting rating of the circuit breaker.
6. Curves applies from -20°C to +50°C ambient. Temperatures above +85°C will cause over temperature trip.
7. This curve is for 50Hz ,60Hz applications.
8. These curves are comprehensive for series IZM99 circuit breakers including all frame sizes, ratings, and constructions. The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

New Generation Air Circuit Breaker IZM99

Tripping Curves

IZM99...V(U)...PXR20/25 Long Delay(L) Curves

L-Protection: $I^{0.5}t$ -Characteristic curve

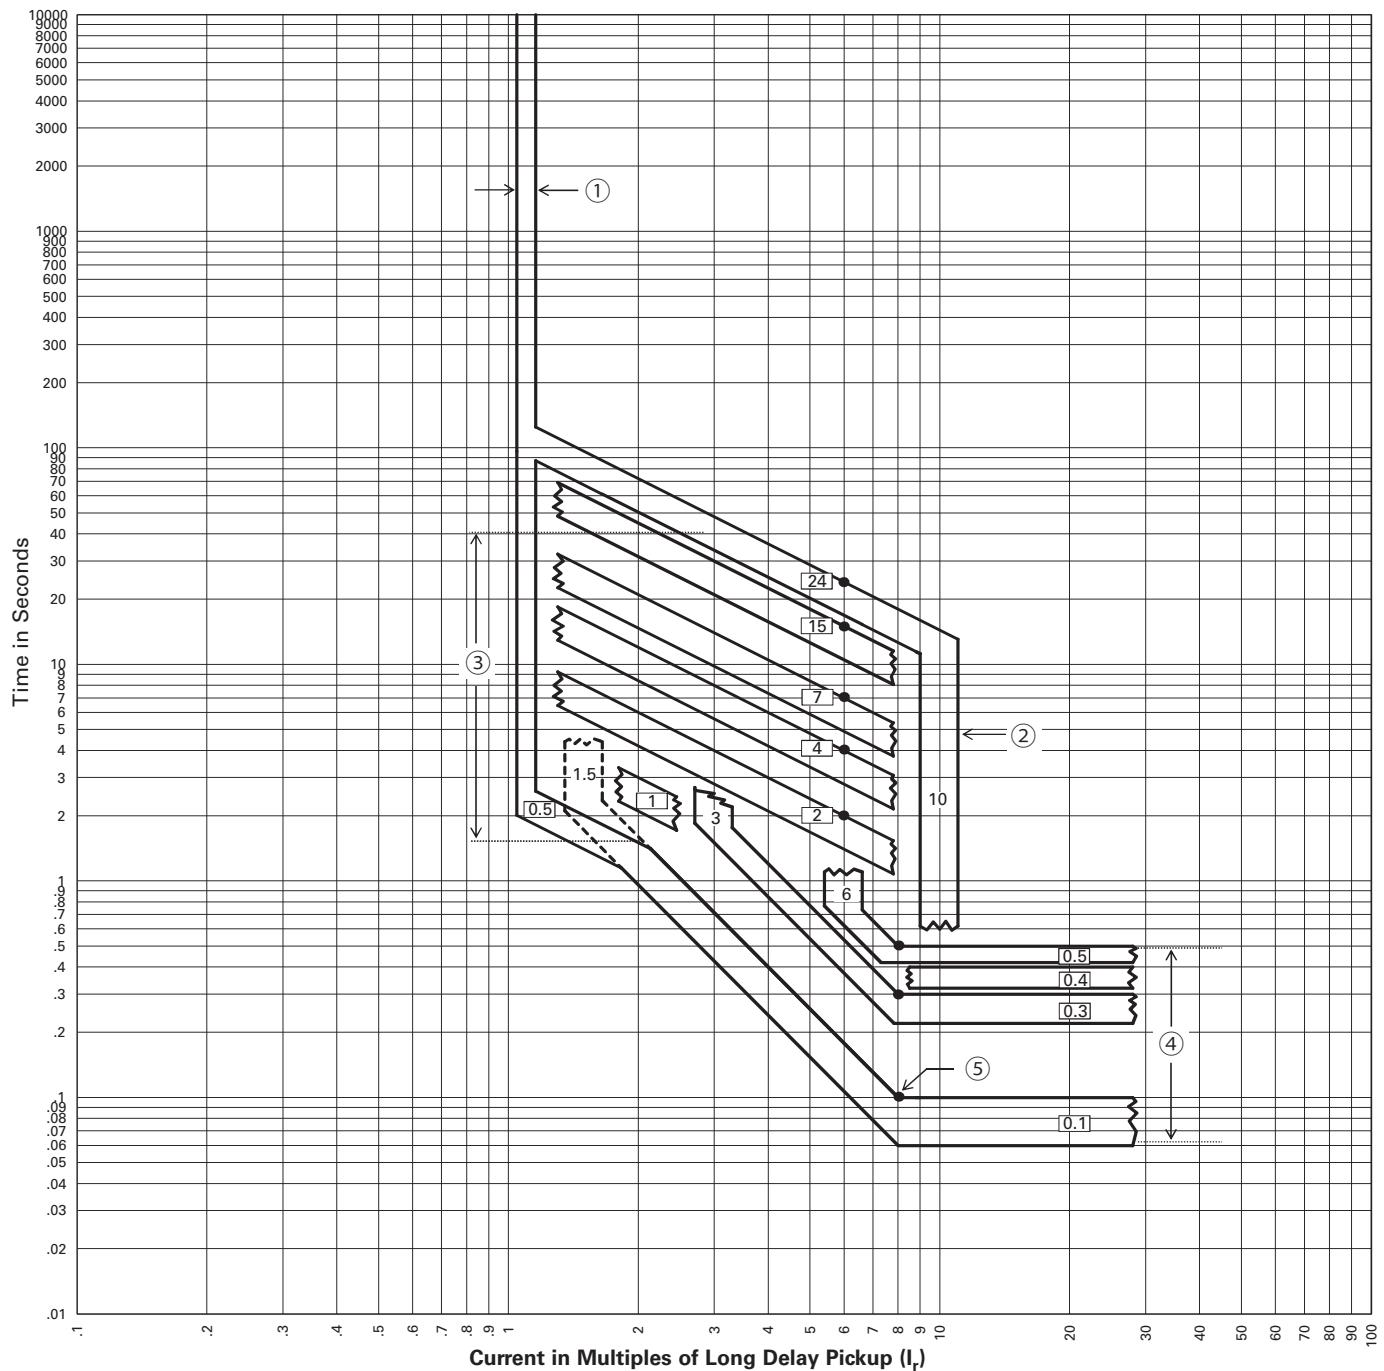

Notes:

1. This curve shown as a multiple of the LONG PU setting (I_r). The actual pickup point occurs at 110% of the I_r , with $\pm 5\%$ tolerance.
2. SDPU = 1.5x to 10x of I_r , have $100\% \pm 10\%$ tolerance.
3. LD Time = 0.5s to 24s, have $100\% +0 / -30\%$ tolerance.
4. SD Slope = $I^0.5T$. The short pickup points have $\pm 10\%$ tolerance. time setting from 0.1s to 0.5s, with steps of 0.1s, except 0.2s.
tolerance is $100\% +0 / -30\%$ except 0.1s, has tolerance $100\% +0 / -40\%$.
5. $I^0.5T$ slopes flattens out at 8x of I_r for top of band with FLAT time minimum value prevailing for bottom of band. For all curves the lower flat response time value projected to $I^0.5T$ line will determine the other break point and shape of the curve.
6. If the short delay time is longer than long delay time, the short delay trip time will follow the long time setting.
7. If long delay thermal memory is enabled, trip times may be shorter than indicated in this chart.
8. Curves applies from -20°C to $+50^\circ\text{C}$ ambient. Temperatures above $+85^\circ\text{C}$ will cause over temperature trip.
9. This curve is for 50Hz, 60Hz applications.
10. These curves are comprehensive for series IZM99 circuit breakers including all frame sizes, ratings, and constructions.
The total clearing times shown include the response time for trip unit, the breaker opening and the interruption of the current.

Notes

IZM9 series circuit breakers can be applied at their full voltage and current ratings up to a maximum altitude of 2000 meters above sea level. When installed at higher altitudes, the ratings are subject to correction factors. Short circuit current is not affected as long as the voltage is rated in accordance with the table.

PXR20&25 wiring diagrams

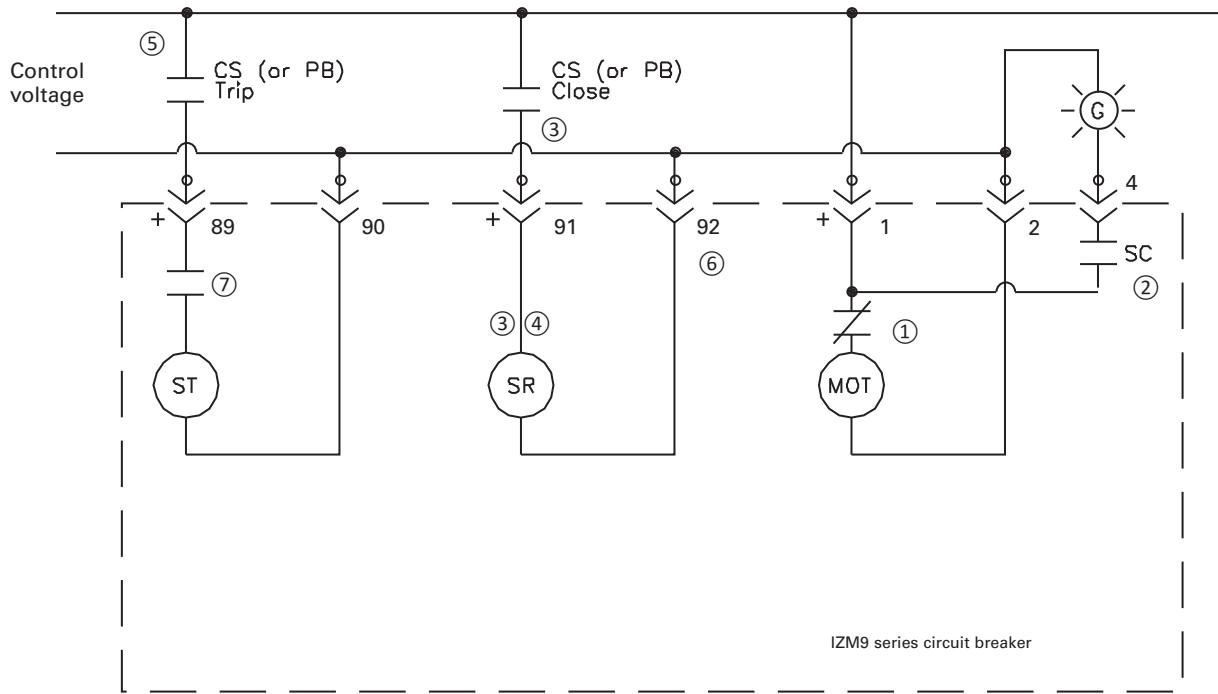

Note 1:

On a 4P circuit breaker, the neutral current sensor has the same style and wiring method as the phase sensor, located within the circuit breaker frame, no need to connect the secondary terminals 11N1, 12N2

New Generation Air Circuit Breaker IZM99

Circuit breaker wiring diagram

Electrical control diagram of IZM 99 circuit breakers – Open/Close and motor

Legend:

MOT – Motor Operator for Charging Closing Spring

ST – Shunt Trip

SR – Spring Release

Description of Operation:

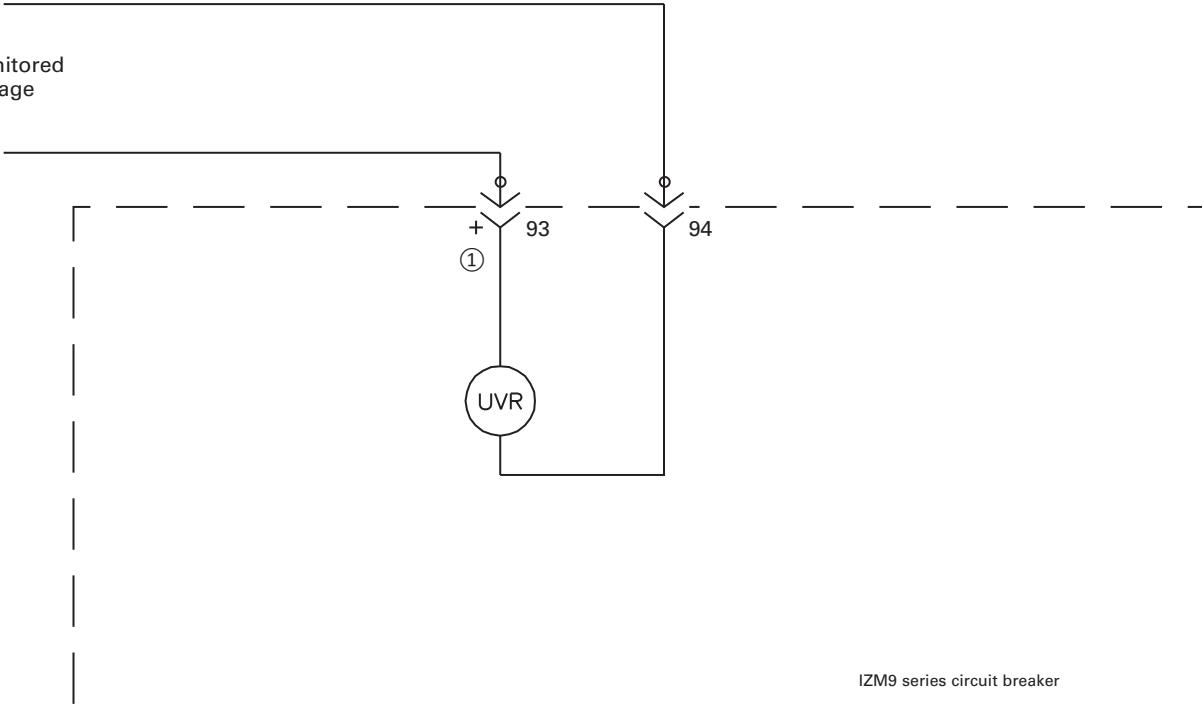

1. The motor is energized and runs, charges closing spring, and is cut off by switch.
2. When the spring is charged, the SC closes and the green indicating light will illuminate (if applicable).
3. Closing the CS-C contact energizes the Spring Release Coil and closes the circuit breaker. The Spring Release internal electronics pulse the SR coil and then provides a high impedance circuit. This provides anti-pumping.
4. When the spring discharges its energy, the motor switch will re-energize the charging motor until the spring is charged again.
5. When the circuit breaker closes, contact ⑦ closes, then energize the Shunt release, the circuit breaker disconnects, and contact ⑦ then breaks.
6. For secondary contacts, odd numbers should be treated as positive for any accessory. This will not apply to AC ratings.
7. ReferencePage 66 for internal circuit breaker wiring.

Circuit breaker wiring diagram

PXR Alarm Wiring

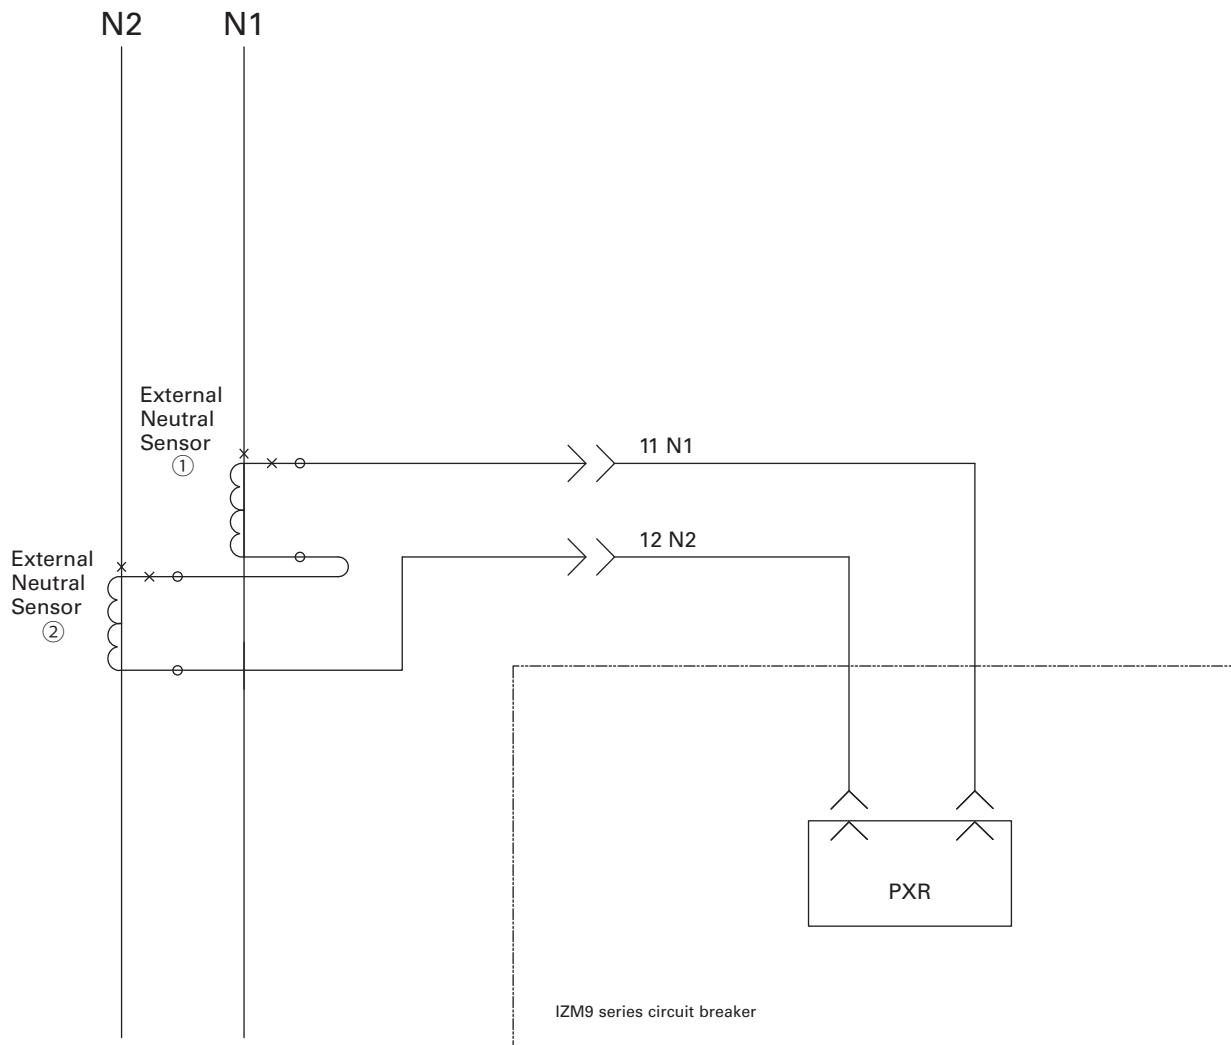

Notes:

1. For the PXR20/25, the Alarm 1 is for Remote Indication/ Maintenance Mode indication. Contact rating 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
2. For the PXR20/25, the Alarm 2 is for High Load alarm/Ground Fault alarm. Contact rating 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
3. For the PXR20/25, the Alarm 3 is for Trip N.O. contact. Contact rating 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
4. If the control voltage is +24 Vdc, the trip unit should be fed from a separate, galvanically isolated + 24 V voltage dc supply.

New Generation Air Circuit Breaker IZM99

Circuit breaker wiring diagram

Ground Fault Residual, 3 pole, 4 pole (IZM99 4000-6300A)

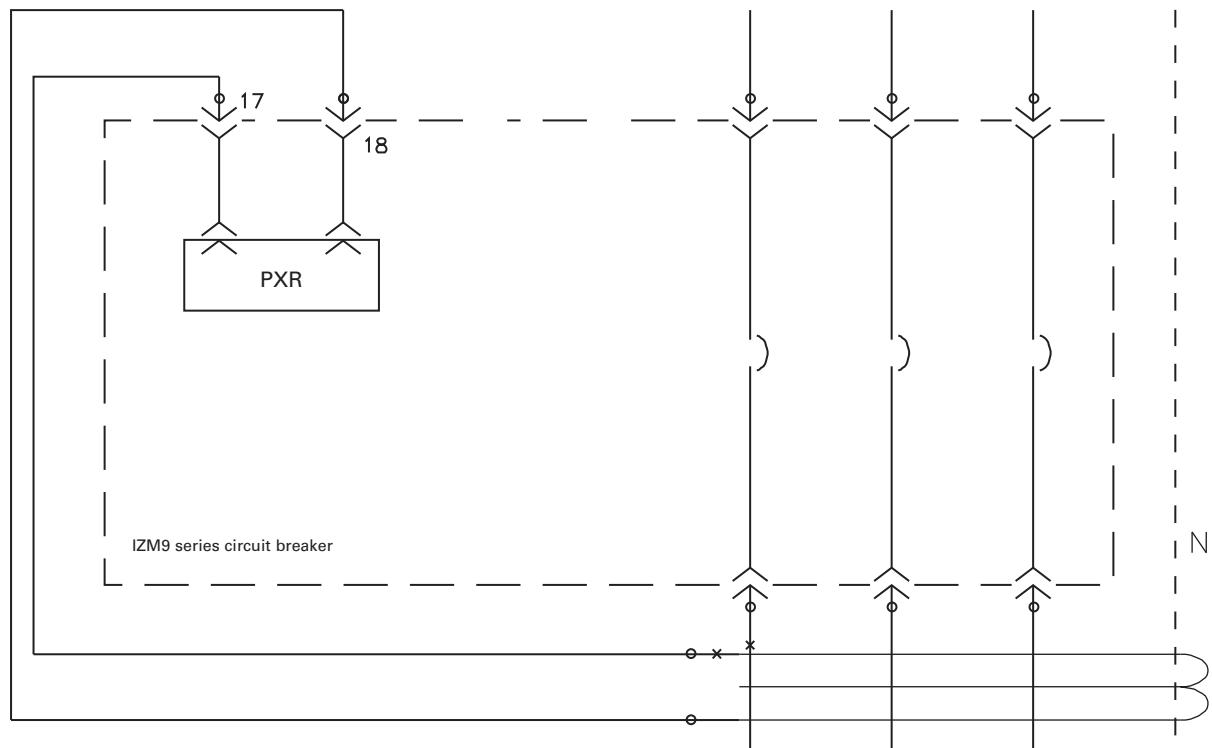

Notes1, 2:

Sensor is customer wired to sense neutral currents. This is required for 3 pole ,4 pole ACB no need to buy the external sensor.
Two external neutral transformers must be purchased for the two N-bars of the IZM99 circuit breakers, with serial connection to 11&12

Circuit breaker wiring diagram

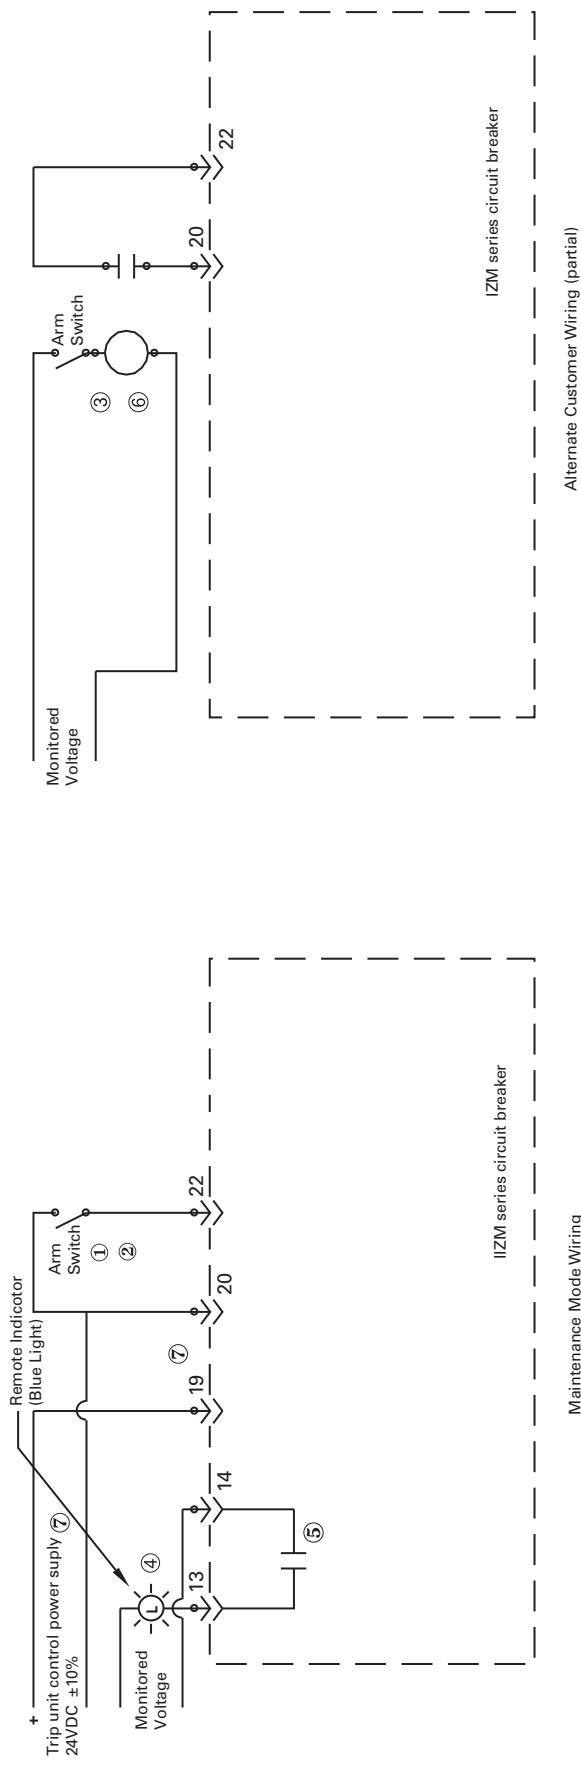

Zero Sequence Ground Fault Sensing

New Generation Air Circuit Breaker IZM99

Circuit breaker wiring diagram

Maintenance Mode Wiring

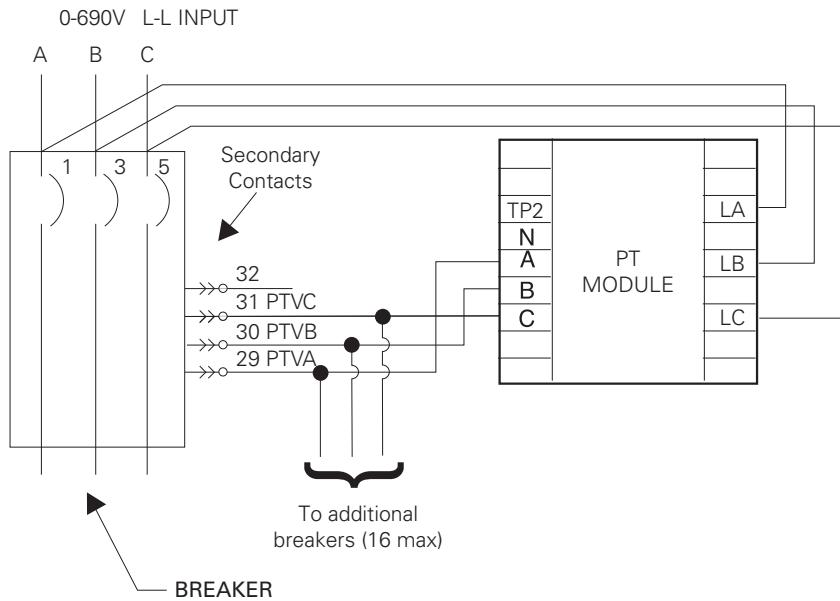

Notes:

- PXR20/25 can locally be placed in Maintenance Mode via a two position switch located on the trip unit. The function can be armed via a remote switch as shown. In addition, the function can be activated via communication modules. A blue LED on the PXR verifies the PXR release in Maintenance Mode.
- The recommended selector switch for this low voltage application is Eaton part number 10250T133-2E which includes a contact block rated for logic level and corrosive use.
- The maximum length of this wiring to remotely arm the switch (or alternate relay contact) is 9.78 feet (3 m). Use #20 AWG wire or larger.
- A remote Stark Light Announcer panel or other remote indication device can be connected to verify that PXR is in the Maintenance Mode.
- The relay in the PXR releases when in Maintenance Mode. Contact is rated 1 A @ 120 Vac, 1 A @ 24 Vdc, and 0.5 A @ 230 Vac.
- The PXR release can also be placed remotely in its Maintenance Mode via a general purpose relay (ice cube type with logic level contacts) and activated by a remote control switch. A recommended type is IDEC Relay RY22. Choose the voltage as desired.
- If a Communication Module is used, The Communication Module will require 24 Vdc power and will provide isolated power to the PXR release in the circuit breaker. If a Communication Module is not used, the PXR release that requires auxiliary voltage for alarms which should be fed from a galvanically isolated, 24 Vdc supply.

Circuit breaker wiring diagram

Zone Interlock Wiring

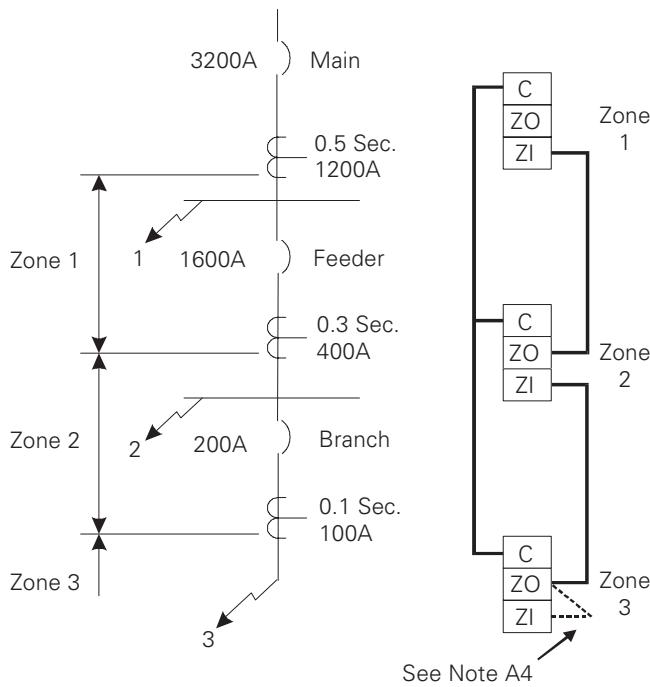

Notes:

1. Twisted together AWG #14 to #20 copper wire. Route the Zone interlock wiring separate from power conductors. DO NOT GROUND any Zone interlock wiring.
2. The maximum distance between two farthest breakers on different zones (from the Z_{in} downstream to the Z_{in} upstream terminals) is 250 feet (75 m).
3. A maximum of 20 breakers may be contained in parallel in one zone.
4. Provide a self interlocking jumper (on Zone 3), if coordination is desired with other downstream breakers not providing the Zone interlock feature.

New Generation Air Circuit Breaker IZM99

Circuit breaker wiring diagram

Typical Zone Interlocking

Notes:

A1: Wiring to be twisted pair of AWG #14 to #20. Route zone interlocking wiring separate from power conductors. DO NOT GROUND any zone interlocking wiring.

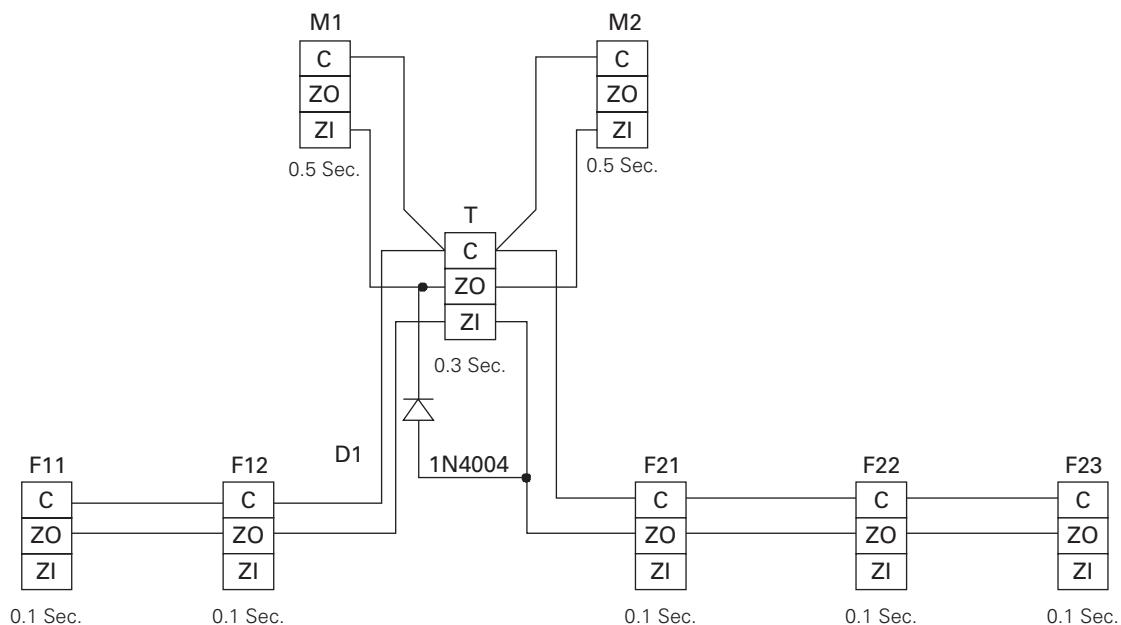

A2: The maximum distance between two farthest breakers on different zones (from the ZO downstream to ZI upstream terminals is 250 feet (76m).

A3: A maximum of 20 breakers may be contained in parallel in one zone.

A4: Provide a self-interlocking jumper (on Zone 3) if coordination is desired with other downstream circuit breakers not providing the zone interlock feature.

C	= Common (ungrounded) – B7—Contact
ZO	= Zone Out output signal to higher level zone – B9—Contact
ZI	= Zone In input signal from lower level zone – B8—Contact
2	= Fault at location 2

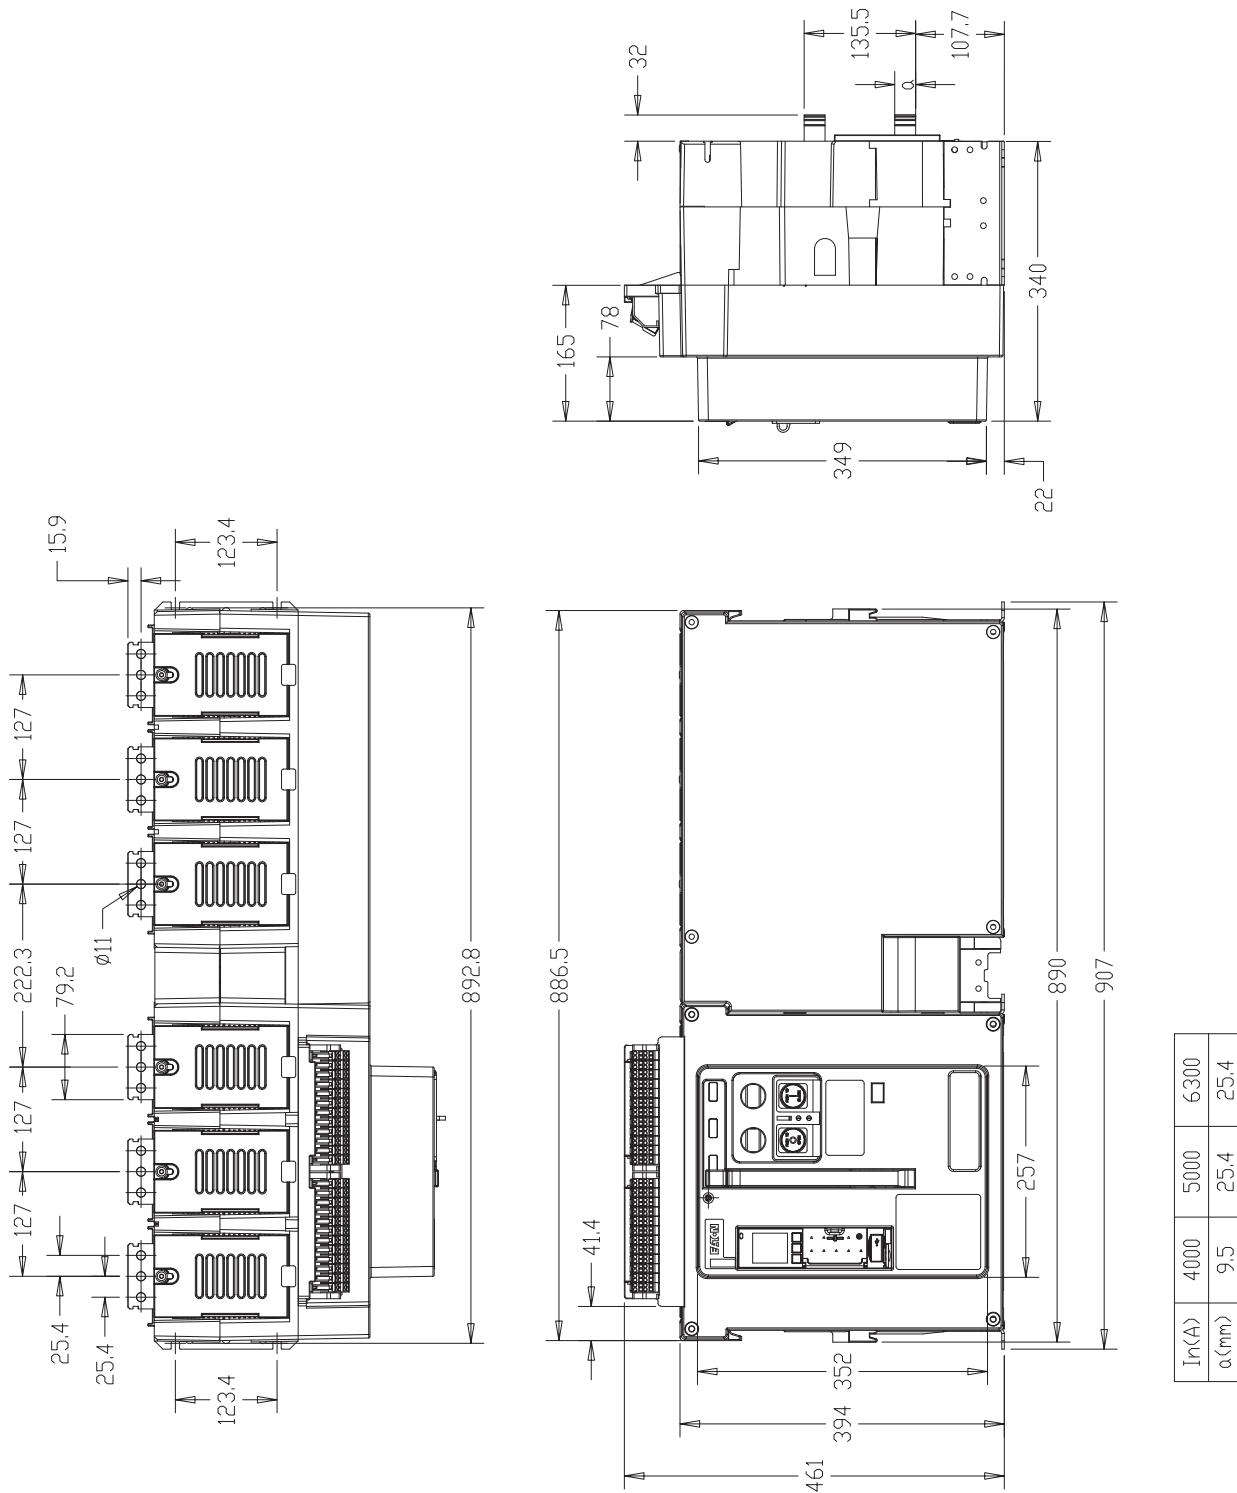

Typical Zone Interlocking Connections with Two Main Breakers (M1, M2) and a Tie Breaker (T)

Minimum Clearances

Recommended safety clearances

The following information about safety distances is intended to provide a guideline for the installation of circuit-breakers in an enclosure.

	Enclosure clearance	To insulated surface mm	To grounded metal surface mm	With cell switch or locking facilities mm
Withdrawable	a	0	0	0
	b	25	25	25/75
Fixed	a	150	250	—
	b	30	70	—

Recommended enclosure clearance and ventilation

The illustration shows a typical enclosure.

The table below lists the associated minimum distances between enclosures and ventilation openings.

This information is intended as a guideline for constructing a suitable circuit-breaker enclosure. Ensure the integration complies with IEC 61439.

c	Width of cassette + 75 mm
d	550 mm
e	450 mm (front control panel bay)
Ventilation holes	160 cm ² (800 - 3200 A) } Top and bottom 320 cm ² (4000 A) }

④ Top or rear vent

⑤ Rear or lower vent

New Generation Air Circuit Breaker IZM99

IZM99 Type Reference List

Standard device includes:

Fixed circuit breaker basic device, shunt release (220V AD), closing release (220V AD), motor operator (220V AC), auxiliary contact (4a4b), trip signal auxiliary contact OTS (2a2b), door escutcheon, wiring terminal, 220VAC/DC power supply module.

Energizing a world that demands more.

We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable
- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power
- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently
- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

Discover today's Eaton.

Powering Business Worldwide

Eaton's mission is to improve the quality of life and the environment through the use of power management technologies and services. Eaton provides sustainable solutions that help its customers effectively manage electrical and mechanical power – more safely, more efficiently, and more reliably. Eaton's 2020 revenues were \$17.9 billion, and the company sells products to customers in more than 175 countries. Eaton has approximately 85,000 employees.

Eaton began operation in China more than 20 years ago. Since entering the Chinese market in 1993, Eaton's presence has grown significantly in the country. In 2004, Eaton moved its Asia Pacific headquarters from Hong Kong to Shanghai.

In the Greater China region, Eaton has nearly 8,000 employees, 19 manufacturing bases and 5 R&D centers. Today, we make most products for all of Eaton's distinct business here.
